

Contents

Chapter 1. Celestial and Mechanical Clocks	1
1.1 Cyclic Events in Nature	1
1.2 The Calendar	2
1.3 Solar Eclipses as Time Markers	3
1.4 The Tides	5
1.5 The Sidereal Day	6
1.6 The Precession of the Equinoxes	8
1.7 The Sundial	8
1.8 The Astrolabe	10
1.9 Water Clocks	11
1.10 Tower Clocks	14
1.11 The Pendulum Clock	16
1.12 The Spring–Balance–Wheel Clock	18
Chapter 2. Oscillations and Fourier Analysis	23
2.1 Oscillatory Motion in Matter	23
2.2 Simple Harmonic Motion	24
2.3 Forced Oscillations: Resonance	26
2.4 Waves in Extended Media	28
2.5 Wave Dispersion	31
2.6 Linear and Nonlinear Media	32
2.7 Normal Modes of Vibration	33
2.8 Parametric Excitations	36
2.9 Fourier Analysis	37
2.10 Coupled Oscillations	41
Chapter 3. Oscillators	45
3.1 Feedback in Amplifiers	45
3.2 Conditions for Oscillation	48

viii Contents

3.3	Resonators	49
3.4	The Klystron Microwave Tube	52
3.5	Oscillators at Optical Frequency	53
3.6	Stability of Oscillators	56
Chapter 4. Quartz Clocks		63
4.1	Historical Antecedents	63
4.2	Properties and Structure of Crystalline Quartz	66
4.3	Modes of Vibration of a Quartz Plate	70
4.4	X-Ray Crystallography	72
4.5	Fabrication of Quartz Resonators	74
4.6	Stability of Resonance Frequency	74
4.7	The Quartz Resonator as a Circuit Element	78
4.8	Frequency/Time Measurement	80
Chapter 5. The Language of Electrons, Atoms, and Quanta		87
5.1	Classical Lorentz Theory	87
5.2	Spectrum of Blackbody Radiation	88
5.3	The Quantum of Radiation: The Photon	89
5.4	Bohr's Theory of the Hydrogen Atom	90
5.5	The Schrödinger Wave Equation	92
5.6	Quantum Numbers of Atomic States	94
5.7	The Vector Model	95
5.8	The Shell Structure of Electron States	96
5.9	The Pauli Exclusion Principle	99
5.10	Spectroscopic Notation	100
5.11	The Hyperfine Interaction	101
5.12	Electrons in Solids: The Band Theory	106
Chapter 6. Magnetic Resonance		113
6.1	Introduction	113
6.2	Atomic Magnetism	113
6.3	The Zeeman Effect	114
6.4	Gyroscopic Motion in a Magnetic Field	117
6.5	Inducing Transitions	119
6.6	Motion of Global Moment: The Bloch Theory	122
6.7	Production of Global Polarization	124
Chapter 7. Corrections to Observed Atomic Resonance		133
7.1	Resonance Frequency Broadening	134
7.2	Thermal Doppler Broadening	136
7.3	Relativistic Effects	142
7.4	Conclusion	148

Chapter 8. The Rubidium Clock 149

8.1	The Reference Hyperfine Transition	149
8.2	The Breit–Rabi Formula	150
8.3	Optical Pumping of Hyperfine Populations	152
8.4	Optical Hyperfine Pumping: Use of an Isotopic Filter	154
8.5	The Use of Buffer Gases	157
8.6	Light Shifts in the Reference Frequency	159
8.7	Rubidium Frequency Control of Quartz Oscillator	160
8.8	Frequency Stability of the Rubidium Standard	163
8.9	The Miniaturization of Atomic Clocks	165

Chapter 9. The Classical Cesium Standard 167

9.1	Definition of the Unit of Time	167
9.2	Implementation of the Definition: The Cesium Standard	167
9.3	The Physical Design	171
9.4	Detection of Transitions	183
9.5	Frequency-Lock of Flywheel Oscillator to Cesium	184
9.6	Corrections to the Observed Cs Frequency	187

Chapter 10. Atomic and Molecular Oscillators: Masers 191

10.1	The Ammonia Maser	191
10.2	Basic Elements of a Beam Maser	192
10.3	Inversion Spectrum in NH_3	193
10.4	The Electrostatic State Selector	196
10.5	Stimulated Radiation in the Cavity	200
10.6	Threshold for Sustained Oscillation	201
10.7	Sources of Frequency Instability	202
10.8	The Rubidium Maser	206

Chapter 11. The Hydrogen Maser 209

11.1	Introduction	209
11.2	The Hyperfine Structure of H Ground State	211
11.3	Principles of the Hydrogen Maser	214
11.4	Physical Design of the H-Maser	220
11.5	Automatic Cavity Tuning	229
11.6	The Wall Shift in Frequency	230
11.7	The H-Maser Signal Handling	232

Chapter 12. The Confinement of Particles in Fields 237

12.1	Introduction	237
12.2	The Penning Trap	238
12.3	The Paul High-Frequency Trap	243
12.4	Field Distortion due to Ions	257

x Contents

12.5	The Effect of Collisions	258
12.6	Ion Observation	259
12.7	Laser Resonance Fluorescence Detection	262
Chapter 13. Isolated Ion Clock: A New Approach		263
13.1	The Original Concept	263
13.2	Hyperfine Resonance in Trapped $^{199}\text{Hg}^+$ Ions	264
13.3	A Portable Hg^{199} Ion Microwave Standard	276
Chapter 14. Optical Frequency Oscillators: Lasers		283
14.1	Fundamentals	283
14.2	Laser Beam Properties	298
14.3	Laser Optical Elements	302
Chapter 15. Laser Systems		311
15.1	The Gas Lasers	311
15.2	Liquid Dye Lasers	316
15.3	Semiconductor Lasers	323
15.4	Solid Crystalline Lasers	327
Chapter 16. Laser Cooling of Atoms and Ions		337
16.1	Introduction	337
16.2	Light Pressure	338
16.3	Scattering of Light from Small Particles	340
16.4	Scattering of Light by Atoms	341
16.5	Optical Field Gradient Force	344
16.6	Doppler Cooling	344
16.7	Theoretical Limit	347
16.8	Optical “Molasses” and the Magneto-Optical Trap	348
16.9	Polarization Gradient Cooling: The Sisyphus Effect	352
16.10	Laser Cooling of Trapped Ions	357
Chapter 17. Application of Lasers to Microwave Standards		363
17.1	Observation of Individual Ions	363
17.2	Optical Detection of Hyperfine Transitions	367
17.3	The NIST Mercury Ion Microwave Standard	373
17.4	The Proposed Ytterbium Ion Standard	376
17.5	The Laser Pumped Cesium Beam Standard	377
17.6	The Cesium Fountain Standard	381

Chapter 18. Optical Standards and Measurement 387

18.1	Introduction	387
18.2	Definition of the Meter in Terms of the Second	388
18.3	Secondary Optical Frequency Standards	389
18.4	Optical Standards Based on Laser Cooled Ions	396
18.5	Optical Frequency Chains	405
18.6	Optical Frequency Comb Generators	410

Chapter 19. Applications: Time-Based Navigation 417

19.1	Introduction	417
19.2	“Deep” Space Probes	417
19.3	Very Long Baseline Interferometry	418
19.4	The Motion of the Earth	419
19.5	Radio Navigation	420
19.6	Navigation by Satellite	426
19.7	The Global Positioning System (GPS)	428

Chapter 20. Atomic Clocks and Fundamental Physics 445

20.1	Introduction	445
20.2	Einstein’s Equivalence Principle (EEP)	447
20.3	Lorentz Symmetry	448
20.4	Symmetry in Fundamental Physics	449
20.5	The CPT Symmetry	452
20.6	The String Theory	455
20.7	Experiments on ISS (International Space Station)	456
20.8	Conclusion	459
