1	Introduction	1
1.1	Scope	1
1.2	Application Backgrounds	1
1.3	Previous Developments	2
1.3.1	For Accelerating Boundary Layers and Film Flow of Newtonian Fluids	2
1.3.2	For Gravity-Driven Film Flow of Non-Newtonian Power-Law Fluids	6
1.4	Recent Development	7
1.4.1	A Novel System of Analysis Models	7
1.4.2	A New Approach for the Treatment of Variable Thermophysical Properties	8
1.4.3	Hydrodynamics and Heat and Mass Transfer	9
1.4.4	Recent Experimental Measurements of Velocity Field in Boundary Layer	12
	References	13

Part I Laminar Free Convection

2	Basic Conservation Equations for Laminar Free Convection	21
2.1	Continuity Equation	22
2.2	Momentum Equation (Navier–Stokes Equations)	24
2.3	Energy Equation	27
2.4	Basic Equations of Free Convection Boundary Layer	30
2.4.1	Continuity Equation	30
2.4.2	Momentum Equations (Navier–Stokes Equations)	31
2.4.3	Energy Equations	34

3	Brief Review of Previous Method for Analysis of Laminar Free Convection	37
3.1	Falkner–Skan Transformation for Fluid Laminar Forced Convection	38
3.2	Falkner–Skan Transformation for Fluid Laminar Free Convection	42
3.2.1	For Boussinesq Approximation	42
3.2.2	Consideration of Variable Thermophysical Properties	44
3.3	Some Previous Methods for Treatment of Variable Thermophysical Properties	45
	References	47
4	Laminar Free Convection of Monatomic and Diatomic Gases, Air, and Water Vapor	49
4.1	Introduction	50
4.2	Governing Partial Differential Equations	51
4.3	Similarity Transformation of the Governing Equations	52
4.3.1	Assumed Dimensionless Variables with Velocity Component Method	52
4.3.2	The Similarity Transformation	53
4.4	Treatment of Variable Thermophysical Properties	58
4.4.1	Temperature Parameters	58
4.4.2	Temperature Parameter Method	62
4.5	Heat Transfer Analysis	64
4.6	Numerical Results	65
4.7	Effect of Variable Thermophysical Properties on Heat Transfer	68
4.8	Summary	70
4.9	Remarks	71
4.10	Calculation Example	73
	References	74
5	Laminar Free Convection of Polyatomic Gas	77
5.1	Introduction	78
5.2	Variable Thermophysical Properties	79
5.3	Governing Partial Differential Equations and their Similarity Transformations	79
5.4	Heat Transfer Analysis	85
5.5	Numerical Solutions	86
5.6	Curve-Fit Formulas for Heat Transfer	88
5.7	Summary	92
5.8	Remarks	92
5.9	Calculation Example	94
	References	95

6	Laminar Free Convection of Liquid	97
6.1	Introduction	98
6.2	Governing Partial Differential Equations and their Similarity Transformation	99
6.2.1	Governing Partial Differential Equations	99
6.2.2	Dimensionless Transformation Variables	100
6.2.3	Similarity Transformation	100
6.2.4	Identical Buoyancy Factor	102
6.3	Treatment of Variable Thermophysical Properties	102
6.4	Heat Transfer Analysis	104
6.5	Numerical Solutions	104
6.6	A Curve-Fit Formula for Heat Transfer	109
6.7	Summary	111
6.8	Remarks	111
6.9	Calculation Examples	113
	References	115
7	Heat Transfer Deviation of Laminar Free Convection Caused by Boussinesq Approximation	117
7.1	Introduction	118
7.2	Governing Equations of Fluid Laminar Free Convection under Boussinesq Approximation	119
7.2.1	For Fluid Laminar Free Convection	119
7.2.2	For Gas Laminar Free Convection	121
7.3	Heat Transfer Deviation of Liquid Laminar Free Convection Caused by Boussinesq Approximation	121
7.3.1	Boussinesq Solutions for Laminar Free Convection	121
7.3.2	Models for Predicted Deviation on Heat Transfer Caused by Boussinesq Approximation	122
7.3.3	Prediction of Heat Transfer Deviation $E_{\alpha_x}^*$ for Water Laminar Free Convection	124
7.4	Heat Transfer Deviation of Gas Laminar Free Convection Caused by Boussinesq Approximation	128
7.4.1	Boussinesq Solutions for Gas Laminar Free Convection	128
7.4.2	Models on Predicted Deviation of Heat Transfer of Gas Laminar Free Convection Caused by Boussinesq Approximation	129
7.4.3	Prediction Results of Deviation $E_{\alpha_x}^*$ for Gas Laminar Free Convection	130
7.5	Summary	134
7.6	Remarks	134
7.7	Calculation example	136
	References	138

8	Experimental Measurements of Free Convection with Large Temperature Difference	139
8.1	Introduction	140
8.2	Experimental Measurements of Velocity Field for Air	
	Laminar Free Convection	141
8.2.1	Experimental Devices and Instruments	141
8.2.2	Measurement Results	143
8.2.3	Governing Equations	143
8.2.4	The Numerical Solutions	146
8.3	Experimental Measurements of Velocity Field for Water Laminar Free Convection	147
8.3.1	Main Experimental Apparatus	147
8.3.2	The Results of Experiment	148
8.3.3	Governing Equations	148
8.3.4	Numerical Solutions	152
8.4	Remarks	153

9	Relationship on Laminar Free Convection and Heat Transfer Between Inclined and Vertical Cases	161
9.1	Introduction	163
9.2	Fluid Free Convection on inclined plate	164
9.2.1	Physical Model and Basic Equations	164
9.2.2	Similarity Transformation of the Basic Equations	165
9.2.3	Relationships of Momentum, Heat, and Mass Transfer between Inclined and Vertical Cases	166
9.3	Gas Free Convection on Inclined Plate	173
9.4	Summary	174
9.5	Remarks	174
9.6	Calculation Example	175
	Appendix A. Derivation of Equations (9.1)–(9.3)	177
1	Derivation of equation (9.1)	177
2	Derivation of equation (9.2)	179
3	Derivation of equation (9.3)	181
	References	182

Part II Film Boiling and Condensation

10	Laminar Film Boiling of Saturated Liquid	187
10.1	Introduction	189
10.2	Governing Partial Differential Equations	190
10.3	Similarity Transformation	191
10.3.1	Similarity Transformation Variables	191
10.3.2	Similarity Transformation	192

10.4	Numerical Calculation	197
10.4.1	Treatment of Variable Thermophysical Properties	197
10.4.2	Numerical Calculation	198
10.4.3	Numerical Results	200
10.5	Heat Transfer	201
10.5.1	Heat Transfer Analysis	201
10.5.2	Curve-fit Equation for Heat Transfer	203
10.6	Mass Transfer	205
10.6.1	Mass Transfer Analysis	205
10.6.2	Curve-Fit Formulae for Mass Transfer	207
10.7	Remarks	207
10.8	Calculation Example	209
	References	213
11	Laminar Film Boiling of Subcooled Liquid	215
11.1	Introduction	216
11.2	Governing Partial Differential Equations	217
11.3	Similarity Transformation	219
11.3.1	Transformation Variables	219
11.3.2	Similarity Transformation	220
11.4	Numerical Calculation	225
11.4.1	Treatment of Variable Thermophysical Properties	225
11.4.2	Numerical Calculation	227
11.5	Heat and Mass transfer	232
11.5.1	Heat Transfer Analysis	232
11.5.2	Curve-Fit Equations for Heat Transfer	233
11.5.3	Mass Transfer Analysis	234
11.6	Summary	238
11.7	Remarks	238
11.8	Calculation Example	243
	References	245
12	Laminar Film Condensation of Saturated Vapor	247
12.1	Introduction	248
12.2	Governing Partial Differential Equations	250
12.3	Similarity Variables	251
12.4	Similarity Transformation of Governing Equations	252
12.5	Numerical Solutions	253
12.5.1	Treatment of Variable Thermophysical Properties	253
12.5.2	Calculation Procedure	255
12.5.3	Solution	255
12.6	Heat and Mass Transfer	256
12.6.1	Analysis for Heat and Mass Transfer	256
12.6.2	Curve-Fit Equations for Heat and Mass Transfer	260
12.7	Remarks	265

12.8 Calculation Example	265
Appendix A. Derivation of Similarity Transformation of Governing Equations (12.1)–(12.5)	270
References	276
13 Effects of Various Physical Conditions on Film Condensations	277
13.1 Introduction	279
13.2 Review of Governing Equations for Film Condensation of Saturated Vapor	280
13.2.1 Partial Differential Equations	280
13.2.2 Similarity Variables	281
13.2.3 Transformed Dimensionless Differential Equations	282
13.3 Different Physical Assumptions	283
13.3.1 Assumption a (with Boussinesq Approximation of Condensate Film)	283
13.3.2 Assumption b (Ignoring Shear Force at Liquid–Vapor Interface)	284
13.3.3 Assumption c (Ignoring Inertia Force of the Condensate Film)	285
13.3.4 Assumption d (Ignoring Thermal Convection of the Condensate Film)	285
13.4 Effects of Various Physical Conditions on Velocity and Temperature Fields	285
13.5 Effects of Various Physical Conditions on Heat Transfer	287
13.6 Effects of Various Physical Conditions on Condensate Film Thickness	288
13.7 Effect of Various Physical Conditions on Mass Flow Rate of the Condensation	293
13.8 Remarks	298
13.8.1 Effects of Boussinesq Approximation	298
13.8.2 Effects of Shear Force at the Liquid–Vapor Interface ...	298
13.8.3 Effect of Inertial Force of the Condensate Film	299
13.8.4 Effects of Thermal Convection of the Condensate Film .	299
References	300
14 Laminar Film Condensation of Superheated Vapor	301
14.1 Introduction	303
14.2 Governing Partial Differential Equations with Two-Phase Film	304
14.3 Similarity Transformation	305
14.3.1 Transformation Variables	305
14.3.2 Ordinary Differential Equations	306
14.4 Treatment of Variable Thermophysical Properties	308
14.5 Numerical Solutions	310
14.5.1 Calculation Procedure	310

14.5.2 Numerical Solution	311
14.6 Heat Transfer	313
14.6.1 Heat Transfer	313
14.7 Condensate Mass Flow Rate	316
14.8 Summary	321
14.9 Remarks	321
14.10 Calculation Example	326
References	329

Part III Falling Film Flow of Non-Newtonian Fluids

15 Hydrodynamics of Falling Film Flow of Non-Newtonian Power-Law Fluids	333
15.1 Principal Types of Power-Law Fluids	334
15.1.1 Newtonian Fluids	334
15.1.2 Power-Law Fluids	334
15.2 Introduction of Studies on Hydrodynamics of Gravity-Driven Film Flow of Non-Newtonian Power-Law Fluids (FFNF)	336
15.3 Physical Model and Governing Partial Differential Equations ..	338
15.4 A New Similarity Transformation	340
15.5 Numerical Solutions	342
15.6 Local Skin-Friction Coefficient	344
15.7 Mass Flow Rate	346
15.8 Length of Boundary Layer Region	348
15.9 Critical Film Thickness	349
15.10 Effect of Wall Inclination	350
15.11 Summary	351
15.12 Remarks	354
15.13 Calculation Example	354
References	358
16 Pseudosimilarity and Boundary Layer Thickness for Non-Newtonian Falling Film Flow	361
16.1 Introduction	362
16.2 Physical Model and Governing Partial Differential Equations ..	363
16.3 Similarity Transformation	365
16.4 Local Prandtl Number	368
16.5 Pseudosimilarity for Energy Equation	369
16.6 Critical Local Prandtl Number	371
16.7 Analysis of Boundary Layer Thickness	372
16.7.1 Precautions for $Pr_x > Pr_x^*$	372
16.7.2 Precautions for $Pr_x < Pr_x^*$	373
16.8 Remarks	375
References	377

17 Heat Transfer of the Falling Film Flow	379
17.1 Introduction	380
17.2 Governing Equations	381
17.3 Heat Transfer Analysis	383
17.4 Numerical Solution for Heat Transfer	385
17.5 Local Similarity vs. Local Pseudosimilarity	389
17.6 Summary	391
17.7 Remarks	391
17.8 Calculation Example	394
References	397
A Tables with Thermophysical Properties	399
