## Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
<b>2</b>	<b>Prerequisites</b>	<b>9</b>
2.1	Problem Types	10
2.1.1	Optimization Problems	10
2.1.2	Classification Problems	13
2.1.3	Reinforcement Learning Problems	15
2.2	Reinforcement Learning	18
2.2.1	Model-Free Reinforcement Learning	18
2.2.2	Model-Based Reinforcement Learning	21
2.3	Genetic Algorithms	21
2.3.1	Basic Genetic Algorithm	22
2.3.2	Facetwise GA Theory	22
2.3.3	Selection and Replacement Techniques	23
2.3.4	Adding Mutation and Recombination	26
2.3.5	Component Interaction	28
2.4	Summary and Conclusions	28
<b>3</b>	<b>Simple Learning Classifier Systems</b>	<b>31</b>
3.1	Learning Architecture	32
3.1.1	Knowledge Representation	32
3.1.2	Reinforcement Learning Component	34
3.1.3	Evolutionary Component	35
3.2	Simple LCS at Work	36
3.3	Towards a Facetwise LCS Theory	37
3.3.1	Problem Solutions and Fitness Guidance	38
3.3.2	General Problem Solutions	39
3.3.3	Growth of Promising Subsolutions	40
3.3.4	Neighborhood Search	41
3.3.5	Solution Sustenance	47
3.3.6	Additional Multistep Challenges	47

## XVIII Contents

3.3.7	Facetwise LCS Theory .....	48
3.4	Summary and Conclusions .....	49
<b>4</b>	<b>The XCS Classifier System .....</b>	<b>51</b>
4.1	System Introduction .....	51
4.1.1	Knowledge Representation .....	52
4.1.2	Learning Interaction .....	52
4.1.3	Rule Evaluation .....	53
4.1.4	Rule Evolution .....	56
4.1.5	XCS Learning Intuition .....	57
4.2	Simple XCS Applications .....	58
4.2.1	Simple Classification Problem .....	58
4.2.2	Performance in Maze 1 .....	61
4.3	Summary and Conclusions .....	63
<b>5</b>	<b>How XCS Works: Ensuring Effective Evolutionary Pressures .....</b>	<b>65</b>
5.1	Evolutionary Pressures in XCS .....	66
5.1.1	Semantic Generalization due to Set Pressure .....	67
5.1.2	Mutation's Influence .....	69
5.1.3	Deletion Pressure .....	70
5.1.4	Subsumption Pressure .....	70
5.1.5	Fitness Pressure .....	71
5.1.6	Pressure Interaction .....	72
5.1.7	Validation of the Specificity Equation .....	73
5.2	Improving Fitness Pressure .....	80
5.2.1	Proportionate vs. Tournament Selection .....	81
5.2.2	Limitations of Proportionate Selection .....	82
5.2.3	Tournament Selection .....	84
5.3	Summary and Conclusions .....	88
<b>6</b>	<b>When XCS Works: Towards Computational Complexity ...</b>	<b>91</b>
6.1	Proper Population Initialization: The Covering Bound .....	92
6.2	Ensuring Supply: The Schema Bound .....	94
6.2.1	Population Size Bound .....	95
6.2.2	Specificity Bound .....	96
6.2.3	Extension in Time .....	97
6.3	Making Time for Growth: The Reproductive Opportunity Bound .....	98
6.3.1	General Population Size Bound .....	98
6.3.2	General Reproductive Opportunity Bound .....	100
6.3.3	Sufficiently Accurate Values .....	102
6.3.4	Bound Verification .....	103
6.4	Estimating Learning Time .....	103
6.4.1	Time Bound Derivation .....	104

6.4.2	Experimental Validation .....	106
6.5	Assuring Solution Sustenance: The Niche Support Bound .....	108
6.5.1	Markov Chain Model .....	109
6.5.2	Steady State Derivation .....	111
6.5.3	Evaluation of Niche Support Distribution .....	112
6.5.4	Population Size Bound .....	116
6.6	Towards PAC Learnability .....	117
6.6.1	Problem Bounds Revisited .....	118
6.6.2	PAC-Learning with XCS .....	120
6.7	Summary and Conclusions .....	121
<b>7</b>	<b>Effective XCS Search: Building Block Processing .....</b>	<b>123</b>
7.1	Building Block Hard Problems .....	124
7.1.1	Fitness Guidance Exhibited .....	125
7.1.2	Building Blocks in Classification Problems .....	126
7.1.3	The Need for Effective BB Processing .....	128
7.2	Building Block Identification and Processing .....	130
7.2.1	Structure Identification Mechanisms .....	132
7.2.2	BB-Identification in the ECGA .....	132
7.2.3	BB-Identification in BOA .....	134
7.2.4	Learning Dependency Structures in XCS .....	137
7.2.5	Sampling from the Learned Dependency Structures ....	138
7.2.6	Experimental Evaluation .....	141
7.3	Summary and Conclusions .....	144
<b>8</b>	<b>XCS in Binary Classification Problems .....</b>	<b>147</b>
8.1	Multiplexer Problem Analyses .....	147
8.1.1	Large Multiplexer Problems .....	148
8.1.2	Very Noisy Problems .....	150
8.2	The xy-Biased Multiplexer .....	151
8.3	Count Ones Problems .....	152
8.4	Summary and Conclusions .....	154
<b>9</b>	<b>XCS in Multi-Valued Problems .....</b>	<b>157</b>
9.1	XCS with Hyperrectangular Conditions .....	158
9.2	Theory Modifications .....	159
9.2.1	Evolutionary Pressure Adjustment .....	159
9.2.2	Population Initialization: Covering Bound .....	160
9.2.3	Schema Supply and Growth: Schema and Reproductive Opportunity Bound .....	160
9.2.4	Solution Sustenance: Niche Frequencies .....	162
9.2.5	Obliqueness .....	162
9.3	Datamining .....	163
9.3.1	Datasets .....	163
9.3.2	Results .....	165

9.4	Function Approximation .....	169
9.4.1	Hyperellipsoidal Conditions .....	169
9.4.2	Performance Comparisons .....	172
9.5	Summary and Conclusions .....	178
<b>10</b>	<b>XCS in Reinforcement Learning Problems .....</b>	<b>181</b>
10.1	Q-learning and Generalization .....	182
10.2	Ensuring Accurate Reward Propagation:	
	XCS with Gradient Descent .....	184
10.2.1	Q-Value Estimations and Update Mechanisms .....	184
10.2.2	Adding Gradient Descent to XCS .....	185
10.3	Experimental Validation .....	186
10.3.1	Multistep Maze Problems .....	187
10.3.2	Blocks-World Problems .....	192
10.4	Summary and Conclusions .....	194
<b>11</b>	<b>Facetwise LCS Design .....</b>	<b>197</b>
11.1	Which Fitness for Which Solution? .....	197
11.2	Parameter Estimation .....	198
11.3	Generalization Mechanisms .....	200
11.4	Which Selection For Solution Growth? .....	202
11.5	Niching for Solution Sustenance .....	203
11.6	Effective Evolutionary Search .....	204
11.7	Different Condition Structures .....	205
11.8	Summary and Conclusions .....	206
<b>12</b>	<b>Towards Cognitive Learning Classifier Systems .....</b>	<b>207</b>
12.1	Predictive and Associative Representations .....	208
12.2	Incremental Learning .....	210
12.3	Hierarchical Architectures .....	212
12.4	Anticipatory Behavior .....	214
12.5	Summary and Conclusions .....	216
<b>13</b>	<b>Summary and Conclusions .....</b>	<b>219</b>
13.1	Summary .....	219
13.2	Conclusions .....	223
<b>A</b>	<b>Notation and Parameters .....</b>	<b>227</b>
<b>B</b>	<b>Algorithmic Description .....</b>	<b>231</b>
<b>C</b>	<b>Boolean Function Problems .....</b>	<b>243</b>
	Multiplexer .....	243
	Layered Multiplexer .....	244
	xy-Biased Multiplexer .....	244
	Hidden Parity .....	245

Count Ones .....	246
Layered Count Ones.....	246
Carry Problem .....	247
Hierarchically Composed Problems .....	248
<b>References</b> .....	249
<b>Index</b> .....	263

Rule-Based Evolutionary Online Learning Systems  
A Principled Approach to LCS Analysis and Design

Butz, M.V.

2006, XXI, 259 p., Hardcover

ISBN: 978-3-540-25379-2
