
Contents

Invariance Principles with Logarithmic Averaging for Ergodic Simulations

Olivier Bardou 1

Technical Analysis Techniques versus Mathematical Models: Boundaries of Their Validity Domains

*Christophette Blanchet-Scalliet, Awa Diop, Rajna Gibson, Denis Talay,
Etienne Tanré* 15

Weak Approximation of Stopped Diffusions

F.M. Buchmann, W.P. Petersen 31

Approximation of Stochastic Programming Problems

Christine Choirat, Christian Hess, Raffaello Seri 45

The Asymptotic Distribution of Quadratic Discrepancies

Christine Choirat, Raffaello Seri 61

Weighted Star Discrepancy of Digital Nets in Prime Bases

Josef Dick, Harald Niederreiter, Friedrich Pillichshammer 77

Explaining Effective Low-Dimensionality

Andrew Dickinson 97

Selection Criteria for (Random) Generation of Digital (0,s)-Sequences

Henri Faure 113

Imaging of a Dissipative Layer in a Random Medium Using a Time Reversal Method

Jean-Pierre Fouque, Josselin Garnier, André Nachbin, Knut Sølna 127

VIII Contents

A Stochastic Numerical Method for Diffusion Equations and Applications to Spatially Inhomogeneous Coagulation Processes <i>Flavius Guías</i>	147
Non-Uniform Low-Discrepancy Sequence Generation and Integration of Singular Integrands <i>Jürgen Hartinger, Reinhold Kainhofer</i>	163
Construction of Good Rank-1 Lattice Rules Based on the Weighted Star Discrepancy <i>Stephen Joe</i>	181
Probabilistic Approximation via Spatial Derivation of Some Nonlinear Parabolic Evolution Equations <i>B. Jourdain</i>	197
Myths of Computer Graphics <i>Alexander Keller</i>	217
Illumination in the Presence of Weak Singularities <i>Thomas Kollig, Alexander Keller</i>	245
Irradiance Filtering for Monte Carlo Ray Tracing <i>Janne Kontkanen, Jussi Räsänen, Alexander Keller</i>	259
On the Star Discrepancy of Digital Nets and Sequences in Three Dimensions <i>Peter Kritzer</i>	273
Lattice Rules for Multivariate Approximation in the Worst Case Setting <i>Frances Y. Kuo, Ian H. Sloan, Henryk Woźniakowski</i>	289
Randomized Quasi-Monte Carlo Simulation of Markov Chains with an Ordered State Space <i>Pierre L'Ecuyer, Christian Lécot, Bruno Tuffin</i>	331
Experimental Designs Using Digital Nets with Small Numbers of Points <i>Kwong-Ip Liu, Fred J. Hickernell</i>	343
Concentration Inequalities for Euler Schemes <i>Florent Malrieu, Denis Talay</i>	355
Fast Component-by-Component Construction, a Reprise for Different Kernels <i>Dirk Nuyens, Ronald Cools</i>	373

A Reversible Jump MCMC Sampler for Object Detection in Image Processing <i>Mathias Ortner, Xavier Descombes, Josiane Zerubia</i>	389
Quasi-Monte Carlo for Integrands with Point Singularities at Unknown Locations <i>Art B. Owen</i>	403
Infinite-Dimensional Highly-Uniform Point Sets Defined via Linear Recurrences in \mathbb{F}_{2^w} <i>François Panneton, Pierre L'Ecuyer</i>	419
Monte Carlo Studies of Effective Diffusivities for Inertial Particles <i>G.A. Pavliotis, A.M. Stuart, L. Band</i>	431
An Adaptive Importance Sampling Technique <i>Teemu Pennanen, Matti Koivu</i>	443
MinT: A Database for Optimal Net Parameters <i>Rudolf Schürer, Wolfgang Ch. Schmid</i>	457
On Ergodic Measures for McKean–Vlasov Stochastic Equations <i>A. Yu. Veretennikov</i>	471
On the Distribution of Some New Explicit Inversive Pseudorandom Numbers and Vectors <i>Arne Winterhof</i>	487
Error Analysis of Splines for Periodic Problems Using Lattice Designs <i>Xiaoyan Zeng, King-Tai Leung, Fred J. Hickernell</i>	501
