<b>Preface</b>	<b>v</b>
<b>List of notations</b>	<b>xiii</b>
<b>1 Introduction</b>	<b>1</b>
1.1 From independence to dependence . . . . .	1
1.2 Mixing . . . . .	4
1.3 Mixingales and near epoch dependence . . . . .	5
1.4 Association . . . . .	6
1.5 Nonmixing models . . . . .	8
<b>2 Weak dependence</b>	<b>9</b>
2.1 Function spaces . . . . .	10
2.2 Weak dependence . . . . .	11
2.2.1 $\eta$ , $\kappa$ , $\lambda$ and $\zeta$ -coefficients . . . . .	12
2.2.2 $\theta$ and $\tau$ -coefficients . . . . .	14
2.2.3 $\tilde{\alpha}$ , $\tilde{\beta}$ and $\tilde{\phi}$ -coefficients. . . . .	16
2.2.4 Projective measure of dependence . . . . .	19
<b>3 Models</b>	<b>21</b>
3.1 Bernoulli shifts . . . . .	21
3.1.1 Volterra processes . . . . .	22
3.1.2 Noncausal shifts with independent inputs . . . . .	24
3.1.3 Noncausal shifts with dependent inputs . . . . .	25
3.1.4 Causal shifts with independent inputs . . . . .	31
3.1.5 Causal shifts with dependent inputs . . . . .	32
3.2 Markov sequences . . . . .	33
3.2.1 Contracting Markov chain. . . . .	35
3.2.2 Nonlinear AR( $d$ ) models . . . . .	36
3.2.3 ARCH-type processes . . . . .	36
3.2.4 Branching type models . . . . .	37

3.3	Dynamical systems . . . . .	38
3.4	Vector valued LARCH( $\infty$ ) processes . . . . .	42
3.4.1	Chaotic expansion of LARCH( $\infty$ ) models . . . . .	43
3.4.2	Bilinear models . . . . .	48
3.5	$\zeta$ -dependent models . . . . .	53
3.5.1	Associated processes . . . . .	53
3.5.2	Gaussian processes . . . . .	55
3.5.3	Interacting particle systems . . . . .	56
3.6	Other models . . . . .	59
3.6.1	Random AR models . . . . .	59
3.6.2	Integer valued models . . . . .	61
3.6.3	Random fields . . . . .	62
3.6.4	Continuous time . . . . .	65
<b>4</b>	<b>Tools for non causal cases</b>	<b>67</b>
4.1	Indicators of weakly dependent processes . . . . .	67
4.2	Low order moments inequalities . . . . .	69
4.2.1	Variances . . . . .	69
4.2.2	A $(2 + \delta)$ -order momentbound . . . . .	70
4.3	Combinatorial moment inequalities . . . . .	73
4.3.1	Marcinkiewicz-Zygmundtype inequalities . . . . .	77
4.3.2	Rosenthal type inequalities . . . . .	79
4.3.3	A first exponential inequality . . . . .	82
4.4	Cumulants . . . . .	84
4.4.1	General properties of cumulants . . . . .	84
4.4.2	A second exponential inequality . . . . .	93
4.4.3	From weak dependence to the exponential bound . . . . .	96
4.5	Tightness criteria . . . . .	98
<b>5</b>	<b>Tools for causal cases</b>	<b>103</b>
5.1	Comparison results . . . . .	103
5.2	Covariance inequalities . . . . .	110
5.2.1	A covariance inequality for $\gamma_1$ . . . . .	110
5.2.2	A covariance inequality for $\beta$ and $\tilde{\phi}$ . . . . .	111
5.3	Coupling . . . . .	114
5.3.1	A coupling result for real valued random variables . . . . .	115
5.3.2	Coupling in higher dimension . . . . .	116
5.4	Exponential and moment inequalities . . . . .	119
5.4.1	Bennett-type inequality . . . . .	120
5.4.2	Burkholder's inequalities . . . . .	123
5.4.3	Rosenthal inequalities using Rio techniques . . . . .	125
5.4.4	Rosenthal inequalities for $\tau_1$ -dependent sequences . . . . .	130
5.4.5	Rosenthal inequalities under projective conditions . . . . .	131
5.5	Maximal inequalities . . . . .	132

<b>6</b>	<b>Applications of SLLN</b>	<b>135</b>
6.1	Stochastic algorithms with non causal dependent input . . . . .	135
6.1.1	Weakly dependent noise . . . . .	137
6.1.2	$\gamma_1$ -dependent noise . . . . .	140
6.2	Examples of application . . . . .	142
6.2.1	Robbins-Monro algorithm . . . . .	142
6.2.2	Kiefer-Wolfowitz algorithm . . . . .	143
6.3	Weighted dependent triangular arrays . . . . .	143
6.4	Linear regression . . . . .	145
<b>7</b>	<b>Central limit theorem</b>	<b>153</b>
7.1	Non causal case: stationary sequences . . . . .	153
7.2	Lindeberg method . . . . .	155
7.2.1	Proof of the main results . . . . .	158
7.2.2	Rates of convergence . . . . .	161
7.3	Non causal random fields . . . . .	163
7.4	Conditional central limit theorem (causal) . . . . .	173
7.4.1	Definitions and preliminary lemmas . . . . .	174
7.4.2	Invariance of the conditional variance . . . . .	176
7.4.3	End of the proof . . . . .	178
7.5	Applications . . . . .	182
7.5.1	Stable convergence . . . . .	182
7.5.2	Sufficient conditions for stationary sequences . . . . .	184
7.5.3	$\gamma$ -dependent sequences . . . . .	189
7.5.4	$\tilde{\alpha}$ and $\tilde{\phi}$ -dependent sequences . . . . .	192
7.5.5	Sufficient conditions for triangular arrays . . . . .	194
<b>8</b>	<b>Donsker principles</b>	<b>199</b>
8.1	Non causal stationary sequences . . . . .	199
8.2	Non causal random fields . . . . .	200
8.2.1	Moment inequality . . . . .	201
8.2.2	Finite dimensional convergence . . . . .	202
8.2.3	Tightness . . . . .	205
8.3	Conditional (causal) invariance principle . . . . .	205
8.3.1	Preliminaries . . . . .	206
8.3.2	Finite dimensional convergence . . . . .	207
8.3.3	Relative compactness . . . . .	208
8.4	Applications . . . . .	209
8.4.1	Sufficient conditions for stationary sequences . . . . .	209
8.4.2	Sufficient conditions for triangular arrays . . . . .	212
<b>9</b>	<b>Law of the iterated logarithm (LIL)</b>	<b>213</b>
9.1	Bounded LIL under a non causal condition . . . . .	213
9.2	Causal strong invariance principle . . . . .	214

<b>10 The empirical process</b>	<b>223</b>
10.1 A simple condition for the tightness . . . . .	224
10.2 $\eta$ -dependent sequences . . . . .	225
10.3 $\tilde{\alpha}$ , $\tilde{\beta}$ and $\tilde{\phi}$ -dependent sequences . . . . .	231
10.4 $\theta$ and $\tau$ -dependent sequences . . . . .	233
10.5 Empirical copula processes . . . . .	234
10.6 Random fields . . . . .	236
<b>11 Functional estimation</b>	<b>247</b>
11.1 Some non-parametric problems . . . . .	247
11.2 Kernel regression estimates . . . . .	248
11.2.1 Second order and CLT results . . . . .	249
11.2.2 Almost sure convergence properties . . . . .	252
11.3 MISE for $\tilde{\beta}$ -dependent sequences . . . . .	254
11.4 General kernels . . . . .	260
<b>12 Spectral estimation</b>	<b>265</b>
12.1 Spectral densities . . . . .	265
12.2 Periodogram . . . . .	269
12.2.1 Whittle estimation . . . . .	274
12.3 Spectral density estimation . . . . .	275
12.3.1 Second order estimate . . . . .	277
12.3.2 Dependence coefficients . . . . .	279
<b>13 Econometric applications and resampling</b>	<b>283</b>
13.1 Econometrics . . . . .	283
13.1.1 Unit root tests . . . . .	284
13.1.2 Parametric problems . . . . .	285
13.1.3 A semi-parametric estimation problem . . . . .	285
13.2 Bootstrap . . . . .	287
13.2.1 Block bootstrap . . . . .	288
13.2.2 Bootstrapping GMM estimators . . . . .	288
13.2.3 Conditional bootstrap . . . . .	290
13.2.4 Sieve bootstrap . . . . .	290
13.3 Limit variance estimates . . . . .	292
13.3.1 Moments, cumulants and weak dependence . . . . .	293
13.3.2 Estimation of the limit variance . . . . .	295
13.3.3 Law of the large numbers . . . . .	297
13.3.4 Central limit theorem . . . . .	299
13.3.5 A non centered variant . . . . .	302
<b>Bibliography</b>	<b>305</b>
<b>Index</b>	<b>317</b>

Weak Dependence: With Examples and Applications

Dedecker, J.; Doukhan, P.; Lang, G.; Leon, J.R.; Louhichi, S.; Prieur, C.

2007, XIV, 322 p., Softcover

ISBN: 978-0-387-69951-6
