Preface	V
1 Boundary Integral Equations	1
1.1 Laplace Equation	2
1.1.1 Interior Dirichlet Boundary Value Problem	10
1.1.2 Interior Neumann Boundary Value Problem	13
1.1.3 Mixed Boundary Value Problem	17
1.1.4 Robin Boundary Value Problem	19
1.1.5 Exterior Dirichlet Boundary Value Problem	21
1.1.6 Exterior Neumann Boundary Value Problem	22
1.1.7 Poisson Problem	24
1.1.8 Interface Problem	26
1.2 Lamé Equations	27
1.2.1 Dirichlet Boundary Value Problem	35
1.2.2 Neumann Boundary Value Problem	36
1.2.3 Mixed Boundary Value Problem	37
1.3 Stokes System	40
1.4 Helmholtz Equation	44
1.4.1 Interior Dirichlet Boundary Value Problem	49
1.4.2 Interior Neumann Boundary Value Problem	50
1.4.3 Exterior Dirichlet Boundary Value Problem	52
1.4.4 Exterior Neumann Boundary Value Problem	54
1.5 Bibliographic Remarks	56
2 Boundary Element Methods	59
2.1 Boundary Elements	59
2.2 Basis Functions	61
2.3 Laplace Equation	65
2.3.1 Interior Dirichlet Boundary Value Problem	65
2.3.2 Interior Neumann Boundary Value Problem	72
2.3.3 Mixed Boundary Value Problem	77

2.3.4	Interface Problem	84
2.4	Lame Equations	87
2.5	Helmholtz Equation	91
2.5.1	Interior Dirichlet Problem	91
2.5.2	Interior Neumann Problem	93
2.5.3	Exterior Dirichlet Problem	97
2.5.4	Exterior Neumann Problem	98
2.6	Bibliographic Remarks	99
3	Approximation of Boundary Element Matrices	101
3.1	Hierarchical Matrices	101
3.1.1	Motivation	101
3.1.2	Hierarchical clustering	108
3.2	Block Approximation Methods	112
3.2.1	Analytic Form of Adaptive Cross Approximation	112
3.2.2	Algebraic Form of Adaptive Cross Approximation	119
3.3	Bibliographic Remarks	129
4	Implementation and Numerical Examples	131
4.1	Geometry Description	131
4.1.1	Unit Sphere	131
4.1.2	TEAM Problem 10	131
4.1.3	TEAM Problem 24	134
4.1.4	Relay	134
4.1.5	Exhaust manifold	135
4.2	Laplace Equation	135
4.2.1	Analytical solutions	135
4.2.2	Discretisation, Approximation and Iterative Solution	137
4.2.3	Generation of Matrices	139
4.2.4	Interior Dirichlet Problem	143
4.2.5	Interior Neumann Problem	149
4.2.6	Interior Mixed Problem	155
4.2.7	Inhomogeneous Interface Problem	160
4.3	Linear Elastostatics	162
4.3.1	Generation of Matrices	162
4.3.2	Relay	163
4.3.3	Foam	166
4.4	Helmholtz Equation	168
4.4.1	Analytical Solutions	169
4.4.2	Discretisation, Approximation and Iterative Solution	169
4.4.3	Generation of Matrices	170
4.4.4	Interior Dirichlet Problem	171
4.4.5	Interior Neumann Problem	185
4.4.6	Exterior Dirichlet Problem	191
4.4.7	Exterior Neumann Problem	196

A	Mathematical Foundations	199
A.1	Function Spaces	199
A.2	Fundamental Solutions	208
A.2.1	Laplace Equation	208
A.2.2	Lame System	209
A.2.3	Stokes System	210
A.2.4	Helmholtz Equation	212
A.3	Mapping Properties	213
B	Numerical Analysis	225
B.1	Variational Methods	225
B.2	Approximation Properties	231
C	Numerical Algorithms	239
C.1	Numerical Integration	239
C.2	Analytic Integration	244
C.2.1	Single Layer Potential for the Laplace operator	246
C.2.2	Double Layer Potential for the Laplace operator	249
C.2.3	Linear Elasticity Single Layer Potential	252
C.3	Iterative Solution Methods	256
C.3.1	Conjugate Gradient Method (CG)	256
C.3.2	Generalised Minimal Residual Method (GMRES)	263
	References	269
	Index	277

The Fast Solution of Boundary Integral Equations

Rjasanow, S.; Steinbach, O.

2007, XII, 284 p. 97 illus., Hardcover

ISBN: 978-0-387-34041-8
