
List of Contents

The Regulation of Chromatin and DNA-Methylation Patterns in Blood Cell Development	1
<i>C. Bonifer, P. Lefevre, and H. Tagoh</i>	
Methylation Dynamics in the Early Mammalian Embryo: Implications of Genome Reprogramming Defects for Development	13
<i>T. Haaf</i>	
Epigenetic Regulation in <i>Drosophila</i>	23
<i>F. Lyko, C. Beisel, J. Marhold, and R. Paro</i>	
Epimutations in Human Disease	45
<i>B. Horsthemke</i>	
Epigenotypes of Latent Herpesvirus Genomes	61
<i>J. Minarovits</i>	
Epigenetics of Complex Diseases: From General Theory to Laboratory Experiments	81
<i>A. Schumacher and A. Petronis</i>	
MSL Proteins and the Regulation of Gene Expression	117
<i>S. Rea and A. Akhtar</i>	
DNA Methylation Profiles of Female Steroid Hormone-Driven Human Malignancies	141
<i>M. Campan, D. J. Weisenberger, and P. W. Laird</i>	
Genome-wide Analysis of DNA Methylation Changes in Human Malignancies . .	179
<i>C. Plass and D. J. Smiraglia</i>	
Decreased Fidelity in Replicating DNA Methylation Patterns in Cancer Cells Leads to Dense Methylation of a CpG Island	199
<i>N. Watanabe, E. Okochi-Takada, Y. Yagi, J.-I. Furuta, and T. Ushijima</i>	

Methylation of Endogenous Human Retroelements in Health and Disease	211
<i>W. A. Schulz, C. Steinhoff, and A. R. Florl</i>	
Cancer-Linked DNA Hypomethylation and Its Relationship to Hypermethylation	251
<i>M. Ehrlich</i>	
Subject Index	275

DNA Methylation: Development, Genetic Disease and
Cancer

Doerfler, W.; Böhm, P. (Eds.)

2006, IX, 284 p., Hardcover

ISBN: 978-3-540-31180-5
