
Contents

1	Introduction	1
1.1	Basic Statistical Learning Problems	2
1.2	Categorizations of Machine Learning Techniques	4
1.2.1	Unsupervised vs. Supervised	4
1.2.2	Generative Models vs. Discriminative Models	4
1.2.3	Models for Simple Data vs. Models for Complex Data	6
1.2.4	Model Identification vs. Model Prediction	7
1.3	Multimedia Content Analysis	8

Part I Unsupervised Learning

2	Dimension Reduction	15
2.1	Objectives	15
2.2	Singular Value Decomposition	16
2.3	Independent Component Analysis	20
2.3.1	Preprocessing	23
2.3.2	Why Gaussian is Forbidden	24
2.4	Dimension Reduction by Locally Linear Embedding	26
2.5	Case Study	30
	Problems	34
3	Data Clustering Techniques	37
3.1	Introduction	37
3.2	Spectral Clustering	39
3.2.1	Problem Formulation and Criterion Functions	39
3.2.2	Solution Computation	42

XII Contents

3.2.3	Example	46
3.2.4	Discussions	50
3.3	Data Clustering by Non-Negative Matrix Factorization	51
3.3.1	Single Linear NMF Model	52
3.3.2	Bilinear NMF Model	55
3.4	Spectral vs. NMF	59
3.5	Case Study: Document Clustering Using Spectral and NMF	
	Clustering Techniques	61
3.5.1	Document Clustering Basics	62
3.5.2	Document Corpora	64
3.5.3	Evaluation Metrics	64
3.5.4	Performance Evaluations and Comparisons	65
	Problems	68

Part II Generative Graphical Models

4	Introduction of Graphical Models	73
4.1	Directed Graphical Model	74
4.2	Undirected Graphical Model	77
4.3	Generative vs. Discriminative	79
4.4	Content of Part II	80
5	Markov Chains and Monte Carlo Simulation	81
5.1	Discrete-Time Markov Chain	81
5.2	Canonical Representation	84
5.3	Definitions and Terminologies	88
5.4	Stationary Distribution	91
5.5	Long Run Behavior and Convergence Rate	94
5.6	Markov Chain Monte Carlo Simulation	100
5.6.1	Objectives and Applications	100
5.6.2	Rejection Sampling	101
5.6.3	Markov Chain Monte Carlo	104
5.6.4	Rejection Sampling vs. MCMC	110
	Problems	112
6	Markov Random Fields and Gibbs Sampling	115
6.1	Markov Random Fields	115
6.2	Gibbs Distributions	117

6.3	Gibbs – Markov Equivalence	120
6.4	Gibbs Sampling	123
6.5	Simulated Annealing	126
6.6	Case Study: Video Foreground Object Segmentation by MRF	133
6.6.1	Objective	134
6.6.2	Related Works	134
6.6.3	Method Outline	135
6.6.4	Overview of Sparse Motion Layer Computation	136
6.6.5	Dense Motion Layer Computation Using MRF	138
6.6.6	Bayesian Inference	140
6.6.7	Solution Computation by Gibbs Sampling	141
6.6.8	Experimental Results	143
	Problems	146
7	Hidden Markov Models	149
7.1	Markov Chains vs. Hidden Markov Models	149
7.2	Three Basic Problems for HMMs	153
7.3	Solution to Likelihood Computation	154
7.4	Solution to Finding Likeliest State Sequence	158
7.5	Solution to HMM Training	160
7.6	Expectation-Maximization Algorithm and its Variances	162
7.6.1	Expectation-Maximization Algorithm	162
7.6.2	Baum-Welch Algorithm	164
7.7	Case Study: Baseball Highlight Detection Using HMMs	167
7.7.1	Objective	167
7.7.2	Overview	167
7.7.3	Camera Shot Classification	169
7.7.4	Feature Extraction	172
7.7.5	Highlight Detection	173
7.7.6	Experimental Evaluation	174
	Problems	175
8	Inference and Learning for General Graphical Models	179
8.1	Introduction	179
8.2	Sum-product algorithm	182
8.3	Max-product algorithm	188

8.4	Approximate inference	189
8.5	Learning	191
	Problems	196

Part III Discriminative Graphical Models

9	Maximum Entropy Model and Conditional Random Field	201
9.1	Overview of Maximum Entropy Model	202
9.2	Maximum Entropy Framework	204
9.2.1	Feature Function	204
9.2.2	Maximum Entropy Model Construction	205
9.2.3	Parameter Computation.....	208
9.3	Comparison to Generative Models	210
9.4	Relation to Conditional Random Field	213
9.5	Feature Selection	215
9.6	Case Study: Baseball Highlight Detection Using Maximum Entropy Model	217
9.6.1	System Overview	218
9.6.2	Highlight Detection Based on Maximum Entropy Model	220
9.6.3	Multimedia Feature Extraction.....	222
9.6.4	Multimedia Feature Vector Construction	226
9.6.5	Experiments	227
	Problems	232
10	Max-Margin Classifications	235
10.1	Support Vector Machines (SVMs)	236
10.1.1	Loss Function and Risk	237
10.1.2	Structural Risk Minimization	237
10.1.3	Support Vector Machines.....	239
10.1.4	Theoretical Justification.....	243
10.1.5	SVM Dual.....	244
10.1.6	Kernel Trick	245
10.1.7	SVM Training	248
10.1.8	Further Discussions	255
10.2	Maximum Margin Markov Networks	257
10.2.1	Primal and Dual Problems	257

10.2.2 Factorizing Dual Problem	259
10.2.3 General Graphs and Learning Algorithm	262
10.2.4 Max-Margin Networks vs. Other Graphical Models	262
Problems	264
A Appendix	267
References	269
Index	275
