Preface	vii
Acknowledgments	xi
About the Author	xxiii
 Chapter 1: Atherosclerosis I	1
1. Introduction	1
2. Geographic Variations	3
3. Natural History	4
4. Other Findings	5
5. The Pathogenesis of Atherosclerosis	6
5.1. The Fatty Streak	7
5.2. The Response-to-Injury Hypothesis of Atherosclerosis	7
5.3. Cellular Interactions in Atherosclerosis	8
5.4. When Does Atherosclerosis Begin	10
6. Risk Factors	11
6.1. High Serum Cholesterol and Low-Density Lipoprotein as a Risk Factor for CHD	11
6.2. Blood Pressure as a Major Cardiovascular Risk Factor	12
6.3. Cigarette Smoke Constituents and SMC Proliferation	13
6.4. Diabetes and Atherosclerosis	13
6.5. Obesity and Atherosclerosis	14
6.6. Effect of β -Blockade in Atherosclerosis	14
7. New Concepts	15
7.1. Parameters We Cannot Measure	15
7.2. Seeing Is Believing	16
7.3. Hemodynamics	16
7.4. Which Cell	17
7.5. Plaque Rupture, Atherosclerosis, Aneurysm	18
References	18

Chapter 2: Atherosclerosis II	20
1. Anatomical Distribution of Atherosclerosis	20
1.1. Atherosclerosis and Functions of the Artery	22
1.2. Stress-Concentration at the Arterial Branch Origins	22
2. Atherosclerosis and Stress-Concentration	24
2.1. Ostial Lesions and Stress-Concentration	24
2.2. Aortic Arch Lesions and Stress/Strain Concentration	25
2.3. Aortic Bifurcation Lesions and Stress	25
2.4. Carotid Bifurcation Lesions and Stress	27
2.5. The Descending Thoracic Aorta Lesions and Flexion Stress	29
2.6. Effect of Blood Pressure and Lesions in the Lower Extremities	30
3. Atherosclerosis in the Aortic Valve and Stress	31
3.1. Methodology	31
3.2. Findings	32
3.3. Stress Determination	35
3.4. Correlation with Stress	35
4. How Stress and Stretch Might Influence Atherosclerosis	36
5. Existing Concepts of Pathogenesis of Atherosclerosis	36
5.1. Response-to-Injury Hypothesis	37
6. A New Hypothesis for Pathogenesis of Atherosclerosis: Smooth Muscle Cell Injury Hypothesis	37
6.1. Essential Features	38
6.2. Cellular Mechanism of Atherosclerosis	38
7. Pathogenesis of Atherosclerosis and Aneurysm	39
7.1. Proposed Pathogenesis of Atherosclerosis and Aneurysm	40
7.2. Examples	41
References	41

Chapter 3: Structure and Mechanics of the Artery 45

Michel R. Labrosse

1. Introduction	45
2. Composition of Arteries	47
3. Different Types of Arteries	48
4. Structure of Arteries	49
5. Macro- and Microstructural Changes Associated with Arterial Branches and Bifurcations	50
6. Function of Arteries	55
6.1. Baroreceptors	55
6.2. Effect of Posture	55
6.3. Adaptation to Pressure and Flow	56
7. Anchoring of Arteries, Residual Stress, and Smooth Muscle Activity	57
8. Changes Along the Arterial Tree	58
9. Aging	60
10. In Vivo Evaluation of the Mechanical Response of Arteries	61

11. In Vitro Evaluation of the Mechanical Response of Arteries	63
11.1. Uniaxial Tests	63
11.2. Biaxial Tests	64
11.3. Pressurization Tests	64
12. Mechanical Model	65
13. Determination of the Material Constants Associated with a Model	68
14. Finite Element Modeling of Arteries	69
15. Preliminary Study of Porcine Ascending Thoracic and Abdominal Aortas	71
16. Conclusion	76
References	76
Appendix	78
 Chapter 4: Pressure Vessel Principles	82
1. Equilibrium in the Artery Under Internal Pressure	83
1.1. Determination of Wall Stress in the Artery: The Basic Approach	83
1.2. Wall Stress in Different-Size Arteries	85
1.3. Magnitude of Wall Stress	86
1.4. Wall Stress in the Aortic Arch and Tortuous Arteries	86
1.5. Stress Distribution from Inside to Outside of the Artery Wall	87
2. Other Factors Affecting Wall Stress in the Artery	89
2.1. Tethering	89
2.2. Active versus Passive Conditions of the Artery	90
2.3. Residual Stress in the Circumferential Direction of the Artery	92
3. Circular Hole in a Plate Under Tension	93
3.1. Stress-Concentration Around a Circular Hole in a Plate Under Tension	94
3.2. Lüder Lines	95
4. Stress-Concentration: Why Does It Occur?	96
4.1. Hole in a Plate	97
4.2. Geometric Discontinuity Stresses	98
4.3. Material Discontinuity Stresses or Stresses in a Bimetallic Joint: Stresses When the Material Changes While the Geometry Remains the Same	99
5. Hole in a Cylinder Under Internal Pressure	99
5.1. Elliptical Opening in a Plate	101
5.2. Elliptical Opening in a Cylinder	102
6. Techniques for Determination of Stress-Concentration	104
6.1. Strain Measurement	104
6.2. Photoelastic Method	104
6.3. Moiré Method	105
References	106

Chapter 5: Pressure Vessel Intersections 107

1. Stress-Concentration at “T”-Branch Pipe Connection:	
The Area Method	108
1.1. Sample Calculation Using Area Method: An Example	111
2. Stress-Concentration of a Nozzle in a Spherical Vessel	112
2.1. Area Method	112
2.2. Example	113
2.3. Influence Length	114
2.4. Effect of Bending (Stress-Concentration Correction Factor K_b)	115
2.5. Comparison with Shell Theory	115
3. An Elastic Shell Analysis of Stress-Concentration of a Pressurized	
“T”-Branch Pipe Connection	116
3.1. Structural Analysis of “T”-Branch Shell Intersection	118
4. Photoelastic Study of Stresses Around Reinforced Outlets in	
Pressure Vessels	119
4.1. Photoelastic Method	119
5. Nonradial Branch (Branch at an Angle)	122
6. Reinforcement Around the Branch	124
7. Fatigue at the Location of Stress-Concentration	126
8. Effect of Size of the Artery and Size of the Branch on	
Stress-Concentration	126
8.1. The Effect of Size of the Artery	127
8.2. The Effect of Size of the Branch (Hole)	128
8.3. Analytical Approach	128
9. Arterial Bifurcation	131
9.1. Discontinuity Stresses (Area Method)	132
9.2. Elliptical Cross Section at the Bifurcation	133
9.3. Bending in the Elliptical Cross Section	133
9.4. Stress Increase Due to Thickness Change	134
10. Curved Arteries	135
References	138

Chapter 6: Stress-Concentration in the Artery I 139

1. Introduction	139
2. Stress-Concentration in the Bovine Coronary Arterial Branch	140
2.1. The Experiments	140
2.2. The Model	144
2.3. The Observations	145
3. Stress-Concentration in the Human Carotid Artery Bifurcation	148
3.1. The Geometry	149
3.2. The Analysis	151
4. Role of Residual Stress in Stress-Concentration at the Human	
Carotid Artery Bifurcation	154
4.1. Residual Strain	154
4.2. The Analytical Model	155
4.3. The Model Results	157

5. Stress at the Arterial Bifurcation Due to Vasoconstriction	160
5.1. Introduction	160
5.2. Determination of Stress Due to Vasoconstriction	160
References	165

Chapter 7: Stress-Concentration in the Artery II 166

1. Introduction	167
2. Shape Change at the Apex of Human Cerebral Artery Bifurcation Under Pressure	167
2.1. Study of the Apex of Cerebral Artery Bifurcation	167
2.2. Stress Considerations	170
3. Stress-Concentration at the Arterial Branch in Vivo	171
3.1. In Vivo Experiments	171
3.2. In Vitro Experiments	172
3.3. Geometry of the Branch	173
3.4. Theoretical Considerations	174
3.5. The Finite Element Model	176
3.6. Parametric Studies	177
3.7. Analytical Results	177
3.8. Comments	182
4. Determination of Absolute Values of Stress and Stress-Concentration at the Arterial Branch	182
4.1. Introduction	182
4.2. Steps Used in the Analysis	183
4.3. Experimental Method	183
4.4. Isotropic Nonlinear Material Properties	186
4.5. Multiple Geometric Models	186
4.6. Changing the Modulus of Elasticity	186
4.7. Analytical Results	188
5. Stresses in the Human Aortic Arch: Analysis Using Nonlinear, Hyperelastic, and Isotropic Properties	192
5.1. Introduction	192
5.2. Strains in the Human Aortic Arch	193
5.3. Determination of Stresses in the Human Aortic Arch	196
5.4. Results: Finite Element Model Solution	204
5.5. Verification of the Finite Element Model: Strain Comparison	210
5.6. Conclusions and Comments	211
6. Circumferential Stress in the Artery: Comparing Different Studies	211
References	213

Chapter 8: Endothelial Cells and Low-Density Lipoproteins at the Branch 214

1. Introduction	215
2. Endothelial Cell Morphology at the Branch and Nonbranch Regions	216

xviii Contents

2.1. Straight Segment	218
2.2. Branch Region	219
3. Endothelial Cell Morphology at the Site of High Permeability	220
3.1. Quantitation of Endothelial Injury	224
4. Changes in Endothelial Cell Shape Due to Imposed Coarctation	225
5. Changes in Aortic Permeability Due to Imposed Coarctation	226
6. Endothelial Cell Orientation in the Aortic Valve	229
7. Changes in Endothelial Cell Morphology Due to Cyclic Tensional Deformation (Cell Culture Studies)	232
8. Endothelial Cell Orientation and Mechanical Forces	236
9. Distribution of Low-Density Lipoprotein in the Aorta	237
9.1. Introduction	237
9.2. Distribution of LDL in the Rabbit Thoracic Aorta	237
10. Distribution of LDL in the Branch and Nonbranch Regions of the Aorta	239
11. Replication of Endothelial Cells and Its Preferential Localization	243
11.1. Areas Around the Mouths of Branches	244
11.2. The Effect of Constriction	245
12. Endothelial Cell Replication at the Site of Increased Permeability	246
12.1. Endothelial Cell Labeling	247
13. Endothelial Cell Replication Under Hypertension	248
13.1. Creation of Hypertensive Rats	249
13.2. Effects of Hypertension	249
14. Association Between Endothelial Cell Replication, Arterial Permeability, and Hypertension	249
14.1. Methods for Detecting Dying or Dead Endothelial Cells	251
14.2. Quantification of Immunoglobulin G-Containing Dying or Dead Endothelial Cells	251
14.3. Fluorescence Microscopy	251
References	253

Chapter 9: Smooth Muscle Cells and Stretch 255

1. Introduction	255
2. SMC Proliferation and Hypertension	256
2.1. Changes in Arteries Proximal to Ligature	258
3. Response of SMCs to Cyclic Stretch: A Cell Culture Study	260
3.1. 2D Cell Culture Studies	261
3.2. Cyclic Stretch and 3D Cultured SMCs	263
4. Artery Response to Balloon Injury and Cholesterol Diet: Contribution of SMCs	266
5. SMC Proliferation in Relation to Aortic Stretch	269
5.1. Autoradiography	270
5.2. Luminal Surface Area, Volume, and Weight of the Artery Segments	270
5.3. Change in the Aortic Diameter Due to Balloon Catheters	271
5.4. Effect of the Balloon Size	272

5.5. Effect of Tapering of the Aorta.	273
5.6. Location of the Labeled SMCs.	273
5.7. Aorta and Balloon Diameter.	274
5.8. Balloon Injury and Cell Proliferation	274
5.9. Effect of Tapering of the Aorta.	274
6. Quantitative Relationship Between SMC Proliferation and Aortic Stretch	275
References	279

Chapter 10: Stress Reduction and Atherosclerosis Reduction 281

1. Introduction.	282
2. Inhibition of Atherosclerosis by Reduction of Arterial Wall Stress.	282
2.1. Reduction of Arterial Wall Stress	282
2.2. Rabbit Model for Atherosclerosis.	283
2.3. Atherosclerosis in Control and Stress-reduced Areas	285
3. Rhythmic Pattern of Atherosclerosis in Vertebral Arteries	288
4. Freedom from Atherosclerosis in Intramyocardial Coronary Arteries	290
4.1. The Anatomy	290
4.2. Clinical Investigation	292
4.3. Studies in Canine Hearts	292
4.4. Wall Stress and Coronary Atherosclerosis	295
5. Change in Endothelial Cell Morphology by Reduction of Arterial Wall Stress	296
6. Cumulative Arterial Injury Hypothesis for Atherosclerosis	298
6.1. Wall Stress and Atherosclerosis	299
6.2. Cumulative Arterial Injury (Artery Fatigue) and Atherosclerosis.	300
6.3. Endothelial Injury and Atherosclerosis.	303
6.4. Medical Injury and Atherosclerosis	303
6.5. Comprehensive Mechanism for Atherosclerosis	303
7. Comparing Fatigue Damage Between Nonbiological (Metallic) and Biological Pressure Vessels.	304
7.1. Common Cause of Atherosclerosis and Aneurysm	304
7.2. Stress-Concentration and Fatigue	305
8. Reduction of Coronary Atherosclerosis by Reduction of Heart Rate in Cynomolgus Monkeys.	307
9. Reduction of Atherosclerosis by Treatment with Beta-Blocker in Cynomolgus Monkeys.	308
10. Reduction of Endothelial Cell Injury by Treatment with Beta-Blocker in Cynomolgus Monkeys	310
11. Reduction of Arterial Permeability to LDL by Treatment with Beta-Blocker in Rabbits.	313
11.1. LDL Preparation	313
11.2. Aorta Preparation and the Experiment	313
11.3. Tissue Samples, Cryosectioning, and Counting	314

xx Contents

11.4.	Heart Rate	314
11.5.	Aortic Wall Thickness	314
11.6.	LDL Influx	314
11.7.	Summary and Interpretation	316
References	317

Chapter 11: The Vein Graft 320

1.	Introduction	321
1.1.	Veins from the Lower Leg	321
1.2.	Shape of the Vein versus Vein Graft	321
1.3.	Vein Valves	322
1.4.	Reversed, Nonreversed, and in Situ Grafts	322
2.	Vein Graft Atherosclerosis in Coronary Artery Positions	323
3.	Etiology of Lesions in the Vein Grafts	325
4.	Vein Grafts in Femoro-Popliteal Positions	327
4.1.	Additional Comments	329
5.	Vein Valves and Graft Stenosis	330
5.1.	The Animal Model	331
5.2.	The “Horseshoe” Graft in Patients	332
6.	Vein Valve Motion and Pressure Trap in Vein Grafts	333
6.1.	The Fate of the Vein Valve in the Graft	334
6.2.	Flow Augmentation by the Vein Valve in the Graft	335
6.3.	Valve Motion and Pressure Trap	335
6.4.	Pressure Trap in Patients	341
7.	Valve Motion in Coronary Artery Bypass Graft: Correlation with Flow Waveform	344
7.1.	Valve Dynamics in the Femoro-Popliteal Position	350
8.	Mechanics of Distension of Veins	351
9.	Adaptation of the Vein in the Arterial Position	354
9.1.	Jugular Vein in Carotid Position in Rabbits	354
9.2.	Adaptation of Vein Under Various Pressure and Flow Conditions	357
9.3.	Intimal and Medial Changes in Vein Grafts in Response to Pressure and Flow	358
10.	Adaptation of Vein Grafts Under External Support	359
10.1.	Perivenous Mesh	360
10.2.	A New Outside Stent	362
10.3.	Biodegradation of External Support to Optimize Arterialization of Vein Grafts	364
References	365

Chapter 12: Anastomosis 368

1.	Introduction	368
2.	Increased Compliance Near Artery-to-Artery, End-to-End, Anastomosis	369

3. Influence of Interrupted versus Continuous Suture Technique on Compliance Near an Anastomosis 371
4. Arterial Anastomosis with Vein and Dacron Grafts: Stress Studies . . . 373
- References 378

Chapter 13: Anastomotic Aneurysms and Anastomotic

Intimal Hyperplasia	380
1. Introduction.	380
2. Anastomotic Aneurysms	381
2.1. Clinical Findings	383
2.2. Pathogenesis	384
3. Mechanical Stress at Prosthesis-to-Artery, End-to-Side Anastomosis	386
4. Anastomotic Intimal Hyperplasia.	388
4.1. Vein-to-Artery, End-to-Side Anastomosis.	388
4.2. Effect of Graft Compliance Mismatch on Arterial Intimal Hyperplasia at the Anastomosis	392
4.3. Suture Line Stresses at the Anastomosis: Effect of Compliance Mismatch	396
4.4. A Take-Home Message	402
References	402

Chapter 14: Intracranial Aneurysms 403

1. Introduction.	403
2. The Anatomy	404
3. Incidence.	405
4. Pathology	407
4.1. Aneurysms.	407
4.2. Atherosclerosis	411
4.3. Association Between Aneurysm and Atherosclerosis	413
5. Mechanism of Aneurysm Formation	414
5.1. Pathogenesis of Aneurysms	416
5.2. Mechanisms of Growth and Rupture	418
5.3. Aneurysm Wall Histology	419
6. Elasticity of the Aneurysm	419
7. Mechanical Forces in Aneurysm Formation.	421
7.1. Fluid Dynamics–related Forces	421
7.2. Solid Mechanics–related Forces	423
References	424

Chapter 15: Aortic Aneurysms. 426

1. Introduction	427
2. Incidence of AAA	427
3. Association Between Aneurysm Size and Rupture	429
4. Pathogenesis of Aortic Aneurysm	431

xxii Contents

4.1. Histology/Morphology	431
4.2. Other Contributing Factors	435
5. Expansion Rate of AAA	436
6. Thrombus and AAA	437
7. Location of Rupture in AAA	439
8. Effect of Thrombus on AAA Dilation and Stress	440
8.1. Pressure Transmission Through the Mural Thrombus	441
8.2. AAA Dilation Under Intraluminal Pressure	442
8.3. Mechanical Model of the Thrombus	444
8.4. Clinical Significance of Thrombus in Aneurysm	445
9. Mechanical Properties and Rupture Strength of AAA	446
9.1. Comparing Different Regions	449
9.2. Comparing Different Directions	449
10. Changes in Wall Stress During Growth of the Aneurysm	451
10.1. Material Properties of the Normal Aorta	452
10.2. Geometry of the Aneurysm Model	453
10.3. Finite Element Analysis of the Model	454
10.4. Overall Finding	456
10.5. Justification of the Model	456
10.6. Orientation of Tear	457
11. Wall Stress in AAA	457
11.1. The Approach	458
11.2. Observations	459
11.3. The Implications	465
11.4. Comments	466
References	466
Chapter 16: Aortic Dissection.....	469
1. Morphologic Features	469
2. Incidence	471
3. Predisposing Factors	472
4. Classification, Location, Frequency	472
5. Pathogenesis	473
6. The Role of Aortic Root Motion in the Pathogenesis of Aortic Dissection	474
6.1. Measurement of Aortic Root Motion in Patients	474
6.2. Stress Analysis of the Aortic Root, Aortic Arch, and Supra-aortic Vessels	475
6.3. Significance of Aortic Wall Stress	482
References	483
Index.....	485
