

Table of contents

Regulation of the heat shock response by heat shock transcription factors.....	1
Ville Hietakangas and Lea Sistonen	1
Abstract	1
1 Preface.....	1
2 Transcriptional regulation of the heat shock response in bacteria	2
3 Regulation of the eukaryotic heat shock response via heat shock elements.....	3
4 Heat shock factors constitute a conserved family of transcriptional regulators.....	4
5 HSF1 – the prototypical heat shock transcription factor	7
5.1 Modular structure of HSF1	7
5.2 Rapid and transient HSF1 DNA-binding activity in response to stress	8
5.3 Complex regulation of HSF1 transcriptional activity by post-translational modifications.....	8
5.4 Interactions between HSF1 and the transcriptional machinery	11
5.5 Negative and positive regulation of HSF1 by interacting proteins ...	12
5.6 Role of HSF1 in normal development and physiology	14
6 HSF2 – a cooperative modulator of HSF1?.....	15
7 HSF3 – an avian-specific regulator of heat shock genes	17
8 HSF4 – regulator of eye development.....	18
9 Novel functions for HSFs in transcription.....	18
9.1 Broad repertoire of HSF target genes	18
9.2 Regulation of longevity by HSF1	20
9.3 HSF1-dependent transcription of satellite III repeats previously considered as heterochromatin.....	21
10 Conclusions and perspectives.....	22
Acknowledgements	23
References	23
 The unfolded protein response unfolds.....	 35
Maho Niwa	35
Abstract	35
1 Endoplasmic reticulum (ER): the journey to secretion.....	35
2 The unfolded protein response (UPR) pathway.....	37
2.1 Yeast UPR	37
2.2 Non-conventional HAC1 mRNA splicing	37
2.3 Are there additional RNA substrates for yeast Ire1p?.....	39
2.4 UPR specific transcription factors in yeast	39
3 Mammalian UPR.....	40
3.1 IRE1	40

3.2 ATF6.....	42
3.3 PERK.....	43
3.4 Transcriptional output of three UPR signaling branches.....	46
4 Phospholipids and the UPR.....	47
5 UPR signaling arm specific components identified to date.....	48
5.1 IRE1 signaling branch.....	49
5.2 PERK signaling branch.....	49
5.3 ATF6 signaling branch.....	50
6 BiP associates with the luminal domains of IRE1, PERK, and ATF6.....	50
7 Time dependent shift of the UPR response.....	51
8 Physiological roles of the UPR.....	52
9 Conclusions.....	53
Acknowledgements.....	54
References.....	54
Hsp104p: a protein disaggregase.....	65
Johnny M. Tkach and John R. Glover.....	65
Abstract.....	65
1 Hsp104p and thermotolerance in yeast.....	65
2 <i>In vitro</i> reconstitution of Hsp104p refolding activity.....	68
3 Hsp100 structure and function.....	70
4 Mechanism of protein disaggregation.....	73
5 Organization of the bichaperone network.....	76
6 Yeast prions and Hsp104p.....	77
7 Implications for protein aggregation disease.....	82
8 Final Remarks.....	84
References.....	84
Folding of newly synthesised proteins in the endoplasmic reticulum.....	91
Sanjika Dias-Gunasekara and Adam M. Benham.....	91
Abstract.....	91
1 The scope of protein folding in the ER.....	91
2 Entry into the ER.....	92
3 ER protein sorting.....	93
4 Signal peptide cleavage.....	93
5 The proline problem.....	95
6 Folding of ER glycoproteins.....	96
7 BiP.....	100
8 Disulfide bond formation.....	100
9 Introducing more ER chaperones.....	104
10 Folding of specialised proteins in the ER.....	104
11 Techniques, model systems and what's next.....	106
Acknowledgements.....	107
References.....	107
Abbreviations.....	116

Quality control of proteins in the mitochondrion	119
Mark Nolden, Brigitte Kisters-Woike, Thomas Langer, and Martin Graef...	119
Abstract	119
1 Stability of mitochondria	119
2 Molecular chaperone proteins and mitochondrial proteolysis	121
3 ATP-dependent proteases of mitochondria	122
3.1 Mitochondrial Lon proteases	124
3.2 Mitochondrial Clp proteases	126
3.3 AAA proteases in the inner membrane	127
4 Quality control of inner membrane proteins	131
4.1 Substrate recognition by AAA proteases	132
4.2 Substrate dislocation during proteolysis by AAA proteases	133
4.3 Additional components of the quality control system	136
5 Regulation of quality control systems of mitochondria	136
References	137
 Chaperone proteins and peroxisomal protein import	 149
Wim de Jonge, Henk F. Tabak, and Ineke Braakman	149
Abstract	149
1 Introduction	149
2 Peroxisomes	150
2.1 Formation, maintenance, and function	150
2.2 General properties of protein import	153
2.3 Proteins involved in protein import	153
2.4 Formation of peroxisomes	155
2.5 Recycling receptor import model	156
2.6 Docking and translocation of peroxisomal proteins	158
2.7 Folding state and import of peroxisomal proteins	160
3 Involvement of Hsp70 in peroxisomal protein import	162
3.1 Hsp70 family introduction	162
3.2 <i>In vivo</i> roles of Hsp70	165
3.3 Hsp70 and import of proteins into organelles	166
3.4 Hsp70 and peroxisomal protein import	168
4 Involvement of Hsp90 in peroxisomal protein import	170
4.1 Hsp90 family introduction	170
4.2 <i>In vivo</i> roles of Hsp90	170
4.3 Hsp90 and import of proteins into organelles	171
4.4 Hsp90 and peroxisomal protein import	172
5 Concluding remarks	172
References	173
 Proteasomal degradation of misfolded proteins	 185
Robert Gauss, Oliver Neuber, and Thomas Sommer	185
Abstract	185
1 Introduction	185
2 Recognition and degradation of aberrant proteins in the cytosol	186

2.1 Hsp70 and Hsp90 chaperones – protein folding and re-folding	186
2.2 The ubiquitin-proteasome system	189
2.3 Some <i>U-box</i> ligases link chaperones to the ubiquitin-proteasome system	191
3 Protein degradation from the ER	195
3.1 Quality control in the ER and the unfolded protein response	195
3.2 The ER-associated protein degradation pathway	195
3.3 Selection and recruitment of aberrant proteins	196
3.4 Dislocation of terminally misfolded proteins	200
3.5 Ubiquitination of aberrant ER-resident proteins	202
3.6 Do E3 ligases play a central role in the ER degradation system?	202
3.7 Driving-force of dislocation	204
4 Cdc48p/p97 – chaperoning poly-ubiquitinated proteins	204
5 Diseases and toxins – what can go wrong in protein degradation?	206
5.1 Diseases associated with protein degradation	207
5.2 Viruses and AB-toxins	208
5.3 Pharmacological chaperones – a new approach in fighting folding diseases	209
6 Conclusions	211
Acknowledgement	211
References	212

Template-induced protein misfolding underlying prion diseases 221

Luc Bousset, Nicolas Fay, and Ronald Melki	221
Abstract	221
1 Prion diseases	221
2 Formulation of the prion hypothesis	222
3 The mammalian prion PrP	222
3.1 Identification	222
3.2 Structure	222
3.3 Folding properties	223
3.4 Function	223
3.5 Cellular processing	224
4 The prions in yeast and fungi	224
4.1 Genetic criteria for the prions in yeast and fungi	225
4.2 Characteristics	225
4.3 Structural features	228
5 Properties of the fibrillar forms of prion proteins	229
6 Soluble oligomeric forms of the prion proteins	231
7 Mechanistic models for prion propagation	231
8 Maintenance and inheritance	232
9 <i>In vitro</i> assembly process of prions proteins	234
10 Prions and misfolding diseases, unquestioned issues, and unanswered questions	237
11 Conclusions and perspectives	239
References	239

The Hsp60 chaperonins from prokaryotes and eukaryotes.....	251
M. Giulia Bigotti, Anthony R. Clarke, and Steven G. Burston.....	251
Abstract	251
1 The Group I chaperonins	251
1.1 Introduction.....	251
2 Structure of the Group I chaperonins	254
2.1 GroEL structure	254
2.2 GroES structure.....	255
2.3 The structure of the GroEL-ATP complex.....	255
2.4 The structure of the GroEL-GroES complexes	256
3 Interaction between Group I chaperonins and protein substrate.....	257
4 Allostery and asymmetry in nucleotide binding to GroEL.....	257
5 Reaction cycle of the Group I chaperonins	259
5.2 Encapsulation and the initiation of protein folding.....	261
5.3 Priming the complex for the release of GroES and polypeptide substrate	262
5.4 Ejection of the substrate and GroES from the <i>cis</i> ring.....	262
6 The Group I chaperonin-assisted protein folding reaction	263
7 The Group II chaperonins.....	264
7.1 Introduction.....	264
8 Group II chaperonin subunit composition and organization	266
9 Structure of the Group II chaperonins	267
10 Nucleotide-induced structural rearrangements in the Group II chaperonins	269
11 Allostery in the Group II chaperonins	271
12 Interaction between the Group II chaperonins and protein substrates..	273
13 Future perspectives.....	274
References	275
