Foreword	xi
Notation	xii
1 Examples and Motivations	
1.1 Elliptic equations on \mathbb{R}^n	1
1.1.1 The subcritical case	2
1.1.2 The critical case: the Scalar Curvature Problem	3
1.2 Bifurcation from the essential spectrum	5
1.3 Semiclassical standing waves of NLS	6
1.4 Other problems with concentration	8
1.4.1 Neumann singularly perturbed problems	8
1.4.2 Concentration on spheres for radial problems	9
1.5 The abstract setting	10
2 Perturbation in Critical Point Theory	
2.1 A review on critical point theory	13
2.2 Critical points for a class of perturbed functionals, I	19
2.2.1 A finite-dimensional reduction: the Lyapunov-Schmidt method revisited	20
2.2.2 Existence of critical points	22
2.2.3 Other existence results	24
2.2.4 A degenerate case	26
2.2.5 A further existence result	27
2.2.6 Morse index of the critical points of I_ε	29
2.3 Critical points for a class of perturbed functionals, II	29
2.4 A more general case	33

3	Bifurcation from the Essential Spectrum	
3.1	A first bifurcation result	35
3.1.1	The unperturbed problem	36
3.1.2	Study of G	37
3.2	A second bifurcation result	39
3.3	A problem arising in nonlinear optics	41
4	Elliptic Problems on \mathbb{R}^n with Subcritical Growth	
4.1	The abstract setting	45
4.2	Study of the $\text{Ker}[I_0''(z_\xi)]$	47
4.3	A first existence result	50
4.4	Another existence result	52
5	Elliptic Problems with Critical Exponent	
5.1	The unperturbed problem	59
5.2	On the Yamabe-like equation	62
5.2.1	Some auxiliary lemmas	63
5.2.2	Proof of Theorem 5.3	66
5.2.3	The radial case	67
5.3	Further existence results	68
6	The Yamabe Problem	
6.1	Basic notions and facts	73
6.1.1	The Yamabe problem	74
6.2	Some geometric preliminaries	76
6.3	First multiplicity results	80
6.3.1	Expansions of the functionals	80
6.3.2	The finite-dimensional functional	82
6.3.3	Proof of Theorem 6.2	86
6.4	Existence of infinitely-many solutions	88
6.4.1	Proof of Theorem 6.3 completed	90
6.5	Appendix	92
7	Other Problems in Conformal Geometry	
7.1	Prescribing the scalar curvature of the sphere	101
7.2	Problems with symmetry	105
7.2.1	The perturbative case	105
7.3	Prescribing Scalar and Mean Curvature	
	on manifolds with boundary	109
7.3.1	The Yamabe-like problem	109
7.3.2	The Scalar Curvature Problem with	
	boundary conditions	111

8 Nonlinear Schrödinger Equations	
8.1 Necessary conditions for existence of spikes	115
8.2 Spikes at non-degenerate critical points of V	117
8.3 The general case: Preliminaries	121
8.4 A modified abstract approach	123
8.5 Study of the reduced functional	131
9 Singularly Perturbed Neumann Problems	
9.1 Preliminaries	135
9.2 Construction of approximate solutions	138
9.3 The abstract setting	143
9.4 Proof of Theorem 9.1	146
10 Concentration at Spheres for Radial Problems	
10.1 Concentration at spheres for radial NLS	151
10.2 The finite-dimensional reduction	153
10.2.1 Some preliminary estimates	154
10.2.2 Solving $PI'_\varepsilon(z + w) = 0$	156
10.3 Proof of Theorem 10.1	159
10.3.1 Proof of Theorem 10.1 completed	160
10.4 Other results	160
10.5 Concentration at spheres for (N_ε)	162
10.5.1 The finite-dimensional reduction	163
10.5.2 Proof of Theorem 10.12	166
10.5.3 Further results	171
Bibliography	173
Index	181
