

Contents

1	Biophysics: An Experimental Tool of Biology or the Physics of Animate Matter?.....	1
2	Statistical Description of Matter	7
2.1	Molecular Structure of Matter	7
2.2	The Principle of Mechanical Determinism	9
2.3	Irreversibility of Macroscopic Processes	12
2.4	Instability of Motion as the Origin of Irreversibility	16
2.5	Statistical Ensembles. Mixing and the Trend Toward Equilibrium	18
2.6	Probability and Entropy. The Mechanism of Entropy Increase	22
2.7	The Law of Large Numbers. Physical Realizations of Statistical Samples.....	26
2.8	The Relativity of Thermodynamic Equilibrium.....	32
3	Thermodynamic State	35
3.1	Global and Structural Thermodynamic Variables	35
3.2	The Clausius Entropy.....	39
3.3	Temperature and Thermodynamic Forces. Equations of State	42
3.4	Energy Transformations: Work, Heat and Dissipation	48
3.5	Free Energy and Bound Energy	52
3.6	Open Thermodynamic Systems: Steady State versus Dissipative Structures.....	57
3.7	Rate of Nonequilibrium Thermodynamic Processes	62
4	Origins and Evolution of Life	65
4.1	History in Physics	65
4.2	Initiation.....	67
4.3	Origins of the Prokaryotic Cell Machinery	70

4.4	The Photosynthetic Revolution	76
4.5	Origins and Structure of the Eukaryotic Cell. Further Stages of Evolution	80
4.6	The Main Metabolic Pathways. Enzymes	85
5	Molecular Biology of the Eukaryotic Cell.....	91
5.1	The Eukaryotic Cell as a System of Compartments	91
5.2	Membrane Channels and Pumps	94
5.3	Substrate, Oxidative, and Photo Phosphorylation	100
5.4	Cytoskeleton and Cell Motility: Microfilaments.....	111
5.5	Cytoskeleton and Cell Motility: Microtubules	120
5.6	Regulation of Enzyme Activity.....	123
5.7	Receptors	127
5.8	The Cell Cycle.....	137
6	Chemical Reactions	141
6.1	Single Unimolecular Reactions. The Chemical Equation of State	141
6.2	Transport Across Membranes	148
6.3	Bimolecular Reactions	152
6.4	Protolysis Reactions	155
6.5	Redox Reactions	158
6.6	Fuel Cells and Photocells. Biological Processes of Electron and Proton Transport .	162
6.7	Two Successive Reactions. The Steady State Approximation.....	166
6.8	Phenomenological Theory of Reaction Rates	169
7	Enzymatic Catalysis	173
7.1	Chemical Mechanisms of Enzymatic Catalysis	173
7.2	Steady-State Kinetics of Enzymatic Reactions with One Intermediate	177
7.3	Competitive and Noncompetitive Inhibition	183
7.4	Two-Substrate Enzyme	186
7.5	Allosteric Control of Enzymatic Activity	188
7.6	Oscillations in Enzymatic Reactions	192
8	Biological Free Energy Transduction	197
8.1	Isothermal Machines.....	197
8.2	Chemochemical Machines. The Necessity of Enzyme Intermediacy.....	201

8.3	Universality of the Enzymatic Mechanism of Free Energy Transduction	204
8.4	Molecular Pumps and Motors	209
8.5	Flux–Force Dependence	212
8.6	Biological Signal Transduction	219
9	Lack of Partial Thermodynamic Equilibrium	225
9.1	Two Classes of Experiments	225
9.2	Intramolecular Dynamics of Biomolecules	230
9.3	Enzyme in a Multitude of Conformational States	236
9.4	Two Coupled Enzymatic Processes: Case of the Actomyosin Motor	240
9.5	Flux–Force Dependence for the Actomyosin Motor	249
9.6	Biological Molecular Machines as Biased Maxwell Demons	259
A	Thermodynamic Supplement	263
A.1	Thermodynamics of Ideal Gases	263
A.2	Legendre Transformations	268
A.3	Capacities and Susceptibilities. Thermodynamic Stability	273
A.4	Canonical and Generalized Canonical Probability Distributions	276
A.5	Statistical Interpretation of Thermodynamics	281
B	Stochastic Processes	285
B.1	From Liouville’s Equation to the Diffusion Equation ...	285
B.2	Markov Processes	289
B.3	Stochastic Theory of Reaction Rates	296
B.4	Reaction Rate and the First-Passage Time Problem ...	302
B.5	One-Dimensional Diffusion in the Presence of a Sink ...	306
B.6	Diffusion in a Parabolic Potential	310
C	Structure of Biomolecules	315
C.1	Elementary Building Blocks	315
C.2	Generalized Ester Bonds	319
C.3	Directionality of Chemical Bonds	323
C.4	Hydrogen Bond. Amphiphilic Molecules in Water Environments	332
C.5	Protein Structures	336
C.6	Nucleic Acid Structures	343

D Dynamics of Biomolecules	349
D.1 Vibrations Versus Conformational Transitions	349
D.2 Conformational Transitions	
Within the Protein Native State	353
D.3 Protein-Glass Model	359
D.4 Protein-Machine Model	367
D.5 Calculation of Mean First-Passage Time	370
D.6 Nonadiabatic Processes of Charge and Energy Transfer	375
References	389
Index	413

The Thermodynamic Machinery of Life

Kurzynski, M.

2006, XIV, 431 p. 150 illus., Hardcover

ISBN: 978-3-540-23888-1
