

Contents

Introduction	1
1 Fourier Series	3
1.1 Fourier Series	3
1.1.1 Even and Odd Functions	3
1.1.2 Definition of the Fourier Series	4
1.1.3 Calculation of the Fourier Coefficients	6
1.1.4 Fourier Series in Complex Notation	11
1.2 Theorems and Rules	13
1.2.1 Linearity Theorem	13
1.2.2 The First Shifting Rule	14
1.2.3 The Second Shifting Rule	17
1.2.4 Scaling Theorem	21
1.3 Partial Sums, Bessel's Inequality, Parseval's Equation	21
1.4 Gibbs' Phenomenon	24
1.4.1 Dirichlet's Integral Kernel	24
1.4.2 Integral Notation of Partial Sums	26
1.4.3 Gibbs' Overshoot	27
Playground	30
2 Continuous Fourier Transformation	33
2.1 Continuous Fourier Transformation	33
2.1.1 Even and Odd Functions	33
2.1.2 The δ -Function	34
2.1.3 Forward and Inverse Transformation	35
2.1.4 Polar Representation of the Fourier Transform	40
2.2 Theorems and Rules	42
2.2.1 Linearity Theorem	42
2.2.2 The First Shifting Rule	42
2.2.3 The Second Shifting Rule	43
2.2.4 Scaling Theorem	44
2.3 Convolution, Cross Correlation, Autocorrelation, Parseval's Theorem	46
2.3.1 Convolution	46
2.3.2 Cross Correlation	55

2.3.3	Autocorrelation	56
2.3.4	Parseval's Theorem	57
2.4	Fourier Transformation of Derivatives	58
2.5	Pitfalls	60
2.5.1	"Turn 1 into 3"	60
2.5.2	Truncation Error	63
	Playground	66
3	Window Functions	69
3.1	The Rectangular Window	69
3.1.1	Zeros	70
3.1.2	Intensity at the Central Peak	70
3.1.3	Sidelobe Suppression	71
3.1.4	3 dB-Bandwidth	72
3.1.5	Asymptotic Behaviour of Sidelobes	73
3.2	The Triangular Window (Fejer Window)	73
3.3	The Cosine Window	74
3.4	The \cos^2 -Window (Hanning)	75
3.5	The Hamming Window	77
3.6	The Triplet Window	78
3.7	The Gauss Window	79
3.8	The Kaiser–Bessel Window	80
3.9	The Blackman–Harris Window	81
3.10	Overview over Window Functions	84
3.11	Windowing or Convolution?	87
	Playground	88
4	Discrete Fourier Transformation	89
4.1	Discrete Fourier Transformation	89
4.1.1	Even and Odd Series and Wrap-around	89
4.1.2	The Kronecker Symbol or the "Discrete δ -Function" ..	90
4.1.3	Definition of the Discrete Fourier Transformation	92
4.2	Theorems and Rules	96
4.2.1	Linearity Theorem	96
4.2.2	The First Shifting Rule	96
4.2.3	The Second Shifting Rule	97
4.2.4	Scaling Rule/Nyquist Frequency	98
4.3	Convolution, Cross Correlation, Autocorrelation, Parseval's Theorem	99
4.3.1	Convolution	100
4.3.2	Cross Correlation	103
4.3.3	Autocorrelation	104
4.3.4	Parseval's Theorem	104
4.4	The Sampling Theorem	105
4.5	Data Mirroring	109

4.6	Zero-padding	112
4.7	Fast Fourier Transformation (FFT)	118
	Playground	126
5	Filter Effect in Digital Data Processing	131
5.1	Transfer Function	131
5.2	Low-pass, High-pass, Band-pass, Notch Filter	132
5.3	Shifting Data	139
5.4	Data Compression	141
5.5	Differentiation of Discrete Data	141
5.6	Integration of Discrete Data	143
	Playground	147
	Appendix: Solutions	149
	References	197
	Index	199

Fourier Transformation for Pedestrians

Butz, T.

2006, XIV, 202 p., Hardcover

ISBN: 978-3-540-23165-3
