List of symbols	XIII
Foreword	XVII
1 Fundamentals of thermodynamics	1
1.1 Phases	1
1.2 System, state and state variables	2
1.3 What is chemical potential?	4
1.4 What is entropy?	4
1.5 Laws of thermodynamics	5
1.6 Reversible processes, volume work and surface work	7
1.7 Why is volume work not always $P\Delta V$?	9
1.8 Fundamental equation	10
1.9 Gibbs-Duhem and Gibbs adsorption equation	12
Problems	13
2 Phase equilibrium	15
2.1 Phase equilibrium for a flat surface	15
2.2 Phase equilibrium for a spherical surface	19
2.3 Gibbs phase rule	21
2.4 Phase diagrams	22
2.5 Saturation ratio and activities	23
2.5.1 Pure liquids	23
2.5.2 Liquid solution	24
2.6 Conventional form of the gas-liquid equilibrium conditions	27
2.7 Summary of equilibrium conditions for spherical droplets	31
2.8 Van der Waals fluid	32
Problems	38

3	Formation free energy	41
3.1	Maxwell equations	47
3.2	Free energy. Free for what?	49
3.3	Free energy diagrams	50
3.4	Free energy change in droplet formation	50
3.5	Classical droplet model	55
3.6	Surface of tension	57
3.7	Equimolar surface and size dependence of surface tension	59
3.8	Conventional form of droplet formation free energy	61
3.9	One-component case	62
3.10	Treating non-equilibrium clusters	65
3.11	Free energy barrier in the Ising model	67
3.12	Multicomponent case	68
3.13	Consistency issues	74
3.14	Summary of free energies for droplet formation	74
	Problems	75
4	Equilibrium cluster distribution	77
	Problems	84
5	Nucleation kinetics	85
5.1	One-component steady-state nucleation	89
5.2	1/S factor	96
5.3	Two-component steady-state nucleation	97
5.4	Usual formula for binary rate	110
5.5	Comparison of classical theory predictions with experimental results	113
	Problems	115
6	Nucleation theorems	119
6.1	First nucleation theorem	122
6.2	Activity plots	124
6.3	Clausius-Clapeyron equation and the order of phase transition	125
6.4	Second nucleation theorem	128
	Problems	133
7	Basics of heterogeneous nucleation	135
7.1	Free energy and geometric relations	136
7.1.1	Flat pre-existing surface	143
7.2	Nucleation rate	144
7.2.1	Concentration of adsorbed monomers	145
7.2.2	Growth coefficients	146
7.2.3	Units of nucleation rate and nucleation probability	146
7.2.4	One-component case	147

7.3	Heterogeneous nucleation theorems	149
	Problems	150
8	Beyond the classical theory	153
8.1	Improved classical theories	153
8.2	Scaling theories	153
8.3	The density functional theory	154
8.4	The diffuse interface theory	155
8.5	Molecular simulations	155
8.5.1	Interaction potentials	155
8.5.2	Extent of system studied	156
8.5.3	Simulation methods	157
8.5.4	Examples of nucleation studies with molecular methods	158
	Summary	161
	References	163
	Index	175

Classical Nucleation Theory in Multicomponent Systems

Vehkamäki, H.

2006, XX, 188 p. 62 illus., Hardcover

ISBN: 978-3-540-29213-5
