

Table of Contents

1. Optimal Growth Without Discounting	
<i>Rose-Anne Dana and Cuong Le Van</i>	1
1.1 Introduction	1
1.2 The Model	2
1.3 Good Programmes	3
1.3.1 Good Programmes	3
1.3.2 Convergence Properties of Good Programmes	5
1.3.3 Existence of Good Programmes from x_0	7
1.4 Optimal and Weakly Optimal Programmes	8
1.4.1 Definition and First Properties	8
1.4.2 Definition and Characterisation	8
1.4.3 Existence of Optimal Programmes	9
1.4.4 Euler Equation	11
1.5 Bellman's Equation, Optimal Policy	12
1.5.1 Bellman's Equation	12
1.5.2 Optimal Policy	14
1.5.3 Examples	15
2. Optimal Growth Models with Discounted Return	
<i>Cuong Le Van</i>	19
2.1 Bounded from Below Utility	21
2.1.1 The General Case	21
2.1.2 The Case of a Concave Return Function and a Convex Technology	32
2.1.3 Examples	37
2.2 Unbounded from Below Utility	45
3. Duality Theory in Infinite Horizon Optimization Models	
<i>Tapan Mitra</i>	55
3.1 Introduction	55
3.2 A General Intertemporal Allocation Model	57
3.3 Characterization of Optimal Programs in Terms of Dual Variables	58
3.3.1 When Are Competitive Programs Optimal?	59
3.3.2 When Are Optimal Programs Competitive?	60

3.3.3	An Example.....	63
3.4	Duality Theory for Stationary Optimal Programs.....	65
3.4.1	Existence of a Stationary Optimal Stock via Duality Theory	65
3.4.2	Quasi-Stationary Price Support for Stationary Optimal Programs	67
3.5	Replacing the Transversality Condition by a Period-by-Period Condition	68
3.6	Are Competitive Programs Optimal?	71
3.7	Duality Theory in the Consumption Model	74
3.7.1	The Model	74
3.7.2	Conversion to the Format of the General Model.....	76
3.7.3	Characterization of Optimal Plans in Terms of Dual Variables	76
3.7.4	Existence of a Stationary Optimal Output	78
3.8	Weitzman's Theorem on the NNP	79
3.9	Bibliographic Notes.....	81
4.	Rationalizability in Optimal Growth Theory	
	<i>Gerhard Sorger</i>	85
4.1	Introduction	85
4.2	Problem Formulation	87
4.3	Optimal Policy Functions	90
4.4	Discount Factor Restrictions	99
4.5	Extensions	106
5.	On Stationary Optimal Stocks in Optimal Growth Theory: Existence and Uniqueness Results	
	<i>Tapan Mitra and Kazuo Nishimura</i>	115
5.1	Introduction	115
5.2	Preliminaries	117
5.2.1	Notation	117
5.2.2	The Model	118
5.2.3	Existence of Optimal Programs and the Principle of Optimality	118
5.3	Equivalence of Discounted Golden-Rule and Stationary Optimal Stocks	119
5.4	Existence of Discounted Golden-Rule and Stationary Optimal Stocks	121
5.5	Uniqueness of Non-trivial SOS	124
5.5.1	Description of the Framework	125
5.5.2	A Uniqueness Result Under Normality.....	126
5.5.3	An Example of Non-uniqueness of SOS	129
5.6	Uniqueness of Interior SOS for Smooth Economies	132
5.7	Bibliographic Remarks	137

6. Optimal Cycles and Chaos

<i>Tapan Mitra, Kazuo Nishimura, and Gerhard Sorger</i>	141
6.1 Introduction	141
6.2 Basic Definitions and Results	142
6.2.1 Dynamical Systems	143
6.2.2 Optimal Growth Models	145
6.3 Optimal Cycles	147
6.3.1 Monotonic Policy Functions	148
6.3.2 The Role of Discounting	150
6.3.3 Variations on Weitzman's Example	153
6.3.4 Variations on Sutherland's Example	156
6.4 Optimal Chaos	156
6.4.1 Sources of Optimal Chaos	158
6.4.2 Optimal Chaos Under Weak Impatience	163

7. Intertemporal Allocation with a Non-convex Technology

<i>Mukul Majumdar</i>	171
7.1 Introduction	171
7.2 Optimal Allocation in a Closed Economy	174
7.2.1 Production	174
7.2.2 Programs	175
7.2.3 Evaluation Criteria	175
7.3 Characterization of Inefficiency	177
7.4 The Ramsey Problem: Undiscounted Utilities	178
7.4.1 Stationary Programs: The Golden Rule Equilibrium ...	179
7.4.2 Non-stationary Programs	181
7.5 Mild Discounting: Comparative Dynamics and Stability	185
7.5.1 The Modified Golden Rule	185
7.5.2 Non-stationary Programs	186
7.6 Discounting: The Linear Utility Function	190
7.6.1 An Alternative Interpretation: A Competitive Fishery .	190
7.6.2 Characterization of Optimal Programs	191
7.7 A Multi-sector Non-convex Economy: The Undiscounted Case	192
7.8 Optimal Allocation in a Small Open Economy	195
7.8.1 A Small Open Economy with Non-convexity	195
7.8.2 Interpretation	196
7.8.3 Escape from the Poverty Trap	197
7.9 Some Concluding Comments	198

8. Isotone Recursive Methods: The Case of Homogeneous Agents

<i>Manjira Datta and Kevin L. Reffett</i>	203
8.1 Introduction	203
8.2 Preliminaries	205
8.2.1 Ordered Spaces	205
8.2.2 Mappings	207

8.3	Fixed Point Theory in Ordered Spaces	208
8.3.1	Existence	208
8.3.2	Computational Fixed Point Theory	212
8.3.3	Monotone Selections and the Equilibrium Correspondence	214
8.4	An Economy with Classical Technology	215
8.4.1	The Existence of MEDPs	218
8.4.2	The Uniqueness of MEDPs	220
8.4.3	Monotone Comparison Theorems Using Euler Equation Methods	222
8.5	An Economy with Nonclassical Technology	223
8.5.1	The Parameter Space and Household Decision Problems	225
8.5.2	The Existence of MEDPs	231
8.5.3	Monotone Comparison Theorems via Lattice Programming Methods	231
8.6	An Economy with Elastic Labor Supply	234
8.6.1	The Household Decision and Equilibrium	235
8.6.2	The Existence of Equilibrium	238
8.6.3	The Uniqueness of Equilibrium	241
8.7	Concluding Remarks	244
9.	Discrete-Time Recursive Utility	
	<i>John H. Boyd III</i>	251
9.1	Why Recursive Utility?	251
9.2	Recursive Utility and Aggregators	252
9.2.1	Construction of Recursive Utility from an Aggregator ..	253
9.3	Existence of Optimal Paths	259
9.4	One-Sector Model with Recursive Utility	260
9.4.1	Dynamic Programming	261
9.5	Optimal Paths in the One-Sector Model	264
9.5.1	The Inada Conditions	265
9.5.2	Monotonicity	266
9.6	Homogeneous Recursive Utility and Sustained Growth	268
10.	Indeterminacy in Discrete-Time Infinite-Horizon Models	
	<i>Kazuo Nishimura and Alain Venditti</i>	273
10.1	Introduction	273
10.2	One-Sector Models	274
10.3	Two-Sector Models with Cobb-Douglas Technologies	277
10.4	Two-Sector Models with CES Technologies	281
10.4.1	Symmetric Elasticities of Substitution	282
10.4.2	Asymmetric Elasticities of Substitution	283
10.5	Extensions with Cobb-Douglas Technologies	286
10.5.1	Partial Depreciation	286
10.5.2	Intersectoral Externalities	289

10.6	Other Formulations	291
10.6.1	Variable Capital Utilization	291
10.6.2	Two-Sector Models with General Technologies	292
11.	Theory of Stochastic Optimal Economic Growth	
	<i>Lars J. Olson and Santanu Roy</i>	297
11.1	Introduction	297
11.2	The Classical Framework	298
11.2.1	The One Sector Classical Model: Basic Properties	298
11.2.2	Stochastic Steady States and Convergence Properties in the One Sector Classical Model	304
11.2.3	Stochastic Steady States and Convergence Properties in the Multisector Classical Model	310
11.3	Extensions of the Classical Framework	312
11.3.1	Sustained (Long Run) Growth	312
11.3.2	Stochastic Growth with Irreversible Investment	313
11.3.3	Stochastic Growth with Experimentation and Learning	314
11.4	Non-classical Models of Optimal Stochastic Growth	316
11.4.1	Stochastic Growth with Non-convex Technology	316
11.4.2	Stochastic Growth with Stock-Dependent Utility	320
11.5	Comparative Dynamics	322
11.6	Solving the Stochastic Growth Model	324
11.7	Conclusion	325
12.	The von Neumann–Gale Growth Model and Its Stochastic Generalization	
	<i>Igor V. Evstigneev and Klaus R. Schenk-Hoppé</i>	337
12.1	Introduction	337
12.2	The Model and the Main Concepts	339
12.2.1	Basic Definitions	339
12.2.2	Nonlinear von Neumann Models	342
12.2.3	Modeling Financial Markets	344
12.2.4	Stationary Models	346
12.3	Assumptions and Results	348
12.3.1	Assumptions	348
12.3.2	Finite Rapid Paths	349
12.3.3	Infinite Rapid Paths: Existence and Quasi-Optimality	351
12.3.4	Turnpike Theorems	352
12.3.5	The Stationary Case: von Neumann Ray and von Neumann Equilibrium	354
12.3.6	Duality and Reachability	356
12.4	Model Description	357
12.4.1	General (Non-stationary) Model	357
12.4.2	Stationary Model	358
12.4.3	Rapid Paths	360

12.5	Key Assumptions and Results in the Non-stationary Case	361
12.5.1	Assumptions	361
12.5.2	Finite Rapid Paths	363
12.5.3	Quasi-Optimality of Infinite Rapid Paths	364
12.5.4	Turnpike Theorems and Infinite Rapid Paths	365
12.6	Stationary Models: von Neumann Equilibrium	366
12.6.1	Von Neumann Equilibrium	366
12.6.2	The Existence Problem for a von Neumann Equilibrium	366
12.6.3	Randomization	367
12.6.4	Von Neumann Path, Log-Optimal Investments and the Numeraire Portfolio	369
12.7	Stochastic Version of the Perron–Frobenius Theorem and Its Applications	370
12.7.1	Stochastic Perron–Frobenius Theorem	370
12.7.2	Von Neumann–Gale Systems Defined by Positive Random Matrices	371
12.7.3	Volatility-Induced Financial Growth	372
12.8	Asset Pricing and Hedging	373
12.8.1	Model Description	373
12.8.2	Hedging Problem and Duality	375
12.8.3	An Example: A Currency Market Without Short Sales .	376
A	The Kuhn–Tucker Theorem	378
B	Cones and Separation Theorems	378
C	Positive Matrices	379
13.	Equilibrium Dynamics with Many Agents	
	<i>Robert A. Becker</i>	385
13.1	Introduction: Ramsey’s Steady State Conjecture	385
13.2	Impatience and the Distribution of Wealth	386
13.2.1	Rae’s and Fisher’s Time Preference Theories	387
13.2.2	The Solow–Stiglitz Convergence Hypothesis	388
13.2.3	General vs. Temporary Equilibrium	390
13.2.4	Mankiw’s Savers–Spenders Model	392
13.3	The Ramsey Equilibrium Model	394
13.3.1	The Basic Model and Blanket Assumptions	394
13.3.2	The Households’ Problems	396
13.3.3	The Production Sector’s Objective	398
13.3.4	The Ramsey Economy	398
13.3.5	The Equilibrium Concept	399
13.4	Stationary Ramsey Equilibrium Models	400
13.4.1	Heterogeneous Households and Differing Rates of Impatience	400
13.4.2	Stationary Strategic Ramsey Equilibria	406

13.4.3	Heterogeneous Households and Identical Rates of Impatience	407
13.4.4	Stationary Ramsey Equilibria with Flexible Time Preference	408
13.4.5	Uncertainty and Stationary Equilibrium	410
13.4.6	Comments on Ramsey's Conjecture	417
13.5	Ramsey Equilibrium Dynamics	418
13.5.1	Existence of Ramsey Equilibrium and Sufficient Conditions for a Ramsey Equilibrium Path	420
13.5.2	The Recurrence and Turnpike Properties	424
13.5.3	Equilibrium Dynamics with Capital Income Monotonicity	431
13.5.4	Special Ramsey Equilibria	433
13.6	Conclusion	436
14.	Dynamic Games in Economics	
	<i>Rabah Amir</i>	443
14.1	Introduction	443
14.1.1	Purpose and Scope of the Survey	444
14.1.2	Special Features of Economic Applications of Dynamic Games	444
14.1.3	Organization of the Survey	445
14.2	Open-Loop vs Markovian Equilibrium	446
14.2.1	Open-Loop Strategies in Deterministic Dynamic Games	446
14.2.2	Open-Loop Equilibrium in Economic Models	447
14.2.3	Markovian Equilibrium	448
14.2.4	On Open-Loop Versus Markovian Equilibria	449
14.3	Special Classes of Dynamic Games	450
14.3.1	Linear-Quadratic Dynamic Games	450
14.3.2	Dynamic Games with Myopic Equilibrium	452
14.4	Common-Property Productive Assets	453
14.4.1	The Beginnings of this Literature	454
14.4.2	General Functional Forms	455
14.5	General Existence Results	456
14.5.1	Existence of Mixed-Strategy Markov Equilibrium	457
14.5.2	Existence of Pure-Strategy Markov Equilibrium	457
14.6	Dynamic Games in Industrial Organization	461
14.6.1	Dynamic Competition with a Fixed Number of Firms	462
14.6.2	Dynamic Competition with Entry and Exit	462
14.6.3	Empirical and Computational Work on Industry Dynamics	463
14.7	Dynamic Games of Perfect Information	464
14.7.1	Games of Strategic Bequests	464
14.7.2	A Class of Games with Alternating Moves	465
14.7.3	General Existence Results	466

XVIII Table of Contents

14.8	Dynamic Games with a Continuum of Players.....	466
14.9	Computational Methods.....	467
14.10	Experimental Research on Dynamic Games	468
14.11	Appendix	469

Handbook on Optimal Growth 1

Discrete Time

Dana, R.-A.; Van, C.; Mitra, T.; Nishimura, K. (Eds.)

2006, XIX, 477 p., Hardcover

ISBN: 978-3-540-32308-2
