Preface	VII
1 Linear Mixed Models: Part I	1
1.1 Introduction	1
1.1.1 Effect of Air Pollution Episodes on Children	2
1.1.2 Prediction of Maize Single-Cross Performance	3
1.1.3 Small Area Estimation of Income	3
1.2 Types of Linear Mixed Models	4
1.2.1 Gaussian Mixed Models	4
1.2.2 Non-Gaussian Linear Mixed Models	8
1.3 Estimation in Gaussian Models	9
1.3.1 Maximum Likelihood	9
1.3.2 Restricted Maximum Likelihood	12
1.4 Estimation in Non-Gaussian Models	15
1.4.1 Quasi-Likelihood Method	16
1.4.2 Partially Observed Information	18
1.4.3 Iterative Weighted Least Squares	20
1.4.4 Jackknife Method	24
1.5 Other Methods of Estimation	25
1.5.1 Analysis of Variance Estimation	25
1.5.2 Minimum Norm Quadratic Unbiased Estimation	28
1.6 Notes on Computation and Software	29
1.6.1 Notes on Computation	29
1.6.2 Notes on Software	33
1.7 Real-Life Data Examples	34
1.7.1 Analysis of Birth Weights of Lambs	35
1.7.2 Analysis of Hip Replacements Data	37
1.8 Further Results and Technical Notes	39
1.9 Exercises	48

2	Linear Mixed Models: Part II	51
2.1	Tests in Linear Mixed Models	51
2.1.1	Tests in Gaussian Mixed Models	51
2.1.2	Tests in Non-Gaussian Linear Mixed Models	56
2.2	Confidence Intervals in Linear Mixed Models	66
2.2.1	Confidence Intervals in Gaussian Mixed Models	66
2.2.2	Confidence Intervals in Non-Gaussian Linear Mixed Models	72
2.3	Prediction	74
2.3.1	Prediction of Mixed Effect	74
2.3.2	Prediction of Future Observation	80
2.4	Model Checking and Selection	88
2.4.1	Model Diagnostics	88
2.4.2	Model Selection	93
2.5	Bayesian Inference	99
2.5.1	Inference about Variance Components	100
2.5.2	Inference about Fixed and Random Effects	101
2.6	Real-Life Data Examples	102
2.6.1	Analysis of the Birth Weights of Lambs (Continued)	102
2.6.2	The Baseball Example	103
2.7	Further Results and Technical Notes	105
2.8	Exercises	113
3	Generalized Linear Mixed Models: Part I	119
3.1	Introduction	119
3.2	Generalized Linear Mixed Models	120
3.3	Real-Life Data Examples	122
3.3.1	The Salamander Mating Experiments	122
3.3.2	A Log-Linear Mixed Model for Seizure Counts	124
3.3.3	Small Area Estimation of Mammography Rates	124
3.4	Likelihood Function under GLMM	125
3.5	Approximate Inference	127
3.5.1	Laplace Approximation	127
3.5.2	Penalized Quasi-Likelihood Estimation	128
3.5.3	Tests of Zero Variance Components	132
3.5.4	Maximum Hierarchical Likelihood	134
3.6	Prediction of Random Effects	136
3.6.1	Joint Estimation of Fixed and Random Effects	136
3.6.2	Empirical Best Prediction	142
3.6.3	A Simulated Example	149
3.7	Further Results and Technical Notes	151
3.7.1	More on NLGSA	151
3.7.2	Asymptotic Properties of PQWLS Estimators	152
3.7.3	MSE of EBP	155
3.7.4	MSPE of the Model-Assisted EBP	158

3.8	Exercises	161
4	Generalized Linear Mixed Models: Part II	163
4.1	Likelihood-Based Inference	163
4.1.1	A Monte Carlo EM Algorithm for Binary Data	164
4.1.2	Extensions	167
4.1.3	MCEM with I.I.D. Sampling	170
4.1.4	Automation	171
4.1.5	Maximization by Parts	174
4.1.6	Bayesian Inference	178
4.2	Estimating Equations	183
4.2.1	Generalized Estimating Equations (GEE)	184
4.2.2	Iterative Estimating Equations	186
4.2.3	Method of Simulated Moments	190
4.2.4	Robust Estimation in GLMM	196
4.3	GLMM Selection	199
4.3.1	A General Principle for Model Selection	200
4.3.2	A Simulated Example	203
4.4	Real-Life Data Examples	205
4.4.1	Fetal Mortality in Mouse Litters	205
4.4.2	Analysis of Gc Genotype Data: An Application of the Fence Method	207
4.4.3	The Salamander-Mating Experiments: Various Applications of GLMM	209
4.5	Further Results and Technical Notes	214
4.5.1	Proof of Theorem 4.3	214
4.5.2	Linear Convergence and Asymptotic Properties of IEE	214
4.5.3	Incorporating Informative Missing Data in IEE	217
4.5.4	Consistency of MSM Estimator	218
4.5.5	Asymptotic Properties of First and Second-Step Estimators	221
4.5.6	Further Results of the Fence Method	225
4.6	Exercises	229
	230
A	List of Notations	231
B	Matrix Algebra	233
B.1	Kronecker Products	233
B.2	Matrix Differentiation	233
B.3	Projection	234
B.4	Generalized Inverse	235
B.5	Decompositions of Matrices	235
B.6	The Eigenvalue Perturbation Theory	236

C	Some Results in Statistics	237
C.1	Multivariate Normal Distribution	237
C.2	Quadratic Forms	237
C.3	O_P and o_P	238
C.4	Convolution	238
C.5	Exponential Family and Generalized Linear Models	239
	References	241
	Index	255

Linear and Generalized Linear Mixed Models and Their
Applications

Jiang, J.

2007, XIV, 257 p., Hardcover

ISBN: 978-0-387-47941-5
