

Contents

1	Introduction and Factors Influencing the Seasonal Growth of Trees	1
1.1	Introduction	1
1.1.1	Perspective	1
1.1.2	The Structure of This Book	2
1.2	The Environment and Tree-Ring Formation	2
1.3	Internal Factors	3
1.4	Physical–Geographical Factors	12
1.5	Soil Factors	15
1.6	Weather Factors	19
1.7	Conclusions and Discussion	19
2	Tree-Ring Structure in Conifers as an Image of Growth Conditions	21
2.1	Introduction	21
2.2	The Structure of Conifer Tree Rings and its Measurement	22
2.2.1	Measurement of Tree-Ring Width	24
2.2.2	Measurement of Wood Density Within Tree Rings	28
2.2.3	Measurement of Radial Tracheid Diameter Within Tree-Rings (Tracheidograms)	33
2.3	Influence of Internal Factors on Tree-Ring Structure in Conifers	38
2.4	Influence of External Factors on Tree-Ring Structure in Conifers	40
2.4.1	Light (Intensity and Photoperiod)	43
2.4.2	Temperature	45
2.4.3	Water	47
2.4.4	Some Other Factors	53

2.5	Deriving Chronologies for Parameters of Tree-Ring Structure	58
2.5.1	Variability of Radial Cell Sizes, Cell Wall Thickness, and Wood Density Within Tree Rings	58
2.5.2	Acquisition and Statistical Characteristics of "Cell Chronologies"	60
2.6	Long-Term Relations Between Different Anatomical Characteristics of Tree Rings	64
2.7	Conclusions and Discussion	69
3	Seasonal Cambium Activity and Production of New Xylem Cells	71
3.1	Introduction	71
3.2	Seasonal Activity of Cambium and Xylem Differentiation (Basic Definitions)	72
3.3	Methods for Studying Seasonal Kinetics of Tree-Ring Growth and the Formation of Their Structure	74
3.4	Cell Organization of the Cambial Zone	78
3.5	Seasonal Activity of the Cambial Zone (Basic Quantitative Results)	81
3.6	A Phenomenological Approach to the Description of the Observed Patterns of Cambial Activity	89
3.7	Control of the Important Kinetic Parameters of the Cambial Zone for Cell Production	101
3.8	Conclusions and Discussion	103
4	Radial Cell Enlargement	105
4.1	Introduction	105
4.2	Cell Expansion and Associated Processes	106
4.3	Methods to Study the Kinetics of Cell Enlargement and the Main Results	106
4.4	Results Confirming the Relationship Between the Rate of Division and Tracheid Expansion	111
4.4.1	Direct Comparison of Radial Growth Rate and Radial Tracheid Dimension	111
4.4.2	High Frequency Variations of Radial Tracheid Dimension in Conifers	112
4.4.3	Indirect Evidence for a Relationship Between the Rate of Cell Division in the Cambial Zone and Cell Expansion	122

4.5	Some Consequences of the Relationship Between Growth Rate and Radial Tracheid Dimension . . .	128
4.6	Conclusions and Discussion	131
5	Cell Wall Thickening	135
5.1	Introduction	135
5.2	Seasonal Course of Cell Wall Thickening (Process and Basic Results)	136
5.3	Formation of Compression Wood in Experiments with Inclination	139
5.4	Relationship Between Radial Tracheid Dimension and Cell Wall Thickness	143
5.5	Conclusions and Discussion	147
6	Environmental Control of Xylem Differentiation	151
6.1	Introduction	151
6.2	Conceptual Scheme of the Environmental Control of Xylem Differentiation	152
6.3	Tree-Ring Formation Under Strong Temperature Limitation (Northern Timberline)	154
6.4	“Differential Tracheidograms” in the Analysis of Weather Conditions Within a Season	169
6.5	Tree-Ring Anatomy as an Indicator of Climate – Seasonal Growth Relations in a Monsoon Region – an Example of Growth Limitation by High Temperatures and Intra-Seasonal Drought	173
6.6	Conclusions and Discussion	186
7	Modeling External Influence on Xylem Development	189
7.1	Introduction	189
7.2	Statistical Models in Dendroclimatology and Dendroecology: Their Advantages and Limitations . . .	191
7.3	Mechanistic (Simulation) Models of Xylem Development . .	200
7.3.1	Wilson and Howard’s Computer Model for Cambial Activity	200
7.3.2	Stevens’s Model with Slight Modifications	207
7.4	The Vaganov–Shashkin Simulation Model of Seasonal Growth and Tree-Ring Formation	208

\$		Contents
7.4.1	Growth Rate Dependence on Current Climatic Conditions	211
7.4.2	Modeling of Cell Growth Within the Cambial Zone and Production of New Xylem Cells	214
7.4.3	Calculation of Radial Tracheid Dimension and Cell Wall Thickness	216
7.5	Description of Model Parameters	218
7.6	An Example of Model Application	220
7.6.1	Tree Growth and Formation of Annual Rings Near the Polar Timberline	220
7.6.2	Examples of Modeling of Seasonal Growth and Formation of Tree Rings in the Middle Taiga Zone	223
7.6.3	Simulation of Annual Tree Growth and Tree-Ring Formation in Trees Growing in the Steppe Zone	226
7.6.4	Seasonal Growth and Formation of “False Rings” Modeled in Conifer Trees Growing in a Semi-Arid Climate	232
7.6.5	Modeled Differences in Growth Response to Soil Moisture and High-Temperature Limitation of Conifer Species Growing in a Monsoon Climate	236
7.7	Conclusions and Discussion	243
8	Simulation of Tree-Ring Growth Dynamics in Varying and Changing Climates	245
8.1	Introduction	245
8.2	Time-Dependent Changes in Response of Growth Rate to Climatic Variations	246
8.3	Application of the Vaganov–Shashkin Simulation Model to a Wide Range of Species and Site Conditions	249
8.4	Parameters of the Model and Its Relation to Species, Age and Site Characteristics	252
8.4.1	Age	252
8.4.2	Species and Site Characteristics	253
8.4.2.1	An Example from an Extreme Environment	254
8.5	Examples of the Simulation of Tree-Ring Growth Dynamics in Temperature-Limited Conditions Under Projected Climate Scenarios	257
8.6	Examples of the Simulation of Tree-Ring Growth Dynamics in Temperature-Limited and Low Precipitation Conditions Under Projected Climate Scenarios	262
8.7	Examples of the Simulation of Tree-Ring Growth Dynamics in Water-Limited Conditions Under Projected Climate Scenarios: Comparison of Two Species	266
8.8	Simulation of Longer-Term Variations	

Contents		XI
	in Tree-Ring Dynamics in Dry Conditions	270
8.9	On the Use of Forward and Inverse Models in Climate Reconstruction	271
8.10	On the Use of the Forward Model in the Interpretation of Empirical–Statistical Reconstructions	275
8.11	Simulation From Local and Regional to Hemispheric Scale: Projections For the Future	277
8.12	Conclusions and Discussion	278
9	Eco-Physiological Modeling of Tree-Ring Growth	281
9.1	Introduction	281
9.2	Description of the Eco-Physiological Model	284
9.2.1	Microclimatic Data	285
9.2.2	Soil Water Balance	288
9.2.3	Photosynthesis	290
9.2.4	Growth Dynamics	292
9.2.5	The Allocation of Assimilates	294
9.3	Determination of Quantitative Values of Coefficients and Parameters	295
9.4	Examples of Model Applications	296
9.5	Conclusions and Discussion	305
10	Epilogue	307

Growth Dynamics of Conifer Tree Rings
Images of Past and Future Environments
Vaganov, E.A.; Hughes, M.K.; Shashkin, A.V.
2006, XIV, 358 p., Hardcover
ISBN: 978-3-540-26086-8
