
Contents

-1	Notation and Convention	1
0	Preliminaries	3
0.1	Doob's Maximal Identity	3
0.2	Balayage Formula	4
0.3	Predictable Compensators	6
0.4	σ -fields Associated with a Random Time Λ	6
0.5	Integration by Parts Formulae	7
0.6	H^1 and BMO Spaces	7
0.7	Exercises	8
1	Enlargements of Filtrations	11
1.1	Some General Problems of Enlargements	11
1.2	Progressive Enlargement	12
1.2.1	Decomposition Formula	13
1.2.2	Pitman's Theorem on $2S-B$ and Some Generalizations via Some Progressive Enlargement of Filtration	17
1.3	Initial Enlargement	18
1.4	Further References.....	22
1.5	Exercises	22
A	Appendix: Some Enlargements Formulae	31
	Tables 1α and 1β : Progressive Enlargements.....	32
	Tables 2α and 2β : Initial Enlargements	34
	Comments on the Tables.....	36
2	Stopping and Non-stopping Times	41
2.1	Stopping Times and Doob's Optional Theorem	41
2.1.1	The Knight-Maisonneuve Characterization of Stopping Times	41
2.1.2	D. Williams' Example of a Pseudo-stopping Time	42

2.1.3	A Characterization of Pseudo-stopping Times	43
2.2	How Badly are the BDG Inequalities Affected by a General Random Time?	44
2.2.1	A Global Approach (Common to all Λ 's)	45
2.2.2	An "Individual" Approach (Depending on Λ)	46
2.3	Local Time Estimates	47
2.4	Further References	49
2.5	Exercises	49
3	On the Martingales which Vanish on the Set of Brownian Zeroes	53
3.1	Some Quantities Associated with γ	53
3.1.1	Azéma Supermartingale and the Predictable Compensator Associated with γ	54
3.1.2	Path Decomposition Relative to γ	55
3.1.3	Brownian Meander	55
3.2	Some Examples of Martingales which Vanish on $\mathcal{Z} = \{t; B_t = 0\}$	57
3.3	Some Brownian Martingales with a Given Local Time, or Supremum Process	59
3.4	A Remarkable Coincidence between $\mathbb{E}[X \mathcal{F}_\gamma]$ and X_γ	60
3.5	Resolution of Some Conditional Equations	62
3.6	Understanding how $\mathbb{E}[X \mathcal{F}_\gamma]$ and X_γ Differ	64
3.7	Exercises	66
4	PRP and CRP for Some Remarkable Martingales	71
4.1	Definition and First Example	71
4.2	PRP and Extremal Martingale Distributions	74
4.3	CRP: An Attempt Towards a General Discussion	75
4.3.1	An Attempt to Understand the CRP in Terms of a Generalized Moments Problem	76
4.3.2	Some Sufficient Conditions for the CRP	77
4.3.3	The Case of the Azéma Martingale	79
4.4	Exercises	83
5	Unveiling the Brownian Path (or history) as the Level Rises	87
5.1	Above and Under a Given Level	88
5.1.1	First Computations in Williams' Framework	88
5.1.2	First Computations in Azéma-Hu's Framework	90
5.2	Rogers-Walsh Theorem about Williams' Filtration	93
5.2.1	Some Space Martingales which are Constant up to a Fixed Level	93
5.2.2	A Dense Family of Continuous Martingales	94
5.3	A Discussion Relative to $(\mathcal{E}_A^a, a \in \mathbb{R})$	95
5.3.1	Hu's Result about $(\mathcal{E}_A^a, a \in \mathbb{R})$ -Martingales	95

5.3.2	Some Markov Processes with Respect to $(\mathcal{E}_{\mathbb{A}}^a, a \in \mathbb{R}) \dots$	97
5.4	Some Subfiltrations of the Brownian Filtration	99
5.5	Exercises	101
6	Weak and Strong Brownian Filtrations	103
6.1	Definitions	104
6.2	Examples of Weak Brownian Filtrations	105
6.2.1	Change of Probability	106
6.2.2	Change of Time	108
6.2.3	Walsh's Brownian Motion and Spider Martingales	109
6.3	Invariants of a Filtration	112
6.4	Further References	114
6.5	Exercises	114
7	Sketches of Solutions for the Exercises	117
	References	141
	Index	157

Random Times and Enlargements of Filtrations in a
Brownian Setting

Mansuy, R.; Yor, M.

2006, XIII, 158 p., Softcover

ISBN: 978-3-540-29407-8
