

---

# Contents

<b>Introduction</b> .....	1
<b>1 Preliminaries</b> .....	3
1.1 Brief Sketch of Lebesgue's Integral .....	3
1.2 Convergence Concepts for Random Variables .....	7
1.3 The Lebesgue-Stieltjes Integral .....	10
1.4 Exercises .....	13
<b>2 Introduction to Itô-Calculus</b> .....	15
2.1 Stochastic Calculus vs. Classical Calculus .....	15
2.2 Quadratic Variation and 1-dimensional Itô-Formula ....	18
2.3 Covariation and Multidimensional Itô-Formula .....	26
2.4 Examples .....	31
2.5 First Application to Financial Markets .....	33
2.6 Stopping Times and Local Martingales .....	36
2.7 Local Martingales and Semimartingales .....	44
2.8 Itô's Representation Theorem .....	49
2.9 Application to Option Pricing .....	50
<b>3 The Girsanov Transformation</b> .....	55
3.1 Heuristic Introduction .....	55
3.2 The General Girsanov Transformation .....	58
3.3 Application to Brownian Motion .....	63
<b>4 Application to Financial Economics</b> .....	67
4.1 The Market Price of Risk and Risk-neutral Valuation ...	68
4.2 The Fundamental Pricing Rule .....	73
4.3 Connection with the PDE-Approach (Feynman-Kac Formula) .....	76

4.4	Currency Options and Siegel-Paradox . . . . .	78
4.5	Change of Numeraire . . . . .	79
4.6	Solution of the Siegel-Paradox . . . . .	84
4.7	Admissible Strategies and Arbitrage-free Pricing . . . . .	86
4.8	The “Forward Measure” . . . . .	89
4.9	Option Pricing Under Stochastic Interest Rates . . . . .	92
<b>5</b>	<b>Term Structure Models . . . . .</b>	<b>95</b>
5.1	Different Descriptions of the Term Structure of Interest Rates . . . . .	96
5.2	Stochastics of the Term Structure . . . . .	99
5.3	The HJM-Model . . . . .	102
5.4	Examples . . . . .	105
5.5	The “LIBOR Market” Model . . . . .	107
5.6	Caps, Floors and Swaps . . . . .	111
<b>6</b>	<b>Why Do We Need Itô-Calculus in Finance? . . . . .</b>	<b>113</b>
6.1	The Buy-Sell-Paradox . . . . .	114
6.2	Local Times and Generalized Itô Formula . . . . .	115
6.3	Solution of the Buy-Sell-Paradox . . . . .	120
6.4	Arrow-Debreu Prices in Finance . . . . .	121
6.5	The Time Value of an Option as Expected Local Time . .	123
<b>7</b>	<b>Appendix: Itô Calculus Without Probabilities . . . . .</b>	<b>125</b>
	<b>References . . . . .</b>	<b>135</b>

Introduction to Stochastic Calculus for Finance

A New Didactic Approach

Sondermann, D.

2006, X, 138 p., Softcover

ISBN: 978-3-540-34836-8
