

Contents

1. Introduction	3
1.1 Historical Background	3
1.2 Some Examples of Spectral Methods	7
1.2.1 A Fourier Galerkin Method for the Wave Equation	7
1.2.2 A Chebyshev Collocation Method for the Heat Equation	11
1.2.3 A Legendre Galerkin with Numerical Integration (G-NI) Method for the Advection-Diffusion-Reaction Equation	16
1.2.4 A Legendre Tau Method for the Poisson Equation	21
1.2.5 Basic Aspects of Galerkin, Collocation, G-NI and Tau Methods	24
1.3 Three-Dimensional Applications in Fluids: A Look Ahead	25
2. Polynomial Approximation	39
2.1 The Fourier System	41
2.1.1 The Continuous Fourier Expansion	41
2.1.2 The Discrete Fourier Expansion	47
2.1.3 Differentiation	52
2.1.4 The Gibbs Phenomenon	56
2.2 Orthogonal Polynomials in $(-1, 1)$	68
2.2.1 Sturm-Liouville Problems	68
2.2.2 Orthogonal Systems of Polynomials	69
2.2.3 Gauss-Type Quadratures and Discrete Polynomial Transforms	70
2.3 Legendre Polynomials	75
2.3.1 Basic Formulas	75
2.3.2 Differentiation	77
2.3.3 Orthogonality, Diagonalization and Localization	81
2.4 Chebyshev Polynomials	84
2.4.1 Basic Formulas	84
2.4.2 Differentiation	87
2.5 Jacobi Polynomials	91
2.6 Approximation in Unbounded Domains	93
2.6.1 Laguerre Polynomials and Laguerre Functions	94

2.6.2	Hermite Polynomials and Hermite Functions	95
2.7	Mappings for Unbounded Domains	96
2.7.1	Semi-Infinite Intervals	96
2.7.2	The Real Line	97
2.8	Tensor-Product Expansions	98
2.8.1	Multidimensional Mapping	99
2.9	Expansions on Triangles and Related Domains	103
2.9.1	Collapsed Coordinates and Warped Tensor-Product Expansions	103
2.9.2	Non-Tensor-Product Expansions	110
2.9.3	Mappings	114
3.	Basic Approaches to Constructing Spectral Methods	117
3.1	Burgers Equation	118
3.2	Strong and Weak Formulations of Differential Equations	119
3.3	Spectral Approximation of the Burgers Equation	121
3.3.1	Fourier Galerkin	122
3.3.2	Fourier Collocation	123
3.3.3	Chebyshev Tau	127
3.3.4	Chebyshev Collocation	129
3.3.5	Legendre G-NI	130
3.4	Convolution Sums	132
3.4.1	Transform Methods and Pseudospectral Methods	133
3.4.2	Aliasing Removal by Padding or Truncation	134
3.4.3	Aliasing Removal by Phase Shifts	135
3.4.4	Aliasing Removal for Orthogonal Polynomials	136
3.5	Relation Between Collocation, G-NI and Pseudospectral Methods	138
3.6	Conservation Forms	140
3.7	Scalar Hyperbolic Problems	145
3.7.1	Enforcement of Boundary Conditions	145
3.7.2	Numerical Examples	150
3.8	Matrix Construction for Galerkin and G-NI Methods	154
3.8.1	Matrix Elements	157
3.8.2	An Example of Algebraic Equivalence between G-NI and Collocation Methods	160
3.9	Polar Coordinates	162
3.10	Aliasing Effects	163
4.	Algebraic Systems and Solution Techniques	167
4.1	Ad-hoc Direct Methods	169
4.1.1	Fourier Approximations	170
4.1.2	Chebyshev Tau Approximations	173
4.1.3	Galerkin Approximations	177
4.1.4	Schur Decomposition and Matrix Diagonalization	181

4.2	Direct Methods	186
4.2.1	Tensor Products of Matrices	186
4.2.2	Multidimensional Stiffness and Mass Matrices	187
4.2.3	Gaussian Elimination Techniques	192
4.3	Eigen-Analysis of Spectral Derivative Matrices	195
4.3.1	Second-Derivative Matrices	197
4.3.2	First-Derivative Matrices	200
4.3.3	Advection-Diffusion Matrices	206
4.4	Preconditioning	208
4.4.1	Fundamentals of Iterative Methods for Spectral Discretizations	209
4.4.2	Low-Order Preconditioning of Model Spectral Operators in One Dimension	211
4.4.3	Low-Order Preconditioning in Several Dimensions	227
4.4.4	Spectral Preconditioning	238
4.5	Descent and Krylov Iterative Methods for Spectral Equations	239
4.5.1	Multidimensional Matrix-Vector Multiplication	239
4.5.2	Iterative Methods	241
4.6	Spectral Multigrid Methods	242
4.6.1	One-Dimensional Fourier Multigrid Model Problem ...	243
4.6.2	General Spectral Multigrid Methods	246
4.7	Numerical Examples of Direct and Iterative Methods	251
4.7.1	Fourier Collocation Discretizations	251
4.7.2	Chebyshev Collocation Discretizations	253
4.7.3	Legendre G-NI Discretizations	256
4.7.4	Preconditioners for Legendre G-NI Matrices	259
4.8	Interlude	265
5.	Polynomial Approximation Theory	267
5.1	Fourier Approximation	268
5.1.1	Inverse Inequalities for Trigonometric Polynomials	268
5.1.2	Estimates for the Truncation and Best Approximation Errors	269
5.1.3	Estimates for the Interpolation Error	272
5.2	Sturm-Liouville Expansions	275
5.2.1	Regular Sturm-Liouville Problems	275
5.2.2	Singular Sturm-Liouville Problems	277
5.3	Discrete Norms	279
5.4	Legendre Approximations	281
5.4.1	Inverse Inequalities for Algebraic Polynomials	281
5.4.2	Estimates for the Truncation and Best Approximation Errors	283
5.4.3	Estimates for the Interpolation Error	289
5.4.4	Scaled Estimates	290

5.5	Chebyshev Approximations	292
5.5.1	Inverse Inequalities for Polynomials	292
5.5.2	Estimates for the Truncation and Best Approximation Errors	293
5.5.3	Estimates for the Interpolation Error	296
5.6	Proofs of Some Approximation Results	298
5.7	Other Polynomial Approximations	309
5.7.1	Jacobi Polynomials	309
5.7.2	Laguerre and Hermite Polynomials	310
5.8	Approximation in Cartesian-Product Domains	312
5.8.1	Fourier Approximations	312
5.8.2	Legendre Approximations	314
5.8.3	Mapped Operators and Scaled Estimates	316
5.8.4	Chebyshev and Other Jacobi Approximations	318
5.8.5	Blended Trigonometric and Algebraic Approximations	320
5.9	Approximation in Triangles and Related Domains	323
6.	Theory of Stability and Convergence	327
6.1	Three Elementary Examples Revisited	328
6.1.1	A Fourier Galerkin Method for the Wave Equation ...	328
6.1.2	A Chebyshev Collocation Method for the Heat Equation.....	329
6.1.3	A Legendre Tau Method for the Poisson Equation ...	334
6.2	Towards a General Theory.....	337
6.3	General Formulation of Spectral Approximations to Linear Steady Problems.....	338
6.4	Galerkin, Collocation, G-NI and Tau Methods	344
6.4.1	Galerkin Methods	345
6.4.2	Collocation Methods.....	351
6.4.3	G-NI Methods	360
6.4.4	Tau Methods	367
6.5	General Formulation of Spectral Approximations to Linear Evolution Problems	376
6.5.1	Conditions for Stability and Convergence: The Parabolic Case	378
6.5.2	Conditions for Stability and Convergence: The Hyperbolic Case	384
6.6	The Error Equation.....	396
7.	Analysis of Model Boundary-Value Problems	401
7.1	The Poisson Equation.....	401
7.1.1	Legendre Methods	402
7.1.2	Chebyshev Methods	404
7.1.3	Other Boundary-Value Problems	409
7.2	Singularly Perturbed Elliptic Equations	409

7.2.1	Stabilization of Spectral Methods	413
7.3	The Eigenvalues of Some Spectral Operators	420
7.3.1	The Discrete Eigenvalues for $\mathcal{L}u = -u_{xx}$	420
7.3.2	The Discrete Eigenvalues for $\mathcal{L}u = -\nu u_{xx} + \beta u_x$	424
7.3.3	The Discrete Eigenvalues for $\mathcal{L}u = u_x$	427
7.4	The Preconditioning of Spectral Operators	430
7.5	The Heat Equation	433
7.6	Linear Hyperbolic Equations	439
7.6.1	Periodic Boundary Conditions	439
7.6.2	Nonperiodic Boundary Conditions	445
7.6.3	The Resolution of the Gibbs Phenomenon	447
7.6.4	Spectral Accuracy for Non-Smooth Solutions	454
7.7	Scalar Conservation Laws	459
7.8	The Steady Burgers Equation	463
Appendix A. Basic Mathematical Concepts		471
A.1	Hilbert and Banach Spaces	471
A.2	The Cauchy-Schwarz Inequality	473
A.3	Linear Operators Between Banach Spaces	474
A.4	The Fréchet Derivative of an Operator	475
A.5	The Lax-Milgram Theorem	475
A.6	Dense Subspace of a Normed Space	476
A.7	The Spaces $C^m(\overline{\Omega})$, $m \geq 0$	476
A.8	Functions of Bounded Variation and the Riemann(-Stieltjes) Integral	476
A.9	The Lebesgue Integral and L^p -Spaces	478
A.10	Infinitely Differentiable Functions and Distributions	482
A.11	Sobolev Spaces and Sobolev Norms	484
A.12	The Sobolev Inequality	490
A.13	The Poincaré Inequality	491
A.14	The Hardy Inequality	491
A.15	The Gronwall Lemma	492
Appendix B. Fast Fourier Transforms		493
Appendix C. Iterative Methods for Linear Systems		499
C.1	A Gentle Approach to Iterative Methods	499
C.2	Descent Methods for Symmetric Problems	503
C.3	Krylov Methods for Nonsymmetric Problems	508
Appendix D. Time Discretizations		515
D.1	Notation and Stability Definitions	515
D.2	Standard ODE Methods	519
D.2.1	Leap Frog Method	519
D.2.2	Adams-Bashforth Methods	520

XVIII Contents

D.2.3 Adams-Moulton Methods.....	521
D.2.4 Backwards-Difference Formulas	524
D.2.5 Runge-Kutta Methods	524
D.3 Integrating Factors	525
D.4 Low-Storage Schemes	527
