## Volume I Basic Theory

---

<b>1</b>	<b>Generalized Differentiation in Banach Spaces</b>	<b>3</b>
1.1	Generalized Normals to Nonconvex Sets	4
1.1.1	Basic Definitions and Some Properties	4
1.1.2	Tangential Approximations	12
1.1.3	Calculus of Generalized Normals	18
1.1.4	Sequential Normal Compactness of Sets	27
1.1.5	Variational Descriptions and Minimality	33
1.2	Coderivatives of Set-Valued Mappings	39
1.2.1	Basic Definitions and Representations	40
1.2.2	Lipschitzian Properties	47
1.2.3	Metric Regularity and Covering	56
1.2.4	Calculus of Coderivatives in Banach Spaces	70
1.2.5	Sequential Normal Compactness of Mappings	75
1.3	Subdifferentials of Nonsmooth Functions	81
1.3.1	Basic Definitions and Relationships	82
1.3.2	Fréchet-Like $\varepsilon$ -Subgradients and Limiting Representations	87
1.3.3	Subdifferentiation of Distance Functions	97
1.3.4	Subdifferential Calculus in Banach Spaces	112
1.3.5	Second-Order Subdifferentials	121
1.4	Commentary to Chap. 1	132
<b>2</b>	<b>Extremal Principle in Variational Analysis</b>	<b>171</b>
2.1	Set Extremality and Nonconvex Separation	172
2.1.1	Extremal Systems of Sets	172
2.1.2	Versions of the Extremal Principle and Supporting Properties	174
2.1.3	Extremal Principle in Finite Dimensions	178
2.2	Extremal Principle in Asplund Spaces	180

2.2.1	Approximate Extremal Principle in Smooth Banach Spaces .....	180
2.2.2	Separable Reduction .....	183
2.2.3	Extremal Characterizations of Asplund Spaces .....	195
2.3	Relations with Variational Principles .....	203
2.3.1	Ekeland Variational Principle .....	204
2.3.2	Subdifferential Variational Principles .....	206
2.3.3	Smooth Variational Principles .....	210
2.4	Representations and Characterizations in Asplund Spaces ....	214
2.4.1	Subgradients, Normals, and Coderivatives in Asplund Spaces .....	214
2.4.2	Representations of Singular Subgradients and Horizontal Normals to Graphs and Epigraphs ....	223
2.5	Versions of Extremal Principle in Banach Spaces .....	230
2.5.1	Axiomatic Normal and Subdifferential Structures .....	231
2.5.2	Specific Normal and Subdifferential Structures .....	235
2.5.3	Abstract Versions of Extremal Principle .....	245
2.6	Commentary to Chap. 2 .....	249
<b>3</b>	<b>Full Calculus in Asplund Spaces .....</b>	<b>261</b>
3.1	Calculus Rules for Normals and Coderivatives .....	261
3.1.1	Calculus of Normal Cones .....	262
3.1.2	Calculus of Coderivatives .....	274
3.1.3	Strictly Lipschitzian Behavior and Coderivative Scalarization .....	287
3.2	Subdifferential Calculus and Related Topics .....	296
3.2.1	Calculus Rules for Basic and Singular Subgradients ....	296
3.2.2	Approximate Mean Value Theorem with Some Applications .....	308
3.2.3	Connections with Other Subdifferentials .....	317
3.2.4	Graphical Regularity of Lipschitzian Mappings .....	327
3.2.5	Second-Order Subdifferential Calculus .....	335
3.3	SNC Calculus for Sets and Mappings .....	341
3.3.1	Sequential Normal Compactness of Set Intersections and Inverse Images .....	341
3.3.2	Sequential Normal Compactness for Sums and Related Operations with Maps .....	349
3.3.3	Sequential Normal Compactness for Compositions of Maps .....	354
3.4	Commentary to Chap. 3 .....	361
<b>4</b>	<b>Characterizations of Well-Posedness and Sensitivity Analysis .....</b>	<b>377</b>
4.1	Neighborhood Criteria and Exact Bounds .....	378
4.1.1	Neighborhood Characterizations of Covering .....	378

4.1.2	Neighborhood Characterizations of Metric Regularity and Lipschitzian Behavior .....	382
4.2	Pointbased Characterizations .....	384
4.2.1	Lipschitzian Properties via Normal and Mixed Coderivatives .....	385
4.2.2	Pointbased Characterizations of Covering and Metric Regularity .....	394
4.2.3	Metric Regularity under Perturbations .....	399
4.3	Sensitivity Analysis for Constraint Systems .....	406
4.3.1	Coderivatives of Parametric Constraint Systems .....	407
4.3.2	Lipschitzian Stability of Constraint Systems .....	414
4.4	Sensitivity Analysis for Variational Systems .....	421
4.4.1	Coderivatives of Parametric Variational Systems .....	422
4.4.2	Coderivative Analysis of Lipschitzian Stability .....	436
4.4.3	Lipschitzian Stability under Canonical Perturbations ..	450
4.5	Commentary to Chap. 4 .....	462

---

## Volume II Applications

---

<b>5</b>	<b>Constrained Optimization and Equilibria .....</b>	<b>3</b>
5.1	Necessary Conditions in Mathematical Programming .....	3
5.1.1	Minimization Problems with Geometric Constraints ...	4
5.1.2	Necessary Conditions under Operator Constraints .....	9
5.1.3	Necessary Conditions under Functional Constraints ....	22
5.1.4	Suboptimality Conditions for Constrained Problems ...	41
5.2	Mathematical Programs with Equilibrium Constraints .....	46
5.2.1	Necessary Conditions for Abstract MPECs .....	47
5.2.2	Variational Systems as Equilibrium Constraints .....	51
5.2.3	Refined Lower Subdifferential Conditions for MPECs via Exact Penalization .....	61
5.3	Multiobjective Optimization .....	69
5.3.1	Optimal Solutions to Multiobjective Problems .....	70
5.3.2	Generalized Order Optimality .....	73
5.3.3	Extremal Principle for Set-Valued Mappings .....	83
5.3.4	Optimality Conditions with Respect to Closed Preferences .....	92
5.3.5	Multiobjective Optimization with Equilibrium Constraints .....	99
5.4	Subextremality and Suboptimality at Linear Rate .....	109
5.4.1	Linear Subextremality of Set Systems .....	110
5.4.2	Linear Suboptimality in Multiobjective Optimization ..	115
5.4.3	Linear Suboptimality for Minimization Problems .....	125
5.5	Commentary to Chap. 5 .....	131

<b>6</b>	<b>Optimal Control of Evolution Systems in Banach Spaces</b>	159
6.1	Optimal Control of Discrete-Time and Continuous-time Evolution Inclusions	160
6.1.1	Differential Inclusions and Their Discrete Approximations	160
6.1.2	Bolza Problem for Differential Inclusions and Relaxation Stability	168
6.1.3	Well-Posed Discrete Approximations of the Bolza Problem	175
6.1.4	Necessary Optimality Conditions for Discrete-Time Inclusions	184
6.1.5	Euler-Lagrange Conditions for Relaxed Minimizers	198
6.2	Necessary Optimality Conditions for Differential Inclusions without Relaxation	210
6.2.1	Euler-Lagrange and Maximum Conditions for Intermediate Local Minimizers	211
6.2.2	Discussion and Examples	219
6.3	Maximum Principle for Continuous-Time Systems with Smooth Dynamics	227
6.3.1	Formulation and Discussion of Main Results	228
6.3.2	Maximum Principle for Free-Endpoint Problems	234
6.3.3	Transversality Conditions for Problems with Inequality Constraints	239
6.3.4	Transversality Conditions for Problems with Equality Constraints	244
6.4	Approximate Maximum Principle in Optimal Control	248
6.4.1	Exact and Approximate Maximum Principles for Discrete-Time Control Systems	248
6.4.2	Uniformly Upper Subdifferentiable Functions	254
6.4.3	Approximate Maximum Principle for Free-Endpoint Control Systems	258
6.4.4	Approximate Maximum Principle under Endpoint Constraints: Positive and Negative Statements	268
6.4.5	Approximate Maximum Principle under Endpoint Constraints: Proofs and Applications	276
6.4.6	Control Systems with Delays and of Neutral Type	290
6.5	Commentary to Chap. 6	297
<b>7</b>	<b>Optimal Control of Distributed Systems</b>	335
7.1	Optimization of Differential-Algebraic Inclusions with Delays	336
7.1.1	Discrete Approximations of Differential-Algebraic Inclusions	338
7.1.2	Strong Convergence of Discrete Approximations	346

7.1.3	Necessary Optimality Conditions for Difference-Algebraic Systems .....	352
7.1.4	Euler-Lagrange and Hamiltonian Conditions for Differential-Algebraic Systems .....	357
7.2	Neumann Boundary Control of Semilinear Constrained Hyperbolic Equations .....	364
7.2.1	Problem Formulation and Necessary Optimality Conditions for Neumann Boundary Controls .....	365
7.2.2	Analysis of State and Adjoint Systems in the Neumann Problem .....	369
7.2.3	Needle-Type Variations and Increment Formula .....	376
7.2.4	Proof of Necessary Optimality Conditions .....	380
7.3	Dirichlet Boundary Control of Linear Constrained Hyperbolic Equations .....	386
7.3.1	Problem Formulation and Main Results for Dirichlet Controls .....	387
7.3.2	Existence of Dirichlet Optimal Controls .....	390
7.3.3	Adjoint System in the Dirichlet Problem .....	391
7.3.4	Proof of Optimality Conditions .....	395
7.4	Minimax Control of Parabolic Systems with Pointwise State Constraints .....	398
7.4.1	Problem Formulation and Splitting .....	400
7.4.2	Properties of Mild Solutions and Minimax Existence Theorem .....	404
7.4.3	Suboptimality Conditions for Worst Perturbations .....	410
7.4.4	Suboptimal Controls under Worst Perturbations .....	422
7.4.5	Necessary Optimality Conditions under State Constraints .....	427
7.5	Commentary to Chap. 7 .....	439
<b>8</b>	<b>Applications to Economics .....</b>	<b>461</b>
8.1	Models of Welfare Economics .....	461
8.1.1	Basic Concepts and Model Description .....	462
8.1.2	Net Demand Qualification Conditions for Pareto and Weak Pareto Optimal Allocations .....	465
8.2	Second Welfare Theorem for Nonconvex Economies .....	468
8.2.1	Approximate Versions of Second Welfare Theorem .....	469
8.2.2	Exact Versions of Second Welfare Theorem .....	474
8.3	Nonconvex Economies with Ordered Commodity Spaces .....	477
8.3.1	Positive Marginal Prices .....	477
8.3.2	Enhanced Results for Strong Pareto Optimality .....	479
8.4	Abstract Versions and Further Extensions .....	484
8.4.1	Abstract Versions of Second Welfare Theorem .....	484
8.4.2	Public Goods and Restriction on Exchange .....	490
8.5	Commentary to Chap. 8 .....	492

**References** ..... 477

**List of Statements** ..... 543

**Glossary of Notation** ..... 565

**Subject Index** ..... 569

Variational Analysis and Generalized Differentiation I

Basic Theory

Mordukhovich, B.S.

2006, XXII, 579 p., Hardcover

ISBN: 978-3-540-25437-9
