Preface	xi
1 How to Measure Smoothness	
1.1 Introduction	1
1.2 Concrete spaces	2
1.3 The Fourier-analytical approach	4
1.4 Local means	9
1.5 Atoms	12
1.5.1 Smooth atoms	12
1.5.2 Non-smooth atoms	15
1.5.3 A technical modification	18
1.6 Quarks	19
1.7 Wavelet bases	26
1.7.1 Multiresolution analysis	26
1.7.2 Haar wavelets	28
1.7.3 Smooth wavelets	30
1.8 Wavelet frames	35
1.9 Envelopes	39
1.9.1 Sharp embeddings	40
1.9.2 The critical case	45
1.9.3 The super-critical case	48
1.9.4 The sub-critical case	51
1.9.5 Some generalisations and further references	52
1.10 Compactness in quasi-Banach spaces	55
1.11 Function spaces on domains	58
1.11.1 General domains: definitions, embeddings	58
1.11.2 General domains: entropy numbers	60
1.11.3 General domains: atoms	61
1.11.4 Lipschitz domains: definitions	63
1.11.5 Lipschitz domains: extension	64
1.11.6 Lipschitz domains: subspaces	66

1.11.7	Lipschitz domains: approximation numbers	67
1.11.8	Lipschitz domains: interpolation	69
1.11.9	Characterisations by differences	72
1.11.10	Lipschitz domains: Sobolev, Hölder-Zygmund spaces	76
1.11.11	General domains: sharp embeddings and envelopes	77
1.12	Fractal measures	78
1.12.1	An introduction to the non-smooth	78
1.12.2	Radon measures	80
1.12.3	The μ -property	81
1.13	Fractal operators	85
1.13.1	The classical theory	85
1.13.2	The fractal theory	87
1.14	Fractal characteristics of measures	92
1.15	Isotropic measures	95
1.15.1	Some notation and basic assertions	95
1.15.2	Traces and fractal operators	97
1.16	Weyl measures	99
1.17	Spaces on fractals and on quasi-metric spaces	101
1.17.1	Fractal characteristics, revisited	101
1.17.2	Traces and trace spaces	103
1.17.3	Quarkonial representations	109
1.17.4	Quasi-metric spaces	112
1.17.5	Spaces on quasi-metric spaces	115
1.17.6	Function spaces on d -spaces	119
1.18	Fractal characteristics of distributions	121
1.19	A black sheep becomes the king	122
2	Atoms and Pointwise Multipliers	
2.1	Notation, definitions and basic assertions	127
2.1.1	An introductory remark	127
2.1.2	Basic notation	127
2.1.3	Spaces on Euclidean n -space	128
2.1.4	Smooth atoms	130
2.2	Non-smooth atomic decompositions	131
2.3	Pointwise multipliers and self-similar spaces	136
2.3.1	Definitions and preliminaries	136
2.3.2	Uniform and self-similar spaces	137
2.3.3	Pointwise multipliers	140
2.3.4	Comments and complements	144

3 Wavelets

3.1	Wavelet isomorphisms and wavelet bases	147
3.1.1	Definitions	147
3.1.2	Some preparations	149
3.1.3	The main assertion	153
3.1.4	Two applications	157
3.1.5	Further wavelet isomorphisms	159
3.2	Wavelet frames	161
3.2.1	Preliminaries and definitions	161
3.2.2	Subatomic decompositions	164
3.2.3	Wavelet frames for distributions	170
3.2.4	Wavelet frames for functions	174
3.2.5	Local smoothness theory	180
3.3	Complements	186
3.3.1	Gausslets	186
3.3.2	Positivity	190

4 Spaces on Domains, Wavelets, Sampling Numbers

4.1	Spaces on Lipschitz domains	193
4.1.1	Introduction	193
4.1.2	Definitions	194
4.1.3	Further spaces, some embeddings	195
4.1.4	Intrinsic characterisations	198
4.2	Wavelet para-bases	203
4.2.1	Wavelets in Euclidean n -space, revisited	203
4.2.2	Scaling properties	205
4.2.3	Refined localisation	207
4.2.4	Wavelets in domains: positive smoothness	209
4.2.5	Wavelets in domains: general smoothness	214
4.3	Sampling numbers	218
4.3.1	Definitions	218
4.3.2	Basic properties	220
4.3.3	Main assertions	222
4.4	Complements	228
4.4.1	Relations to other numbers	228
4.4.2	Embedding constants	231

5 Anisotropic Function Spaces

5.1	Definitions and basic properties	235
5.1.1	Introduction	235
5.1.2	Definitions	237
5.1.3	Concrete spaces	239
5.1.4	New developments	243
5.1.5	Atoms	244
5.1.6	Local means	247

5.1.7	A comment on dual pairings	248
5.2	Wavelets	249
5.2.1	Anisotropic multiresolution analysis	249
5.2.2	Main assertions	252
5.3	The transference method	256
5.3.1	The method	256
5.3.2	Embeddings	258
5.3.3	Entropy numbers	258
5.3.4	Besov characteristics	260
6	Weighted Function Spaces	
6.1	Definitions and basic properties	263
6.1.1	Introduction	263
6.1.2	Definitions	263
6.1.3	Basic properties	265
6.1.4	Special cases	267
6.2	Wavelets	268
6.3	A digression: Sequence spaces	273
6.3.1	Basic spaces	273
6.3.2	Modifications	276
6.4	Entropy numbers	279
6.4.1	The main case	279
6.4.2	The limiting case	284
6.5	Complements	286
6.5.1	The transference method	286
6.5.2	Radial spaces	287
7	Fractal Analysis	
7.1	Measures	297
7.1.1	Definitions, basic properties	297
7.1.2	Potentials and Fourier transforms	300
7.1.3	Traces: general measures	303
7.1.4	Traces: isotropic measures	307
7.2	Characteristics	313
7.2.1	Characteristics of measures	313
7.2.2	A digression: Adapted local means	319
7.2.3	Characteristics of distributions	322
7.3	Operators	332
7.3.1	Potentials and the regularity of measures	332
7.3.2	Elliptic operators: general measures	339
7.3.3	Elliptic operators: isotropic measures	342
7.3.4	Weyl measures	344

8 Function Spaces on Quasi-metric Spaces

8.1	Spaces on d -sets	345
8.1.1	Introduction	345
8.1.2	Quarkonial characterisations	346
8.1.3	Atomic characterisations	350
8.2	Quasi-metric spaces	357
8.2.1	d -spaces	357
8.2.2	Snowflaked transforms	359
8.3	Spaces on d -spaces	363
8.3.1	Frames	363
8.3.2	Spaces of positive smoothness	365
8.3.3	Spaces of arbitrary smoothness	367
8.3.4	Spaces of restricted smoothness	368
8.4	Applications	371
8.4.1	Entropy numbers	371
8.4.2	Riesz potentials	372
8.4.3	Anisotropic spaces	374

9 Function Spaces on Sets

9.1	Introduction and reproducing formula	377
9.1.1	Introduction	377
9.1.2	Reproducing formula	377
9.2	Spaces on Euclidean n -space	381
9.2.1	Definitions and basic assertions	381
9.2.2	Properties	386
9.3	Spaces on sets	390
9.3.1	Preliminaries and sequence spaces	390
9.3.2	Function spaces	394
