Editorial Introduction	ix
-------------------------------------	----

D. Alpay and I. Gohberg

**Discrete Analogs of Canonical Systems with Pseudo-exponential Potential.
Definitions and Formulas for the Spectral Matrix Functions**

1	Introduction	2
2	Review of the continuous case	4
2.1	The asymptotic equivalence matrix function	4
2.2	The other characteristic spectral functions	8
2.3	The continuous orthogonal polynomials	14
2.4	Perturbations	16
3	The discrete case	19
3.1	First-order discrete system	19
3.2	The asymptotic equivalence matrix function	22
3.3	The reflection coefficient function and the Schur algorithm	27
3.4	The scattering function	29
3.5	The Weyl function and the spectral function	31
3.6	The orthogonal polynomials	33
3.7	The spectral function and isometries	37
4	Two-sided systems and an example	39
4.1	Two-sided discrete first-order systems	39
4.2	An illustrative example	41
	References	44

Matrix- J -unitary Non-commutative Rational Formal Power Series ...

1	Introduction	51
2	Preliminaries	54
3	More on observability, controllability, and minimality in the non-commutative setting	60
4	Matrix- J -unitary formal power series: A multivariable non-commutative analogue of the line case	67
4.1	Minimal Givone–Roesser realizations and the Lyapunov equation	68

4.2	The associated structured Hermitian matrix	72
4.3	Minimal matrix- J -unitary factorizations	74
4.4	Matrix-unitary rational formal power series	75
5	Matrix- J -unitary formal power series:	
	A multivariable non-commutative analogue of the circle case	77
5.1	Minimal Givone–Roesser realizations and the Stein equation	77
5.2	The associated structured Hermitian matrix	83
5.3	Minimal matrix- J -unitary factorizations	84
5.4	Matrix-unitary rational formal power series	85
6	Matrix- J -inner rational formal power series	87
6.1	A multivariable non-commutative analogue of the half-plane case	87
6.2	A multivariable non-commutative analogue of the disk case	91
7	Matrix-selfadjoint rational formal power series	96
7.1	A multivariable non-commutative analogue of the line case	96
7.2	A multivariable non-commutative analogue of the circle case	100
8	Finite-dimensional de Branges–Rovnyak spaces and backward shift realizations: The multivariable non-commutative setting	102
8.1	Non-commutative formal reproducing kernel Pontryagin spaces	102
8.2	Minimal realizations in non-commutative de Branges–Rovnyak spaces	106
8.3	Examples	110

The Bezout Integral Operator: Main Property and Underlying Abstract Scheme	225
1 Introduction	226
2 Spectral theory of entire matrix functions	228
2.1 A review of the spectral data of an analytic matrix function	229
2.2 Eigenvalues and Jordan chains in terms of realizations	232
2.3 Common eigenvalues and common Jordan chains in terms of realizations	234
2.4 Common spectral data of entire matrix functions	237
3 The null space of the Bezout integral operator	241
3.1 Preliminaries on convolution integral operators	242
3.2 Co-realizations for the functions $\mathcal{A}, \mathcal{B}, \mathcal{C}, \mathcal{D}$	244
3.3 Quasi commutativity in operator form	248
3.4 Intertwining properties	251
3.5 Proof of the first main theorem on the Bezout integral operator	254
4 A general scheme for defining Bezout operators	256
4.1 A preliminary proposition	257
4.2 Definition of an abstract Bezout operator	260
4.3 The Haimovici-Lerer scheme for defining an abstract Bezout operator	262
4.4 The Bezout integral operator revisited	264
4.5 The null space of the Bezout integral operator	266
