Foreword	vii
I Notes on String Topology	
<i>Ralph L. Cohen and Alexander A. Voronov</i>	1
Introduction	3
1 Intersection theory in loop spaces	5
1.1 Intersections in compact manifolds	6
1.2 The Chas-Sullivan loop product	8
1.3 The BV structure and the string bracket	10
1.4 A stable homotopy point of view	15
1.5 Relation to Hochschild cohomology	19
2 The cacti operad	25
2.1 PROPs and operads	25
2.1.1 PROP's	25
2.1.2 Algebras over a PROP	26
2.1.3 Operads	27
2.1.4 Algebras over an operad	28
2.1.5 Operads via generators and relations	36
2.2 The cacti operad	38
2.3 The cacti action on the loop space	43
2.3.1 Action via correspondences	43
2.3.2 The BV structure	45
3 String topology as field theory	47
3.1 Field theories	47
3.1.1 Topological Field Theories	47
3.1.2 (Topological) Conformal Field Theories	51
3.1.3 Examples	51
3.1.4 Motivic TCFTs	53
3.2 Generalized string topology operations	53
3.3 Open-closed string topology	61
4 A Morse theoretic viewpoint	67
4.1 Cylindrical gradient graph flows	67
4.2 Cylindrical holomorphic curves in T^*M	72

5	Brane topology	79
5.1	The higher-dimensional cacti operad	79
5.2	The cacti action on the sphere space	81
5.3	The algebraic structure on homology	82
5.4	Sphere spaces and Hochschild homology	84
	Bibliography	89
II	An Algebraic Model for Mod 2 Topological Cyclic Homology	
	<i>Kathryn Hess</i>	97
	Preface	99
1	Preliminaries	103
1.1	Elementary definitions, terminology and notation	103
1.2	The canonical, enriched Adams-Hilton model	106
1.2.1	Twisting cochains	106
1.2.2	Strongly homotopy coalgebra and comodule maps	106
1.2.3	The canonical Adams-Hilton model	108
1.3	Noncommutative algebraic models of fiber squares	109
2	Free loop spaces	115
2.1	A simplicial model for the free loop space	115
2.1.1	The general model	115
2.1.2	Choosing the free loop model functorially	118
2.2	The multiplicative free loop space model	121
2.2.1	The diagonal map	121
2.2.2	The path fibration	122
2.2.3	The free loop space model	124
2.3	The free loop model for topological spaces	126
2.4	Linearization of the free loop model	133
3	Homotopy orbit spaces	139
3.1	A special family of primitives	139
3.2	A useful resolution of CU_*ES^1	141
3.3	Modeling S^1 -homotopy orbits	142
3.4	The case of the free loop space	144
4	A model for mod 2 topological cyclic homology	153
4.1	The p^{th} - power map	153
4.2	Topological cyclic homology	157
	Bibliography	161
