### Part I Macromolecular Models: From Theories to Effective Algorithms

---

#### Membrane Protein Simulations: Modelling a Complex Environment

<i>P.J. Bond, J. Cuthbertson, S.S. Deol, L.R. Forrest, J. Johnston, G. Patargias, M.S.P. Sansom</i> . . . . .	3
1 Introduction – Membrane Proteins and Their Importance . . . . .	3
2 Membrane Protein Environments <i>in Vivo</i> and <i>in Vitro</i> . . . . .	5
3 Simulation Methods for Membranes . . . . .	6
4 Using Simulations to Explore Membrane Protein Systems . . . . .	6
5 Complex Solvents . . . . .	7
6 Detergent Micelles . . . . .	10
7 Lipid Bilayers . . . . .	12
8 Self-Assembly and Complex Systems . . . . .	14
References . . . . .	16

#### Modeling and Simulation Based Approaches for Investigating Allosteric Regulation in Enzymes

<i>M.Q. Ma, K. Sugino, Y. Wang, N. Gehani, A.V. Beuve</i> . . . . .	21
1 Introduction . . . . .	21
2 Modeling and Simulation of sGC . . . . .	25
3 Future Work . . . . .	29
References . . . . .	31

#### Exploring the Connection Between Synthetic and Natural RNAs in Genomes via a Novel Computational Approach

<i>U. Laserson, H.H. Gan, T. Schlick</i> . . . . .	35
1 Introduction: Importance of RNA Structure and Function . . . . .	35
2 Exploring the Connection between Synthetic and Natural RNAs . . . . .	36
3 Methods . . . . .	37

4	Results .....	41
5	Conclusions and Future Directions .....	48
	References .....	53

### Learning to Align Sequences:

#### A Maximum-Margin Approach

<i>T. Joachims, T. Galor, R. Elber</i> .....	57
1 Introduction .....	57
2 Sequence Alignment .....	58
3 Inverse Sequence Alignment .....	59
4 A Maximum-Margin Approach to Learning the Cost Parameters .....	60
5 Training Algorithm .....	63
6 Experiments .....	66
7 Conclusions .....	68
References .....	68

---

## Part II Minimization of Complex Molecular Landscapes

---

### Overcoming Energetic and Time Scale Barriers Using the Potential Energy Surface

<i>D.J. Wales, J.M. Carr, T. James</i> .....	73
1 Introduction .....	73
2 Discrete Path Sampling .....	74
3 Basin-Hopping Global Optimisation .....	79
References .....	83

### The Protein Folding Problem

<i>H.A. Scheraga, A. Liwo, S. Oldziej, C. Czaplewski, J. Pillardy, J. Lee, D.R. Ripoll, J.A. Vila, R. Kazmierkiewicz, J.A. Saunders, Y.A. Arnautova, K.D. Gibson, A. Jagielska, M. Khalili, M. Chinchio, M. Nancias, Y.K. Kang, H. Schafroth, A. Ghosh, R. Elber, M. Makowski</i> .....	89
1 Introduction .....	89
2 Early Approaches to Structure Prediction .....	89
3 Global Optimization of Crystal Structures .....	90
4 All-atom Treatment of Protein A and the Villin Headpiece .....	91
5 Hierarchical Approach to Predict Structures of Large Protein Molecules .....	91
6 Performance in CASP Tests .....	92
7 Computation of Folding Pathways .....	93
8 Molecular Dynamics with the UNRES Model .....	95
9 Conclusions .....	96
References .....	97

---

**Part III Dynamical and Stochastic-Dynamical Foundations  
for Macromolecular Modelling**

---

**Biomolecular Sampling: Algorithms,  
Test Molecules, and Metrics**

<i>S.S. Hampton, P. Brenner, A. Wenger, S. Chatterjee, J.A. Izaguirre</i> . . . . .	103
1 Introduction . . . . .	103
2 Sampling Algorithms . . . . .	105
3 Test Systems, Methods, and Metrics . . . . .	111
4 Simulation Results . . . . .	114
5 Discussion . . . . .	119
References . . . . .	121

**Approach to Thermal Equilibrium  
in Biomolecular Simulation**

<i>E. Barth, B. Leimkuhler, C. Sweet</i> . . . . .	125
1 Introduction . . . . .	125
2 Molecular Dynamics Formulation . . . . .	128
3 Thermostatting using Nosé-Hoover Chains, Nosé-Poincaré and RMT Methods . . . . .	130
4 Conclusions . . . . .	137
References . . . . .	139

**The Targeted Shadowing Hybrid Monte Carlo (TSHMC) Method**

<i>E. Akhmatskaya, S. Reich</i> . . . . .	141
1 Introduction . . . . .	141
2 Description of the Basic HMC Method . . . . .	142
3 Störmer-Verlet Time-Stepping Method and Modified Hamiltonian . . . . .	143
4 Targeted Shadowing HMC . . . . .	144
5 Computer Experiment . . . . .	148
6 Conclusion . . . . .	151
References . . . . .	151

**The Langevin Equation for Generalized Coordinates**

<i>R.L.C. Akkermans</i> . . . . .	155
1 Introduction . . . . .	155
2 Generalized Coordinates . . . . .	157
3 Generalized Langevin Equation . . . . .	158
4 Point Transformations . . . . .	160
5 Conclusions . . . . .	163
References . . . . .	164

**Metastability and Dominant Eigenvalues of Transfer Operators**

<i>W. Huisinga, B. Schmidt</i> .....	167
1 Introduction .....	167
2 Markovian Molecular Dynamics .....	169
3 Markov Chains, Transfer Operators, and Metastability .....	170
4 Upper and Lower Bounds .....	172
5 Illustrative Examples .....	176
6 Outlook .....	180
References .....	180

---

**Part IV Computation of the Free Energy**

---

**Free Energy Calculations in Biological Systems. How Useful Are They in Practice?**

<i>C. Chipot</i> .....	185
1 Introduction .....	185
2 Methodological Background .....	186
3 Free Energy Calculations and Drug Design .....	194
4 Free Energy Calculations and Signal Transduction .....	199
5 Free Energy Calculations and Peptide Folding .....	201
6 Free Energy Calculations and Membrane Protein Association .....	204
7 Conclusion .....	206
References .....	207

**Numerical Methods for Calculating the Potential of Mean Force**

<i>E. Darve</i> .....	213
1 Introduction .....	213
2 Generalized Coordinates and Lagrangian Formulation .....	218
3 Derivative of the Free Energy .....	223
4 Potential of Mean Constraint Force .....	226
5 Adaptive Biasing Force .....	233
6 Numerical Results .....	238
7 Conclusion .....	244
References .....	246

**Replica-Exchange-Based Free-Energy Methods**

<i>C.J. Woods, M.A. King, J.W. Essex</i> .....	251
1 Introduction .....	251
2 Free Energy Calculations .....	251
3 Hydration of Water and Methane .....	253
4 Halide Binding to a Calix[4]Pyrrole Derivative .....	255
5 Conclusion .....	257
References .....	257

---

**Part V Fast Electrostatics and Enhanced Solvation Models**

---

**Implicit Solvent Electrostatics in Biomolecular Simulation**

<i>N.A. Baker, D. Bashford, D.A. Case</i> .....	263
1 Introduction .....	263
2 Poisson-Boltzmann Methods .....	266
3 Generalized Born and Related Approximations .....	273
4 Applications .....	278
5 Conclusions .....	285
References .....	286

**New Distributed Multipole Methods for Accurate Electrostatics in Large-Scale Biomolecular Simulations**

<i>C. Sagui, C. Roland, L.G. Pedersen, T.A. Darden</i> .....	297
1 Introduction .....	297
2 Calculations .....	300
3 Results and Discussion .....	302
4 Conclusion .....	309
References .....	310

---

**Part VI Quantum-Chemical Models for Macromolecular Simulation**

---

**Towards Fast and Reliable Quantum Chemical Modelling of Macromolecules**

<i>Y. Tu, A. Laaksonen</i> .....	315
1 Introduction .....	315
2 Extended NDDO Approximation (PART I) .....	317
3 An Efficient <i>ab initio</i> Tight-Binding Method (PART II) .....	325
4 Conclusion .....	338
References .....	338

**Quantum Chemistry Simulations of Glycopeptide Antibiotics**

<i>J.-G. Lee, C. Sagui, C. Roland</i> .....	343
1 Introduction .....	343
2 Calculations .....	344
3 Results and Discussion .....	345
4 Conclusion .....	350
References .....	350

<b>Panel Discussion</b> .....	353
-------------------------------	-----

**New Algorithms for Macromolecular Simulation**

Leimkuhler, B.; Chipot, C.; Elber, R.; Laaksonen, A.;

Mark, A.; Schlick, T.; Schütte, C.; Skeel, R. (Eds.)

2006, XVI, 367 p. 85 illus., 8 illus. in color., Softcover

ISBN: 978-3-540-25542-0
