

Table of contents

Energy Technologies

Subvolume C: Renewable Energy

	Title page	I
	List of Autors	V
	Preface	VII
1	Survey of renewable energy [K. HEINLOTH]	1
1.1	Introduction: Renewable energy in the past, at present and in the future	1
1.2	Worldwide demand on energy and potential of renewable energy	2
1.3	Technologies to convert renewable primary energy	5
1.4	Possible utilization of the different kinds of renewable energy	7
1.4.1	Hydropower to produce electricity	7
1.4.2	Wind energy.....	7
1.4.3	Sun light.....	7
1.4.4	Biomass.....	8
1.4.5	Heat from earth interior	8
1.4.6	Heat from water, soil and air.....	9
1.4.7	Survey of main obstacles to increase the use of renewable energy by large	9
1.5	Synergy effects of extensive use of renewable energy	9
1.6	References for 1	10
2	Hydroelectric power	11
2.1	Introduction to hydroelectric power [TH. STROBL, F. ZUNIC].....	11
2.1.1	Development of hydro power	12
2.1.2	Water power equation	14
2.1.3	Energy output.....	15
2.1.4	Economical aspects of water power.....	17
2.1.5	References for 2.1 and additional literature	18
2.2	River power plants [TH. STROBL, F. ZUNIC]	19
2.2.1	Types of river power plants	19
2.2.1.1	Storage capacity	19
2.2.1.2	Pressure head	20
2.2.1.3	Installed capacity	20
2.2.1.4	Other definitions	20
2.2.2	Positioning river power plants	21
2.2.3	Diversion canal power plants.....	22
2.2.4	Components of hydroelectric plants	23
2.2.4.1	Power house.....	23
2.2.4.2	Turbine layout.....	24
2.2.4.3	Cavitation.....	26
2.2.5	Auxiliary Buildings.....	27
2.2.5.1	Weir	27
2.2.5.2	Sluice	28
2.2.6	Ecological aspects of hydro power plants.....	29

2.2.6.1	Residual flow	29
2.2.6.2	Fish passages	31
2.2.6.3	Effects on the groundwater table	32
2.2.7	References for 2.2	33
2.3	High pressure power plants [E. PUERER, G. GOEKLER].....	34
2.3.1	Introduction.....	34
2.3.1.1	Purpose and demand	34
2.3.1.1.1	Energy production	34
2.3.1.1.2	Multi purpose schemes	34
2.3.1.2	Layout and design.....	35
2.3.1.2.1	Catchment area inflow, water intake altitude.....	35
2.3.1.2.2	Reservoir volume, storage capacity	37
2.3.1.2.3	Determination of capacity of a HPPP	37
2.3.1.2.4	Efficiency of HPPPs	37
2.3.2	Types of high pressure power plants	38
2.3.2.1	General aspects	38
2.3.2.2	HPPP with reservoir	38
2.3.2.3	HPPP without reservoir	39
2.3.2.4	HPPP at the toe of a high dam	40
2.3.3	Intake and storage.....	40
2.3.3.1	Concrete dams.....	40
2.3.3.1.1	Gravity dams.....	42
2.3.3.1.1.1	Constructive particularities for mass concrete	43
2.3.3.1.1.2	Special methods of construction: RCC and RCD	43
2.3.3.1.2	Arch dams.....	44
2.3.3.1.3	Other types of concrete dams.....	45
2.3.3.2	Earth- and rockfill dams	45
2.3.3.2.1	Types, conception and linings	46
2.3.3.2.2	Foundation, sealing in the subsoil.....	47
2.3.3.3	Safety aspects of dams.....	48
2.3.3.4	Intake structures for diversion	49
2.3.3.4.1	Intake structure (weir).....	49
2.3.3.4.2	Power intake	50
2.3.3.5	Bottom and medium outlets	50
2.3.3.6	Spillways.....	51
2.3.3.6.1	Types of spillways	51
2.3.3.6.2	Transition and energy dissipation	52
2.3.4	Water conduits for a HPPP	53
2.3.4.1	Free surface canals.....	53
2.3.4.2	Free surface tunnels	53
2.3.4.3	Pressure tunnels	54
2.3.4.3.1	Tunnels without lining and sealing.....	55
2.3.4.3.2	Tunnels with lining and without sealing.....	55
2.3.4.3.3	Tunnels with lining and sealing	56
2.3.4.3.3.1	Pre-stressed concrete lining	56
2.3.4.3.3.2	Lining with plastic membranes	56
2.3.4.3.3.3	Steel lining	56
2.3.4.3.3.4	Thin-walled steel lining	57
2.3.4.3.3.5	Pressure tunnels with conventional or pre-stressed reinforcement	57
2.3.4.4	Surge tanks.....	57
2.3.4.5	Pressure shaft.....	59
2.3.4.6	Penstocks	59
2.3.4.6.1	Penstock manifold.....	60

2.3.5	Powerhouse of a HPPP	61
2.3.5.1	General arrangement of the powerhouse	61
2.3.5.2	Open air powerhouse	63
2.3.5.3	Underground power stations.....	63
2.3.5.4	Powerhouse at the toe of high dams	64
2.3.5.5	Tailrace	65
2.3.6	Economical aspects.....	66
2.3.6.1	Investment costs.....	66
2.3.6.2	Costs for operation and maintenance.....	67
2.3.6.3	Service life	67
2.3.6.4	Energy costs, price.....	67
2.3.7	Further aspects of HPPPs.....	67
2.3.7.1	Sedimentation	67
2.3.7.2	Effects of a HPPP on the ecology	68
2.3.7.3	Reflections on flood dimensioning	69
2.3.8	Examples of HPPPs and PPs at the toe of a dam.....	70
2.3.9	References for 2.3	71
2.4	Mechanical and electrical design of the TGP [D. YUAN, Z. TIAN, S. WANG]	73
2.4.1	Introduction of the Three Gorges Project	73
2.4.2	Content and characteristics of the mechanical and electrical design	75
2.4.2.1	The design content of the mechanic and electric engineering	75
2.4.2.2	Characteristics and principles of the mechanical and electrical design	75
2.4.3	Hydro-turbine generator units with a rated power of 700 MW	77
2.4.3.1	Basic conditions for the selection of units	77
2.4.3.2	Measures for main technical problems	78
2.4.3.2.1	Study on stability of Francis turbines	78
2.4.3.2.2	Alternatives of temporary runners	78
2.4.3.2.3	Time limit for the installation of units	79
2.4.3.2.4	Study on anti-vibration of the powerhouse.....	80
2.4.3.2.5	Cooling method of the generator	80
2.4.3.2.6	Arrangement of the thrust bearing	80
2.4.3.3	The turbine.....	81
2.4.3.3.1	Basic characteristics of the power station	81
2.4.3.3.1.1	Water levels and discharges of the power station	81
2.4.3.3.1.2	Operating parameters of the power station	81
2.4.3.3.1.3	Probability occurrence of the various heads	82
2.4.3.3.1.4	Power station operation modes	82
2.4.3.3.1.5	Tail water levels.....	83
2.4.3.3.1.6	Special requirements for the TGP turbine operation	84
2.4.3.3.2	Basic characteristics and main parameters of the turbine	84
2.4.3.3.2.1	Type of the turbine.....	84
2.4.3.3.2.2	Specific rating.....	84
2.4.3.3.2.3	Optional speed	85
2.4.3.3.2.4	Cavitation coefficient and setting	85
2.4.3.3.2.5	Operational range.....	85
2.4.3.3.2.6	Turbine efficiency and energy production	86
2.4.3.3.2.7	Cavitation damage	88
2.4.3.3.2.8	Cracking guarantee of the runner.....	88
2.4.3.3.3	Model tests.....	88
2.4.3.3.3.1	Efficiency and output.....	89
2.4.3.3.3.2	Cavitation.....	90
2.4.3.3.3.3	Operating stability.....	90

2.4.3.3.3.4	Hydraulic thrust	92
2.4.3.3.4	Structure of main parts	93
2.4.3.3.4.1	General arrangement.....	93
2.4.3.3.4.2	Stay ring.....	93
2.4.3.3.4.3	Spiral case	93
2.4.3.3.4.4	Gate operating mechanism.....	95
2.4.3.3.4.5	Runner and connection between runner and main shaft	96
2.4.3.3.4.6	Bottom ring and head cover.....	96
2.4.3.3.4.7	Turbine shaft and shaft seal	97
2.4.3.3.4.8	Air admission system.....	97
2.4.3.4	Generator	97
2.4.3.4.1	Main parameters and performance of the generator	97
2.4.3.4.2	Structures, dimensions and weights of the generator main components.....	99
2.4.3.4.2.1	Stator.....	100
2.4.3.4.2.2	Rotor	101
2.4.3.4.2.3	Bearings of the generator.....	102
2.4.3.4.2.4	Generator shafts	103
2.4.3.4.2.5	Upper and lower brackets	104
2.4.3.4.3	Stability of the generator.....	104
2.4.3.4.4	Rigidity and strength.....	105
2.4.3.4.5	Generator cooling method and cooling system.....	105
2.4.3.4.6	The generator neutral point grounding system	107
2.4.4	Electrical design.....	109
2.4.4.1	Integration of the power station into the power system	109
2.4.4.2	Electric main single line diagram.....	110
2.4.4.2.1	Combination between generator and transformer.....	111
2.4.4.2.2	Diagram of the 500 kV switchgear	112
2.4.4.3	Selection of the main electric equipment.....	112
2.4.4.4	Explanation of the main technical issues	114
2.4.4.4.1	Partial discharge level.....	114
2.4.4.4.2	Insulation level.....	114
2.4.4.4.3	Very fast transient over voltage (VFTO).....	114
2.4.4.4.4	100% breaking DC component of circuit breaker	116
2.4.4.5	Arrangement of the electric equipment.....	116
2.4.5	Automation of the Three Gorges-Gezhouba cascade project	118
2.4.5.1	Functions of the system	118
2.4.5.1.1	Functions of the cascade dispatch level	118
2.4.5.1.2	Functions of the station subsystem level.....	118
2.4.5.1.3	Functions of the local level	120
2.4.5.2	System structure.....	120
2.4.5.3	Main technical characteristics of the system.....	120
2.4.5.4	Communication of the computer supervisory control system.....	121
2.4.6	Communication of the Three Gorges-Gezhouba cascade project.....	122
2.4.6.1	Functions of the communication system.....	122
2.4.6.2	Scheme of the communication system.....	122
2.4.6.3	Supervision and management system of communication network	123
2.4.7	Electric drive and control of the double-line continuous 5-level ship lock	124
2.4.7.1	Electric drive and control of miter gates and the culvert valves	124
2.4.7.2	Central auto supervisory control of integral operation for the permanent ship lock.....	127
2.4.8	Economical aspects of the Three Gorges Project.....	128
2.5	Tidal power plants (TPP) [WON-OH SONG, W. VAN WALSUM].....	129

2.5.1	Introduction.....	129
2.5.2	The tides.....	130
2.5.2.1	Cause and effect.....	130
2.5.2.2	Characteristics.....	131
2.5.2.3	Resonance	131
2.5.2.4	Energy potential	132
2.5.2.5	Coastal zones with substantial tides.....	133
2.5.3	Schemes and operating modes of TPPs	134
2.5.4	Preliminary assessment of the annual energy potential of single-basins TPPs.....	138
2.5.4.1	Application of the modeling technique to a single, high-basin TPP.....	140
2.5.4.1.1	Geography and hydrography of the chosen site.....	140
2.5.4.1.2	Sluicing	140
2.5.4.1.3	Power generation	141
2.5.4.1.4	Change in water level L_h of high basin	141
2.5.4.1.5	Building and operating the model.....	141
2.5.4.2	Application of the modeling technique to a single, low-basin TPP.....	142
2.5.5	The economic value of tidal energy.....	142
2.5.5.1	Economic fringe benefits	143
2.5.6	Tidal power engineering since the 1960's	143
2.5.6.1	The La Rance TPP.....	144
2.5.6.1.1	Purpose	144
2.5.6.1.2	The site.....	144
2.5.6.1.3	The plant	144
2.5.6.1.4	Construction.....	145
2.5.6.1.5	Operation	146
2.5.6.1.6	Environment	149
2.5.6.1.7	Cost of energy.....	149
2.5.6.2	The Annapolis pilot TPP.....	149
2.5.6.3	The Kislaya Guba pilot TPP	151
2.5.6.4	Tidal power applications in China	152
2.5.6.4.1	The Jiangxia experimental TPP	152
2.5.6.4.2	The Shashan TPP.....	154
2.5.6.4.3	The Haishan TPP	154
2.5.6.4.4	The Xingfuyang TPP	154
2.5.6.5	Environmentally-oriented pilot TPPs	154
2.5.7	Layout and civil works design of a TPP	155
2.5.7.1	Construction in the dry	156
2.5.7.2	Construction in the wet.....	156
2.5.7.3	Power plant design.....	157
2.5.7.4	Sluiceway design	158
2.5.7.5	Numerical, hydraulic and hybrid models as tools for design and construction planning ..	158
2.5.8	Some rules-of-thumb for assessing tidal power potentials	159
2.5.9	The future of tidal energy	160
2.5.9.1	Environmental concerns	161
2.5.9.2	Lack of confidence in cost estimates	161
2.5.9.3	Concern about the value of tidal energy	161
2.5.10	References for 2.5	162
2.6	Pumped storage power plants [W. BOGENRIEDER]	165
2.6.1	Basic aspects.....	165
2.6.2	Upper and lower reservoirs.....	168
2.6.2.1	Natural reservoirs.....	169
2.6.2.2	Artificial reservoirs	169

2.6.3	Intake and outlet structures	172
2.6.3.1	Lateral intakes.....	172
2.6.3.2	Intake towers.....	173
2.6.4	Power stations.....	173
2.6.4.1	Basics.....	173
2.6.4.2	Preliminary exploration	174
2.6.4.3	Preliminary design	174
2.6.4.3.1	Cavern geometry.....	174
2.6.4.3.2	Location of the cavern	175
2.6.4.3.3	Layout of the parallel and auxiliary structures.....	175
2.6.4.3.4	Stability calculations.....	175
2.6.4.3.4.1	Determination of geotechnical design parameters	175
2.6.4.3.4.2	Calculation methods	176
2.6.4.3.5	Safety measures	176
2.6.4.3.6	Dimensions of steel reinforced concrete.....	176
2.6.4.3.7	Supervision of structures	176
2.6.4.4	Hints on construction performance.....	176
2.6.5	Penstocks and tailrace.....	177
2.6.5.1	Headrace pipelines.....	177
2.6.5.1.1	Non-lined pressure shafts.....	178
2.6.5.1.2	Simple concrete lining	178
2.6.5.1.3	Reinforced concrete lining.....	178
2.6.5.1.4	Concrete lining with sealing foil.....	178
2.6.5.1.5	Thin-walled steel liner with concrete inner ring	178
2.6.5.1.6	Thick-walled steel liner	179
2.6.5.2	Tailrace tunnel	179
2.6.6	Surge tanks.....	180
2.6.7	Shut-off devices.....	180
2.6.8	Mechanical equipment.....	181
2.6.8.1	Conventional construction	181
2.6.8.2	Reversible pump turbines	183
2.6.8.2.1	Design	183
2.6.8.2.2	Efficiency.....	183
2.6.8.2.3	Controllability.....	184
2.6.8.2.4	Pump turbines with variable speed	184
2.6.8.2.4.1	Turbine operation.....	184
2.6.8.2.4.2	Pump operation	185
2.6.9	Electrical equipment	186
2.6.9.1	Motor-generator.....	186
2.6.9.2	Exciters	187
2.6.9.3	Starting device	187
2.6.9.4	Switching devices	188
2.6.9.5	Unit transformer.....	189
2.6.9.6	Network connection.....	189
2.6.9.7	Station service system.....	190
2.6.9.8	I&C and protective system.....	190
2.6.10	Case study – Goldisthal PSP.....	191
2.6.11	References for 2.6.....	196
2.7	Turbines for hydroelectric power [W. BRAITSCH, H. HAAS]	197
2.7.1	Introduction.....	197
2.7.1.1	Theory of turbines.....	197
2.7.1.2	Types of turbines	200

2.7.2	Francis turbines.....	202
2.7.2.1	Example and working principle of a Francis turbine.....	203
2.7.2.2	Hydraulic design of a Francis runner.....	203
2.7.2.3	Manufacture of a Francis runner.....	204
2.7.2.4	Operating problems with Francis turbines.....	204
2.7.2.5	Pump turbines.....	205
2.7.3	Kaplan turbines.....	206
2.7.3.1	Example and working principle of a Kaplan turbine.....	206
2.7.3.2	Hydraulic design of a Kaplan runner.....	209
2.7.3.3	Manufacture of a Kaplan runner.....	209
2.7.3.4	Operating problems with Kaplan turbines.....	209
2.7.3.5	Comparison between Kaplan turbines and Francis turbines.....	210
2.7.3.6	Tubular turbines.....	210
2.7.3.6.1	Example and working principle of a tubular turbine.....	210
2.7.3.6.2	Types of tubular turbines.....	212
2.7.3.7	Comparison between tubular and conventional Kaplan turbines.....	212
2.7.4	Pelton turbines.....	213
2.7.4.1	Example and working principle of a Pelton turbine.....	213
2.7.4.2	Hydraulic design of a Pelton runner.....	215
2.7.4.3	Manufacture of a Pelton runner.....	215
2.7.4.4	Peculiarities and operating problems of Pelton turbines.....	215
2.7.4.5	Comparison between Pelton and Francis turbines.....	216
2.7.5	Michell-Bánki turbines.....	216
2.7.5.1	Example and working principle of a Michell-Bánki turbine.....	216
2.7.6	Performance and control of turbines.....	217
2.7.6.1	Basic considerations.....	217
2.7.6.2	Performance characteristics of turbines.....	219
2.7.7	Costs of turbines.....	221
2.7.8	References for 2.7 and additional literature.....	222
3	Wind energy conversion [H.-J. WAGNER].....	223
3.1	History.....	223
3.2	Different converter types: an overview.....	224
3.3	Physical basics.....	225
3.3.1	Origin of wind energy.....	225
3.3.2	Energy content of the wind.....	226
3.3.3	Energy conversion on a blade.....	227
3.3.4	Power coefficients.....	228
3.3.4.1	Betz' law and the power coefficient c_p	228
3.3.4.2	Tip speed ratio.....	229
3.3.4.3	Power efficiency.....	229
3.4	Technical design of converters.....	231
3.4.1	The design with gearbox.....	231
3.4.2	The design without gearbox.....	231
3.4.3	The Multibrid design.....	231
3.4.4	Aspects of design.....	233
3.4.4.1	The tower.....	233
3.4.4.2	Heat energy.....	233
3.4.4.3	Control and monitoring.....	233
3.4.4.4	Mechanical stability.....	233
3.4.4.5	Wind direction set-up.....	234

3.4.5	Technical figures for two modern wind converters	234
3.5	Connection to the electrical grid	235
3.5.1	Requirements of the grid.....	235
3.5.2	Adaptation of grid frequency and speed of electrical generator	236
3.5.3	Special aspects of the connection of offshore wind parks	236
3.6	Use of wind energy	237
3.6.1	World-wide status	237
3.6.2	Federal Republic of Germany	237
3.7	Economical and environmental aspects	239
3.7.1	Environmental comparison	239
3.7.2	Energy payback time	239
3.8	Outlook	241
3.9	References for 3	241
4	Solar power.....	242
4.1	Solar thermal power plants [A. NEUMANN].....	242
4.1.1	Overview.....	242
4.1.2	Principles of the technology of solar thermal power plants	243
4.1.2.1	Solar radiation.....	243
4.1.2.2	Solar brightness distribution	247
4.1.2.3	Optical principles	248
4.1.2.4	Concentration of radiation	248
4.1.2.5	Parabolic geometry	249
4.1.2.6	Fresnel geometry.....	251
4.1.2.7	Non-imaging optics.....	251
4.1.3	Designs for concentrating solar radiation	252
4.1.3.1	Paraboloidal reflector.....	252
4.1.3.2	Spherical reflector.....	253
4.1.3.3	Hemispherical bowl concentrator	253
4.1.3.4	Two-stage heliostat concentrator design.....	254
4.1.3.5	Concentrating heliostats and tower	255
4.1.3.6	Beam down tower design.....	255
4.1.3.7	Parabolic trough reflector	255
4.1.4	Solar to thermal energy conversion	256
4.1.4.1	General consideration	256
4.1.4.2	Energy flow in a solar thermal power plant.....	258
4.1.4.3	Schematic solar thermal power plant.....	259
4.1.5	Receiver designs	260
4.1.5.1	External receiver	260
4.1.5.2	Evacuated tube receiver	261
4.1.5.3	Internal cavity receiver	261
4.1.5.4	Volumetric receiver	262
4.1.5.5	Direct absorption receiver.....	262
4.1.5.6	Comparison of receivers	263
4.1.6	Storing thermal energy.....	263
4.1.7	Solar thermal power plants	266
4.1.7.1	Solar pond power plant.....	266
4.1.7.2	Solar chimney power plant	267
4.1.7.3	Parabolic trough power plant.....	268
4.1.7.4	Dish power plant.....	271

4.1.7.5	Central receiver power plant.....	273
4.1.8	Comparison of solar thermal power plants	275
4.1.8.1	Performance	275
4.1.8.2	Costs	276
4.1.9	Outlook	277
4.1.10	References for 4.1	278
4.2	Photovoltaic power generation [A. GOETZBERGER]	280
4.2.1	Introduction, PV markets	280
4.2.2	Principles of photovoltaic cells	280
4.2.3	Potential and relevance of photovoltaic solar energy	283
