
Contents

1	LINEAR SYSTEMS OF EQUATIONS	1
1.1	Some Examples	1
1.2	Notation and a Review of Numbers	9
1.3	Gaussian Elimination: Basic Ideas	21
1.4	Gaussian Elimination: General Procedure	33
1.5	*Computational Notes and Projects	46
2	MATRIX ALGEBRA	55
2.1	Matrix Addition and Scalar Multiplication	55
2.2	Matrix Multiplication	62
2.3	Applications of Matrix Arithmetic	71
2.4	Special Matrices and Transposes	86
2.5	Matrix Inverses	101
2.6	Basic Properties of Determinants	114
2.7	*Computational Notes and Projects	129
3	VECTOR SPACES	145
3.1	Definitions and Basic Concepts	145
3.2	Subspaces	161
3.3	Linear Combinations	170
3.4	Subspaces Associated with Matrices and Operators	183
3.5	Bases and Dimension	191
3.6	Linear Systems Revisited	198
3.7	*Computational Notes and Projects	208
4	GEOMETRICAL ASPECTS OF STANDARD SPACES	211
4.1	Standard Norm and Inner Product	211
4.2	Applications of Norms and Inner Products	221
4.3	Orthogonal and Unitary Matrices	233
4.4	*Change of Basis and Linear Operators	242
4.5	*Computational Notes and Projects	247

5	THE EIGENVALUE PROBLEM	251
5.1	Definitions and Basic Properties	251
5.2	Similarity and Diagonalization	263
5.3	Applications to Discrete Dynamical Systems	272
5.4	Orthogonal Diagonalization	282
5.5	*Schur Form and Applications	287
5.6	*The Singular Value Decomposition	291
5.7	*Computational Notes and Projects	294
6	GEOMETRICAL ASPECTS OF ABSTRACT SPACES ...	305
6.1	Normed Spaces	305
6.2	Inner Product Spaces	312
6.3	Gram–Schmidt Algorithm	323
6.4	Linear Systems Revisited	333
6.5	*Operator Norms	342
6.6	*Computational Notes and Projects	348
	Table of Symbols	355
	Solutions to Selected Exercises	357
	References	375
	Index	377

Applied Linear Algebra and Matrix Analysis

Shores, Th.S.

2007, XII, 384 p. 27 illus., Hardcover

ISBN: 978-0-387-33194-2
