

Table of contents

Comparative genomics and gene finding in fungi.....	1
Marina Axelsson-Fisk and Per Sunnerhagen.....	1
Abstract	1
1 Comparative genomics	1
1.1 Comparative genomics of fungi.....	2
1.2 Relationships between sequenced fungal genomes.....	3
1.3 Properties of sequenced fungal genomes	4
1.4 Objectives of comparative genomics using different evolutionary distances.....	7
2 Gene finding in fungal genomes.....	8
2.1 Gene finding in <i>S. cerevisiae</i>	9
2.2 Comparative gene finding in yeast.....	13
3 Extending the applications of fungal comparative genomics	17
3.1 Conservation of pathways.....	17
3.2 Fungal genomes as models for other genomes	19
Acknowledgements	20
References	21
 Taxonomy and phylogenetic diversity among the yeasts	 29
Cletus P. Kurtzman and Jure Piškur	29
Abstract	29
1 Introduction	29
2 Whole genome comparisons from measurements of DNA reassociation	30
3 Identification of species from analysis of gene sequence divergence	33
4 Relationships of fungi from phylogenetic analysis of gene sequence divergence	36
5 Evolution and timing of modern yeast traits	39
6 Future prospects	41
References	41
 Structural features of fungal genomes.....	 47
Phatthanaphong Wanchanthuek, Peter F. Hallin, Rodrigo Gouveia- Oliveira, and David Ussery.....	47
Abstract	47
1 Introduction	47
2 Overview of the fungal genomes.....	49
2.1 Ascomycota	50
2.2 Basidiomycota	54
2.3 Microsporidia.....	54
3 A global view of fungal genomes.....	55

4 Genome Atlases for visualization of DNA structural properties in chromosomes	57
4.1 The <i>S. cerevisiae</i> chromosome XII Genome Atlas	59
5 Comparison of significance of DNA structure in fungal genomes.....	60
5.1 DNA Repeats.....	60
5.2 Bias in purine stretches	64
6 Analyses of promoter area and coding regions	64
6.1 Identifying putative promoter areas	64
6.2 Codon usage comparisons	66
7 Proteome comparisons	68
8 Conclusions.....	69
Acknowledgements	70
References.....	70
Duplication of genes and genomes in yeasts.....	79
Simon Wong and Kenneth H. Wolfe	79
Abstract.....	79
1 The 'true' yeasts	79
2 Taxonomy and phylogeny.....	81
3 Yeast genome sequencing projects.....	83
4 The origin of new genes	84
5 Whole genome duplication.....	86
6 Intraspecific detection of genome duplication	88
7 Interspecific detection of genome duplication	90
8 Genes lost, genes kept	92
References	94
Telomeres in fungi.....	101
Marita Cohn, Gianni Liti, David BH Barton	101
Abstract.....	101
1 Introduction	101
2 Telomeres in sequencing projects	103
3 The structure and maintenance of telomeric repeats	104
4 Telomerase structure	105
5 Other telosome proteins	108
6 Telomere length	111
7 Strand bias and telomeric DNA conformation	111
8 Telomere-associated elements.....	112
9 Subtelomeric homology regions, multiple gene families, and adaptation	116
10 Nuclear architecture: influence of spatial positioning on genomic dynamics	119
11 The future revealed by comparative genomics of telomeres	120
Acknowledgements	122
References	122

Employing protein size in the functional analysis of orthologous proteins, as illustrated with the yeast HOG pathway	131
Marcus Krantz and Stefan Hohmann	131
Abstract	131
1 Introduction	131
2 Orthologue identification	132
2.1 The yeast HOG pathway as an example	132
3 Functional analysis	134
4 Protein size	136
4.1 Protein size as an analytical tool	138
5 Conclusions	141
Acknowledgements	142
References	142
Lager brewing yeast	145
Yukiko Kodama, Morten C. Kielland-Brandt, Jørgen Hansen	145
Abstract	145
1 Introduction	145
1.1 Brewing yeast - history and biotechnology	145
1.2 Genetic structure of lager brewing yeast	146
2 The whole genome sequence of lager brewing yeast	151
3 Chromosomal structure	155
4 Diversity of chromosome structure of lager brewing yeasts and their relatives	158
5 Concluding remarks	158
Acknowledgements	160
References	160
Genome evolution: Lessons from Genolevures	165
Monique Bolotin-Fukuhara, Serge Casaregola, and Michel Aigle	165
Abstract	165
1 Introduction	165
1.1 Genolevures projects	167
1.2 Life styles	168
2 Structural aspects	168
2.1 Sizes	168
2.2 Gene duplication	172
3 Functional aspects	176
3.1 Genolevures I revealed that functional classes may be differently represented among species	177
3.2 The evolution of specific pathways as revealed by Genolevures II	180
4 Conclusions	191
Acknowledgements	192
References	192

The genome of the filamentous fungus <i>Ashbya gossypii</i>: annotation and evolutionary implications.....	197
Sophie Brachat, Fred Dietrich, Sylvia Voegeli, Tom Gaffney, and Peter Philippsen	197
Abstract	197
1 Introduction	198
2 Sequence analysis and annotation of the <i>A. gossypii</i> genome	199
2.1 General features of the genome sequence	199
2.2 Annotation of the assembled DNA sequences	200
2.3 Protein coding genes	201
2.4 Sequence conservation of proteins	203
2.5 Species-specific proteins	205
2.6 RNA-encoding genes	206
2.7 Transposable elements	206
2.8 Centromeres and telomeres	207
3 Evolutionary implications of the <i>A. gossypii</i> genome sequences	207
3.1 Possible origins of duplicated gene segments in <i>S. cerevisiae</i>	207
3.2 Proof for an ancient whole-genome duplication in <i>S. cerevisiae</i>	209
3.3 NOHBY's and non-syntenic homologues in clusters of ancient synteny	212
3.4 Update of duplicate gene blocks in <i>S. cerevisiae</i>	212
3.5 Loss of <i>S. cerevisiae</i> genes after the genome duplication	213
3.6 Synteny breaks as marker of genome rearrangements	213
4 Gene pairs (twins) originating from the genome duplication	215
4.1 Identification of twin ORFs	215
4.2 Genetic complexity caused by twin genes	216
4.3 Sequence divergence of twin genes	218
5 Evolution of chromosome number in <i>A. gossypii</i>	220
6 Material and methods	223
6.1 Sequence and assembly quality	223
6.2 Annotation	224
6.3 Data analysis	225
6.4 Creation of the map of Duplicate Blocks	225
Acknowledgments	225
References	226
 <i>Schizosaccharomyces pombe</i> comparative genomics; from sequence to systems	233
Valerie Wood	233
Abstract	233
1 Introduction	233
2 Genome features	235
2.1 Genome size and sequencing status	235
2.2 Centromeres	236
2.3 Subtelomeric regions	237
2.4 Gene density, GC composition and gene structure	239

2.5 Proteome complement	240
2.6 Non coding RNA complement.....	242
2.7 Intergenic regions	243
2.8 Replication origins.....	244
2.9 Mitochondrial genome	245
2.10 Pseudogenes.....	246
2.11 Transposable elements	246
2.12 Genome features summary	248
3 Genome and proteome sequence comparisons.....	248
3.1 Introduction.....	248
3.2 Genome sequence comparisons	250
3.3 Proteome sequence comparisons	250
3.4 Orthologous groups.....	251
3.5 Lineage Specific Gene Loss.....	256
3.6 Orphan and species-specific sequences	257
4 Comparative and functional genomics	258
4.1 Gene expression studies.....	258
4.2 Regulatory sequences	260
4.3 Integrative comparative studies	262
4.4 Section summary.....	265
5 Curation.....	265
5.1 Gene Ontology structure.....	266
5.2 Gene Ontology implementation	267
5.3 Dynamic aspects of the Gene Ontology and the associated annotations	269
5.4 <i>S. pombe</i> gene associations, coverage and comparison with <i>S.</i> <i>cerevisiae</i>	270
5.5 Searching and accessing GO.....	272
5.6 Curation summary.....	272
6 Future prospects	273
Acknowledgements	274
References	274
