
Contents

1	Introduction	1
2	Preliminaries	9
2.1	The Elastic String	9
2.2	Networks of Strings	14
2.2.1	Elements on Graphs	14
2.2.2	Equations of Motion for Networks	15
2.3	The Control Problem	21
2.3.1	Basic Definitions	21
2.3.2	An Equivalent Formulation of the Control Problem	22
2.4	A Controllability Theorem and its Limitations	24
3	Some Useful Tools	25
3.1	D'Alembert Formula and Boundary Observability of the $1 - d$ Wave Equation	25
3.1.1	D'Alembert Formula	25
3.1.2	Boundary Observability of the $1 - d$ Wave Equation	27
3.2	HUM	28
3.2.1	Description of the Method	28
3.2.2	Application to the Control of Networks	33
3.3	The Method of Moments	36
3.3.1	Description of the Method	36
3.3.2	Application to the Control of Networks	40
3.4	Riesz Bases and Ingham-Type Inequalities	45
3.4.1	Riesz Bases	45
3.4.2	Generalized Ingham Theorems	45
3.4.3	A New Inequality	49
4	The Three String Network	53
4.1	The Three String Network with Two Controlled Nodes	53
4.1.1	Equations of Motion of the Network	53

4.1.2	The Control Problem	55
4.2	A Simpler Problem: Simultaneous Control of Two Strings	57
4.2.1	Identification of Controllable Subspaces	61
4.3	The Three String Network with One Controlled Node	67
4.4	An Observability Inequality	69
4.5	Properties of the Sequence of Eigenvalues	76
4.6	Observability of the Fourier Coefficients	80
4.7	Study of the Weights c_n	81
4.8	Relation with the Simultaneous Control of Two Strings	87
4.9	Lack of Observability in Small Time	90
4.10	Application of the Method of Moments to Control	96
5	General Trees	103
5.1	Notations and Statement of the Problem	104
5.1.1	Notations for Graphs	104
5.1.2	Equations of Motion	105
5.2	The Operators \mathcal{P} and \mathcal{Q}	108
5.2.1	A Tree Formed by a Single String	108
5.2.2	Operators of Type S	108
5.2.3	Construction of \mathcal{P} and \mathcal{Q} in the General Case	114
5.2.4	The Action of \mathcal{P} and \mathcal{Q} at the Interior Nodes	116
5.2.5	Action of \mathcal{P} and \mathcal{Q} on the Solution	118
5.3	The Main Observability Result	119
5.4	Relation Between \mathcal{P} and \mathcal{Q} and the Spectrum	123
5.4.1	The Eigenvalue Problem	124
5.4.2	Further Properties of \mathcal{P} and \mathcal{Q}	129
5.5	Observability Results	131
5.5.1	Weighted Observability Inequalities	131
5.5.2	Non-degenerate Trees	133
5.5.3	On the Set of Non-degenerate Trees	135
5.6	Consequences Concerning Controllability	137
5.7	Simultaneous Observability and Controllability of Networks ...	138
5.8	Examples	142
5.8.1	The Star-Shaped Network with n Strings	142
5.8.2	Simultaneous Control of n Strings	144
5.8.3	A Non Star-Shaped Tree	146
6	Some Observability and Controllability Results for	
	General Networks	149
6.1	Spectral Control of General Networks	150
6.1.1	Asymptotic Behavior of the Eigenfunctions	150
6.1.2	Application to Control	154
6.2	Colored Networks	157
6.3	Optimality of Theorem 3.2.7	161
6.3.1	Simultaneous Control of Serially Connected Strings	162

7	Simultaneous Observation and Control from an Interior Region	167
7.1	Simultaneous Interior Control of Two Strings	168
7.1.1	Statement of the Problem	168
7.1.2	Control of Strings with Different Densities	170
7.1.3	Control of Strings with Equal Densities	174
7.2	Simultaneous Control on the Whole Domain	177
8	Other Equations on Networks	183
8.1	The Heat Equation	184
8.2	The Schrödinger Equation	187
8.3	A Model of Network for Beams	192
9	Final Remarks and Open Problems	197
9.1	Brief Description of the Main Results of the Book	197
9.1.1	Networks of Strings	197
9.1.2	Simultaneous Control of Strings	198
9.1.3	Other Equations on Networks	199
9.2	Future Lines of Research and Open Problems	199
	Some Consequences of Diophantine Approximation Theorems	205
	References	213
	Index	221

Wave Propagation, Observation and Control in 1-d
Flexible Multi-Structures

Dáger, R.; Zuazua, E.

2006, X, 230 p., Softcover

ISBN: 978-3-540-27239-7
