Part A Transgenic Trees in the World

1 Field Trials with Transgenic Trees – State of the Art and Developments

MARCEL ROBISCHON	3
1.1 Introduction	3
1.2 Transgenic Trees in Test Tube and Field Trials	3
1.3 Transgenic Trees for Improvement of Forestry	6
1.3.1 Northern America	6
1.3.2 Europe	10
1.3.3 Latin America	13
1.3.4 South Africa	14
1.3.5 Australasia	15
1.3.5.1 New Zealand	15
1.3.5.2 Japan	16
1.3.5.3 Vietnam	16
1.3.5.4 China	17
1.4 Fruit Trees	18
1.4.1 North America	18
1.4.2 Europe	18
1.4.3 The Papaya Story	20
1.4.4 New Applications of Transgenic Trees	20
1.5 Conclusions	21
References	22

2 Transgenic Forest Trees in China

DIETRICH EWALD, JIANJUN HU, AND MINSHENG YANG	25
2.1 Introduction	25
2.2 Production of Insect Resistant Transgenic Forest Trees in China	26
2.3 Transgenic Trees Tolerant to Environmental Stresses	30
2.4 Sterile Transgenic Forest Trees	31
2.5 Further Transformation Work on Forest Trees	32
2.6 Field Tests of Transgenic Trees	33
2.7 Commercial Use of Transgenic Forest Trees	38
2.8 Rules and Regulations	41
2.9 Conclusions	41
References	42

3 Modification of Perennial Fruit Trees

XIUXIN DENG AND YANXIN DUAN	47
3.1 Introduction	47
3.2 General Overview of Transformed Fruit Trees	48
3.3 Target Genes Introduced into Fruit Trees	53
3.3.1 Abiotic-stress Tolerance	54
3.3.2 Shortening of the Juvenile Phase	54
3.3.3 Disease Resistance	54
3.3.4 Insect Resistance	54
3.3.5 Rootstock Improvement	55
3.3.6 Fruit Improvement	55
3.4 Progress in Genetic Transformation of Fruit Trees	55
3.4.1 Apple	55
3.4.2 Apricot	56
3.4.3 Cherry	56
3.4.4 Chestnut	57
3.4.5 Citrus	57
3.4.6 Grapevine	58
3.4.7 Kiwifruit	58
3.4.8 Papaya	58
3.4.9 Peach	59
3.4.10 Pear	59
3.4.11 Persimmon	60
3.4.12 Plum	60
3.4.13 Walnut	60
3.4.14 Others	60
3.5 Conclusions	61
References	62

4 Genetic Transformation of Some Tropical Trees, Shrubs, and Tree-like Plants

SHUCHISHWETA V. KENDURKAR, VAISHALI B. NAIK, AND RAJANI S. NADGAUDA	67
4.1 Introduction	67
4.2 Genetic Transformation Studies	68
4.2.1 Banana, <i>Musa</i> sp.	68
4.2.2 Cocoa, <i>Theobroma cacao</i> L.	76
4.2.3 Coffee, <i>Coffea</i> sp.	78
4.2.4 Eucalyptus, <i>Eucalyptus</i> sp.	81
4.2.5 Oil Palm, <i>Elaeis guineensis</i> Jacq.	84
4.2.6 Rubber Tree, <i>Hevea brasiliensis</i> Muell. Arg.	87
4.3 Conclusions	90
References	92

Part B Wood and other Traits

5 Environmental Aspects of Lignin Modified Trees

HELY HÄGGMAN, KAROLIINA NIEMI, HEIDI TIIMONEN, TIINA YLIOJA, AND VINCENT CHIANG	105
5.1 Introduction	105

5.2	Lignin and Current Knowledge of Lignin Biosynthesis	106
5.3	Lignin Modification in Genetically Engineered Trees	108
5.4	Environmental Aspects of Processing Lignin Modified Trees in the Pulp and Paper Industry	109
5.5	Ecological Interactions of Lignin Modified Trees	111
5.5.1	Insect Herbivores	111
5.5.2	Mycorrhizas	114
5.6	Conclusions	115
	References	117
6	Modification of Cellulose in Wood	
	MATTHIAS FLADUNG	123
6.1	Introduction	123
6.2	Modification of Lignin (and Cellulose) Content via “Lignin-enzymes”	124
6.3	Modification of Cellulose Content via “Cellulose Genes”	126
6.3.1	Cell Wall Formation and Cellulose Synthesis	126
6.3.2	Cellulose Degradation	128
6.4	Modification of Cellulose Fibre via “Hormone Genes”	128
6.5	Conclusions	132
	References	133
7	Heavy Metal Resistance and Phytoremediation with Transgenic Trees	
	ANDREAS D PEUKE AND HEINZ RENNENBERG	137
7.1	Introduction	137
7.2	The Problem: Soil Contamination	140
7.3	Some Specialists Can Deal with High Levels of Heavy Metals: Hyperaccumulators	141
7.4	Dealing with High Concentration of Heavy Metals – Homeostasis, Tolerance, Detoxification	142
7.5	The Impact of Glutathione in Stress Resistance	143
7.6	Molecular Engineering to Improve the Performance of Plants in Phytoremediation	147
7.7	The Use of Trees for Phytoremediation	149
7.8	Conclusions	151
	References	152
8	Transgenic Approaches to Engineer Nitrogen Metabolism	
	FRANCISCO M CÁNOVAS, FERNANDO GALLARDO, ZHONG PING JING, AND MARÍA BELÉN PASCUAL	157
8.1	Introduction	157
8.2	Nitrogen Uptake, Assimilation and Related Pathways	157
8.2.1	Nitrogen Uptake	157
8.2.2	Nitrogen Assimilation	159
8.2.3	Carbon Flux for Amino Acid Biosynthesis	161
8.3	Relevance of N Metabolism in Trees	162

8.4	Genetic Manipulation of Nitrogen Metabolism	163
8.4.1	Studies in Model and Crop Plants	163
8.4.2	Production of Transgenic Trees and Consequences of Gene Manipulation	165
8.4.2.1	Enhanced Photosynthetic Metabolism and Vegetative Growth	165
8.4.2.2	Increased N Use Efficiency	168
8.4.2.3	Increased Resistance to Stress	169
8.4.2.4	Increased Nitrogen Reserves	169
8.4.2.5	The Importance of C/N Balance	170
8.5	Conclusions	172
	References	174

Part C Biotic and Abiotic Resistances

9 Virus Resistance Breeding in Fruit Trees

MARGIT LAIMER	181
9.1 Introduction	181
9.2 Importance of Viral Diseases	181
9.2.1 Citrus Tristeza Virus (CTV) (<i>Closteroviridae</i>)	182
9.2.2 Grapevine Viruses	183
9.2.3 Prunus Viruses	183
9.2.4 Papaya Ringspot Virus (PRSV) (<i>Potyviridae</i>)	183
9.2.5 Cacao Swollen Shoot Virus (CSSV) (<i>Caulimoviridae</i> , genus <i>Badnavirus</i>)	184
9.3 Conventional Breeding Efforts for Virus Resistance in Trees	184
9.4 Classical Cross Protection	186
9.5 Pathogen Derived Resistance (PDR)	187
9.5.1 Transformation, Selection and Regeneration Approaches	188
9.5.2 Description of Construct Design	189
9.5.3 Survey of Virus Resistance in Transgenic Fruit Trees	191
9.6 Conclusions	193
References	193

10 The Use of Genetic Transformation Procedures to Study the Defence and Disease Resistance Traits of Trees

TREVOR M FENNING	201
10.1 Introduction	201
10.2 Ecological Background	201
10.3 The Constitutive and Induced Defenses of Plants	203
10.3.1 Constitutive Defenses	203
10.3.2 Induced Direct Defenses	205
10.3.3 Induced Indirect Defenses	206
10.4 Wound Perception and Signaling	208
10.5 The Elm Leaf Beetle System	212
10.6 Bark Beetles and the Resin Defenses of Conifers	213
10.7 Other Pest Syndromes of Conifers	215

10.8	Genes and Pathways of Interest	217
10.8.1	The Biochemistry and Genetics of Plant Volatile Emission	217
10.8.2	The Biosynthesis of Terpenoids in Plants	218
10.8.3	Further Approaches for Identifying Other Genes of Interest	221
10.9	Advances in Understanding Tree Diseases from Introduced Novel Defensive Traits	223
10.10	Studies with Exotic Diseases	224
10.11	Conclusions	225
	References	227
11	Fungal and Bacterial Resistance in Transgenic Trees	
	WILLIAM A POWELL, CHARLES A MAYNARD, BRIAN BOYLE, AND ARMAND SÉGUIN	235
11.1	Introduction	235
11.2	Review of Current Approaches	236
11.2.1	Chitinases	236
11.2.2	Antimicrobial Peptides	237
11.2.2.1	Short Amphipathic Cationic Peptides	237
11.2.2.2	Cystein-rich Peptides	239
11.2.2.3	Attacins	240
11.2.3	Oxalate Oxidase	240
11.2.4	RNA Interference (RNAi or Post-transcriptional Gene Silencing [PTGS])	241
11.2.5	Plantibodies	242
11.2.6	Other Resistance-enhancing Transgenes	243
11.3	Next Steps	244
11.4	Conclusions	247
	References	247
12	Genetically Modified Trees Expressing Genes for Insect Pest Resistance	
	ALMA BALESTRAZZI, GIANNI ALLEGRO, AND MASSIMO CONFALONIERI	253
12.1	Introduction	253
12.2	The Insecticidal δ -Endotoxins from <i>Bacillus thuringiensis</i> and their Role in the Control of Insect Pests	256
12.2.1	Transfer of <i>Bt</i> Genes into Forest Tree Species	257
12.2.2	Transgenic Fruit Trees Expressing <i>Bt</i> Genes	259
12.3	Plant Proteinase Inhibitors: A Useful Tool for Plant Defence Against Insect Predation	259
12.3.1	Transfer of <i>PI</i> Genes into Forest and Fruit Trees	260
12.4	Other Strategies to Obtain Insect Resistance in Forest and Fruit Trees	262
12.5	Environmental Risk and Deployment Strategies for Genetically Engineered Insect-resistant Trees	263
12.5.1	Field Trials with Insect-resistant GM Trees	263
12.5.2	Toxicity and Allergenicity of Proteins Encoded by Genes for Insect Pest Resistance	264
12.5.3	Development of Target Pests Resistant to GM Trees	265
12.5.4	Emergence of New Pests Following GM Trees Deployment	266

12.6	Deleterious Effects on the Ecosystems	266
12.7	Horizontal Transfer of the Transgenes to Other Organisms	267
12.8	Conclusions	268
	References	268

Part D	Biosafety Issues	
14	Genome Instability in Woody Plants Derived from Genetic Engineering	
	HANS HOENICKA AND MATTHIAS FLADUNG	301
14.1	Introduction	301
14.2	Genetic Engineering of Woody Plants	301
14.3	Genome Instability in Plants	302
14.3.1	Genome Instability Caused by Viruses and Repetitive Elements in Plants	302
14.3.2	Polyploidy	304
14.4	Genome Instability in Transgenic Plants	305
14.4.1	Somaclonal Variation	305
14.4.2	Molecular Marker Analysis of Genome Instability in Transgenic Plants	306
14.4.3	Transgene Silencing	306
14.4.4	Structure of T-DNA Insertion Locus	307
14.4.5	Recombination Between Transgenic Sequences, Viruses and Repetitive Elements	308
14.5	Transgene Stability in Woody Plants	309
14.5.1	Instability of Transgene Expression	310
14.5.1.1	<i>Populus</i> spp.	310
14.5.1.2	Citrange (<i>Citrus sinensis</i> L. Osbeck × <i>Poncirus trifoliata</i> L. Raf.)	311
14.5.1.3	Spruce (<i>Picea mariana</i> , <i>P. glauca</i> , <i>P. abies</i>)	311
14.5.1.4	<i>Pinus radiata</i>	312
14.5.1.5	Apple (<i>Malus</i> spp.)	312

14.5.2	Recombination Between Transgenic and Virus DNA/RNA	312
14.5.2.1	Grapevine (<i>Vitis</i> spp. L)	312
14.5.2.2	<i>Prunus</i> spp.	313
14.6	Conclusions	314
