<b>List of Problems</b> . . . . .	<b>xi</b>
<b>List of Examples</b> . . . . .	<b>xv</b>
<b>Preface</b> . . . . .	<b>xvii</b>
<b>Notation</b> . . . . .	<b>xix</b>
 <b>I INTRODUCTION:</b>	
<b>    NEWTONIAN PHYSICS AND SPECIAL RELATIVITY . . . . .</b>	<b>1</b>
<b>1 Relativity Principles and Gravitation . . . . .</b>	<b>3</b>
1.1 Newtonian mechanics . . . . .	3
1.2 Galilei–Newton’s principle of Relativity . . . . .	4
1.3 The principle of Relativity . . . . .	5
1.4 Newton’s law of Gravitation . . . . .	6
1.5 Local form of Newton’s Gravitational law . . . . .	8
1.6 Tidal forces . . . . .	10
1.7 The principle of equivalence . . . . .	14
1.8 The covariance principle . . . . .	15
1.9 Mach’s principle . . . . .	16
Problems . . . . .	17
<b>2 The Special Theory of Relativity . . . . .</b>	<b>21</b>
2.1 Coordinate systems and Minkowski-diagrams . . . . .	21
2.2 Synchronization of clocks . . . . .	23
2.3 The Doppler effect . . . . .	23
2.4 Relativistic time-dilatation . . . . .	25
2.5 The relativity of simultaneity . . . . .	26
2.6 The Lorentz-contraction . . . . .	28
2.7 The Lorentz transformation . . . . .	30
2.8 Lorentz-invariant interval . . . . .	32
2.9 The twin-paradox . . . . .	34
2.10 Hyperbolic motion . . . . .	35
2.11 Energy and mass . . . . .	37
2.12 Relativistic increase of mass . . . . .	38
2.13 Tachyons . . . . .	39
2.14 Magnetism as a relativistic second-order effect . . . . .	40
Problems . . . . .	42

<b>II THE MATHEMATICS OF THE GENERAL THEORY OF RELATIVITY</b>	<b>49</b>
<b>3 Vectors, Tensors, and Forms</b>	<b>51</b>
3.1 Vectors	51
3.2 Four-vectors	52
3.3 One-forms	54
3.4 Tensors	55
3.5 Forms	57
Problems	60
<b>4 Basis Vector Fields and the Metric Tensor</b>	<b>63</b>
4.1 Manifolds and their coordinate-systems	63
4.2 Tangent vector fields and the coordinate basis vector fields	65
4.3 Structure coefficients	71
4.4 General basis transformations	72
4.5 The metric tensor	74
4.6 Orthonormal basis	76
4.7 Spatial geometry	78
4.8 The tetrad field of a comoving coordinate system	80
4.9 The volume form	81
4.10 Dual forms	82
Problems	84
<b>5 Non-inertial Reference Frames</b>	<b>89</b>
5.1 Spatial geometry in rotating reference frames	89
5.2 Ehrenfest's paradox	90
5.3 The Sagnac effect	93
5.4 Gravitational time dilatation	94
5.5 Uniformly accelerated reference frame	95
5.6 Covariant Lagrangian dynamics	98
5.7 A general equation for the Doppler effect	103
Problems	107
<b>6 Differentiation, Connections, and Integration</b>	<b>109</b>
6.1 Exterior Differentiation of forms	109
6.2 Electromagnetism	113
6.3 Integration of forms	115
6.4 Covariant differentiation of vectors	120
6.5 Covariant differentiation of forms and tensors	127
6.6 Exterior differentiation of vectors	129
6.7 Covariant exterior derivative	133
6.8 Geodesic normal coordinates	136
6.9 One-parameter groups of diffeomorphisms	137
6.10 The Lie derivative	140
6.11 Killing vectors and Symmetries	144
Problems	147
<b>7 Curvature</b>	<b>151</b>
7.1 Curves	151
7.2 Surfaces	153

7.3	The Riemann Curvature Tensor . . . . .	155
7.4	Extrinsic and Intrinsic Curvature . . . . .	161
7.5	The equation of geodesic deviation . . . . .	164
7.6	Spaces of constant curvature . . . . .	166
	Problems . . . . .	172

### III EINSTEIN'S FIELD EQUATIONS . . . . . 177

#### 8 Einstein's Field Equations . . . . . 179

8.1	From Newton's law of gravitation to Einstein's field equations . . . . .	179
8.2	Deduction of Einstein's vacuum field equations from Hilbert's variational principle . . . . .	180
8.3	The field equations in the presence of matter and energy . . .	183
8.4	Energy-momentum conservation . . . . .	185
8.5	Some energy-momentum tensors . . . . .	185
8.6	Some particular fluids . . . . .	187
8.7	The paths of free point particles . . . . .	191
	Problems . . . . .	192

#### 9 The Linear Field Approximation . . . . . 195

9.1	The linearised field equations . . . . .	195
9.2	The Newtonian limit of general relativity . . . . .	198
9.3	Solutions of the linearised field equations . . . . .	199
9.4	Gravitoelectromagnetism . . . . .	201
9.5	Gravitational waves . . . . .	203
9.6	Gravitational radiation from sources . . . . .	206
	Problems . . . . .	210

#### 10 The Schwarzschild Solution and Black Holes . . . . . 215

10.1	The Schwarzschild solution for empty space . . . . .	215
10.2	Radial free fall in Schwarzschild spacetime . . . . .	220
10.3	The light-cone in a Schwarzschild spacetime . . . . .	221
10.4	Particle trajectories in Schwarzschild spacetime . . . . .	225
10.5	Analytical extension of the Schwarzschild spacetime . . . . .	230
10.6	Charged and rotating black holes . . . . .	233
10.7	Black Hole thermodynamics . . . . .	245
10.8	The Tolman-Oppenheimer-Volkoff equation . . . . .	252
10.9	The interior Schwarzschild solution . . . . .	253
10.10	Relativistic gravitation versus Newtonian gravitation . . . . .	256
	Problems . . . . .	257

### IV COSMOLOGY . . . . . 265

#### 11 Homogeneous and Isotropic Universe Models . . . . . 267

11.1	The cosmological principles . . . . .	267
11.2	Friedmann-Robertson-Walker models . . . . .	268
11.3	Dynamics of Homogeneous and Isotropic cosmologies . . . . .	271

11.4	Cosmological redshift and the Hubble law . . . . .	273
11.5	Radiation dominated universe models . . . . .	278
11.6	Matter dominated universe models . . . . .	281
11.7	The gravitational lens effect . . . . .	283
11.8	Redshift-luminosity relation . . . . .	289
11.9	Cosmological horizons . . . . .	293
11.10	Big Bang in an infinite Universe . . . . .	294
	Problems . . . . .	296
<b>12</b>	<b>Universe Models with Vacuum Energy . . . . .</b>	<b>305</b>
12.1	Einstein's static universe . . . . .	305
12.2	de Sitter's solution . . . . .	306
12.3	The de Sitter hyperboloid . . . . .	309
12.4	The horizon problem and the flatness problem . . . . .	310
12.5	Inflation . . . . .	312
12.6	The Friedmann-Lemaître model . . . . .	319
12.7	Universe models with quintessence energy . . . . .	325
12.8	Dark energy explored by means of supernova observations and the statefinder diagnostic . . . . .	328
12.9	Cosmic density perturbations . . . . .	334
12.10	Temperature fluctuations in the cosmic microwave background (CMB) . . . . .	338
12.11	Mach's principle . . . . .	345
12.12	The History of our Universe . . . . .	348
	Problems . . . . .	359
<b>13</b>	<b>Anisotropic and Inhomogeneous Universe Models . . . . .</b>	<b>367</b>
13.1	The Bianchi type I universe model . . . . .	367
13.2	The Kasner solutions . . . . .	370
13.3	The energy-momentum conservation law in an anisotropic universe . . . . .	371
13.4	Models with a perfect fluid . . . . .	373
13.5	Inflation through bulk viscosity . . . . .	376
13.6	A universe with a dissipative fluid . . . . .	377
13.7	The Lemaître-Tolman-Bondi universe models . . . . .	379
	Problems . . . . .	383
<b>V</b>	<b>ADVANCED TOPICS . . . . .</b>	<b>387</b>
<b>14</b>	<b>Covariant Decomposition, Singularities, and Canonical Cosmology . . . . .</b>	<b>389</b>
14.1	Covariant decomposition . . . . .	389
14.2	Equations of motion . . . . .	392
14.3	Singularities . . . . .	394
14.4	Lagrangian formulation of General Relativity . . . . .	399
14.5	Hamiltonian formulation . . . . .	402
14.6	Canonical formulation with matter and energy . . . . .	404

14.7	The space of three-metrics: Superspace . . . . .	406
	Problems . . . . .	410
<b>15</b>	<b>Spatially Homogeneous Universe Models . . . . .</b>	<b>413</b>
15.1	Lie groups and Lie algebras . . . . .	413
15.2	Homogeneous spaces . . . . .	416
15.3	The Bianchi models . . . . .	420
15.4	The orthonormal frame approach to the non-tilted Bianchi models . . . . .	423
15.5	The 8 model geometries . . . . .	428
15.6	Constructing compact quotients . . . . .	430
	Problems . . . . .	433
<b>16</b>	<b>Israel's Formalism: The Metric Junction Method . . . . .</b>	<b>439</b>
16.1	The relativistic theory of surface layers . . . . .	439
16.2	Einstein's field equations . . . . .	441
16.3	Surface layers and boundary surfaces . . . . .	443
16.4	Spherical shell of dust in vacuum . . . . .	445
	Problems . . . . .	450
<b>17</b>	<b>Brane-worlds . . . . .</b>	<b>453</b>
17.1	Field equations on the brane . . . . .	453
17.2	Five-dimensional brane cosmology . . . . .	456
17.3	Solutions in the bulk . . . . .	459
17.4	Towards a realistic brane cosmology . . . . .	461
17.5	Inflation in the brane . . . . .	464
17.6	Dynamics of two branes . . . . .	467
17.7	The hierarchy problem and the weakness of gravity . . . . .	469
17.8	The Randall-Sundrum models . . . . .	471
	Problems . . . . .	474
<b>18</b>	<b>Kaluza-Klein Theory . . . . .</b>	<b>479</b>
18.1	A fifth extra dimension . . . . .	479
18.2	The Kaluza-Klein action . . . . .	481
18.3	Implications of a fifth extra dimension . . . . .	485
18.4	Conformal transformations . . . . .	488
18.5	Conformal transformation of the Kaluza-Klein action . . . . .	491
18.6	Kaluza-Klein cosmology . . . . .	494
	Problems . . . . .	497
<b>VI</b>	<b>APPENDICES . . . . .</b>	<b>501</b>
<b>A</b>	<b>Constants of Nature . . . . .</b>	<b>503</b>
<b>B</b>	<b>Penrose Diagrams . . . . .</b>	<b>505</b>
B.1	Conformal transformations and causal structure . . . . .	505
B.2	Schwarzschild spacetime . . . . .	507
B.3	de Sitter spacetime . . . . .	507
<b>C</b>	<b>Anti-de Sitter Spacetime . . . . .</b>	<b>511</b>
C.1	The anti-de Sitter hyperboloid . . . . .	511

---

C.2	Foliations of $\text{AdS}_n$ . . . . .	512
C.3	Geodesics in $\text{AdS}_n$ . . . . .	513
C.4	The BTZ black hole . . . . .	514
C.5	$\text{AdS}_3$ as the group $SL(2, \mathbb{R})$ . . . . .	515
<b>D</b>	<b>How to Read This Book</b> . . . . .	<b>517</b>
<b>E</b>	<b>Suggested Further Reading</b> . . . . .	<b>519</b>
	<b>Bibliography</b> . . . . .	<b>523</b>
	<b>Index</b> . . . . .	<b>533</b>

Einstein's General Theory of Relativity  
With Modern Applications in Cosmology

Grøn, Ø.; Hervik, S.

2007, XX, 538 p., Hardcover

ISBN: 978-0-387-69199-2
