Preface	IX
0.1 Context	IX
0.2 Contributions of this Book	XII
0.3 What this Book Does Not Tell	XV
0.4 Reading Suggestion	XVI

Part I Microassembly Specificities

1 From Conventional Assembly to Microassembly	3
1.1 Introduction	3
1.2 Design of Monolithic Products for Microassembly	4
1.3 Combined Part Manufacturing and Assembly	6
1.4 Product External Assembly Functions	6
1.5 Product Internal Assembly Functions	6
1.6 Stochastic or Self-Assembly	7
1.7 Parallel Assembly	8
1.8 Conclusions	8
2 Classification of Forces Acting in the Microworld	9
2.1 Introduction	9
2.2 Classification Schemes of the Forces	10
2.3 Conclusions	12
3 Handling Principles for Microassembly	13
3.1 Introduction	13
3.2 Presentation of Gripping Principles	13
3.3 Classification of Gripping Principles	25
3.4 Comparison between Gripping Principles	28
3.5 Conclusions	29
4 Conclusions	35

Part II Modeling and Simulation of Capillary Forces

5	Introduction	39
6	First Set of Parameters	41
6.1	Introduction	41
6.2	Surface Tension	41
6.3	Young–Dupré Equation and Static Contact Angle	42
6.4	Laplace Equation	43
6.5	Effects of a Liquid Bridge on the Adhesion Between Two Solids	45
6.6	A Priori Justification of a Capillary Gripper	47
6.7	Conclusions	49
7	State of the Art on the Capillary Force Models at Equilibrium	51
7.1	Introduction	51
7.2	Energetic Approach: Interaction Between Two Parallel Plates	51
7.3	Energetic Approach: Other Configurations	55
7.4	Geometrical Approach: Circle Approximation	57
7.5	Geometrical Approach: Parabolic Approximation	61
7.6	Comparisons and Summary	61
8	Static Simulation at Constant Volume of Liquid	65
8.1	Introduction	65
8.2	Description of the Problem	65
8.3	Assumptions	66
8.4	Equations and Numerical Simulation	67
8.5	Discussion and Conclusions	71
9	Comparisons Between the Capillary Force Models	73
9.1	Introduction	73
9.2	Qualitative Arguments	73
9.3	Analytical Arguments	75
9.3.1	Definition of the Case Study	75
9.3.2	Preliminary Computations	76
9.3.3	Determination of the Immersion Height h	77
9.3.4	Laplace Equation Based Formulation of the Capillary Force	79
9.3.5	Energetic Formulation of the Capillary Force	79
9.3.6	Equivalence of Both Formulations	80
9.4	Conclusions	81

10	Example 1: Application to the Modeling of a Microgripper for Watch Bearings	83
10.1	Introduction	83
10.2	Presentation of the Case Study	83
10.3	Analytical Model Based on the Circle Approximation	86
10.4	Numerical Model Based on the Laplace Equation	89
10.5	Benchmark	93
10.6	Pressure Difference Saturation	94
10.7	Conclusions	96
11	Second Set of Parameters	97
11.1	Introduction	97
11.2	Surface Heterogeneities and Surface Impurities	97
11.3	Surface Roughness	98
11.4	Static Contact Angle Hysteresis	99
11.5	Dynamic Spreading	100
11.6	Conclusions	101
12	Limits of the Static Simulation	103
12.1	Introduction	103
12.2	Performances of the Assembly Machines	103
12.3	Nondimensional Numbers and Buckingham π Theorem	103
12.4	Another Approach: Use of a 1D Analytical Model	106
12.5	Limitations of the Static Model	108
12.6	Conclusions	110
13	Approaching and Rupture Distances	111
13.1	Introduction	111
13.2	Approaching Contact Distance	111
13.3	Rupture Distance and Residual Volume of Liquid	113
13.4	Mathematical and Notation Preliminaries	114
13.5	Volume Repartition	115
13.6	Rupture Condition and Rupture Gap	117
13.7	Analytical Benchmarks	119
13.8	Summary of the Methods	120
13.9	Comparison between the Methods	122
13.10	Conclusions	124
14	Example 2: Numerical Implementation of the Proposed Models	127
14.1	Introduction	127
14.2	Liquid Bridge Simulation for the Analysis of a Meniscus	127
14.3	Evaluation of the Double Iterative Scheme	131
14.4	Pseudodynamic Simulation	133
14.5	Conclusions	135

15	Conclusions of the Theoretical Study of Capillary Forces	137
-----------	---	------------

Part III Experimental Aspects

16	Introduction	141
17	Test Bed and Characterization	143
17.1	Introduction	143
17.2	Requirements	143
17.3	Test Bed Principles	145
17.3.1	Force Measurement	145
17.3.2	Drop Dispensing	146
17.3.3	Vision	148
17.4	CAD Model and Drawings	148
17.5	Characteristics of the Force Measurement Set Up	151
17.5.1	Typical Calibration	151
17.5.2	Linearity	151
17.5.3	Accuracy	152
17.5.4	Influence of a Misalignment on the Force Measurement	152
17.6	Characteristics of the Contact Angles Measurements	154
17.7	Surface Tension Measurement	155
17.8	Modus Operandi	155
17.9	Characterization	158
17.9.1	Set of Available Grippers	158
17.9.2	Set of Available Components	159
17.9.3	Set of Available Blades	160
17.9.4	Available Liquids	161
17.9.5	Contact Angles Characterization	161
17.10	Conclusions	162
18	Results	163
18.1	Introduction	163
18.2	Preliminary Results: Validation of the Simulation Code	163
18.2.1	Meniscus Profile	163
18.2.2	Comparison with the Analytical Expressions	164
18.2.3	Experimental Validation	166
18.3	Advancing vs Receding Contact Angle	168
18.4	Influence of the Gap	170
18.4.1	Force–Distance Curve	170
18.4.2	Tension Force vs. Laplace Force	171
18.5	Influence of the Gripper Geometry	171
18.6	Influence of the Surface Tension	172
18.7	Influence of the Contact Angle θ_1	174

18.8 Influence of the Relative Orientation	174
18.9 Auxiliary PTFE Tip	176
18.10 Dynamical Release	177
18.10.1 Simulation Results	177
18.10.2 Experimental Results	182
18.11 Approaching Contact and Rupture Distances	185
18.12 Shear Force	186
18.13 Conclusions	187
19 Example 3: Application to the Watch Bearing Case Study	189
19.1 Introduction	189
19.2 Available Grippers	189
19.3 Available Components	191
19.4 Liquid Properties	191
19.5 Liquid Dispensing	192
19.6 Contact Angles	195
20 Example 4: Application to the Watch Bearing Case Study: Results	199
20.1 Introduction	199
20.2 Picking	199
20.2.1 Introduction	199
20.2.2 Errors	200
20.2.3 Solutions	201
20.2.4 Automated Control	202
20.3 Placing	204
20.4 Compliance Effect	205
20.5 Force Measurement	206
20.5.1 Introduction	206
20.5.2 Modification of the Force Measurement Test Bed ...	206
20.5.3 Comparison Between Models and Experiments	206
20.5.4 Ongoing Experimental Study	208
20.6 Conclusions	209
21 Conclusions	211
21.1 Introduction	211
21.2 Picking Operations	211
21.3 Releasing Strategies	213
21.4 Design Aspects	215

Part IV General Conclusions and Perspectives

22 Conclusions and Perspectives	221
22.1 Conclusions	221
22.2 Perspectives	223

Part V Appendices

A Modeling Complements	227
A.1 Analytical Approximations of the Capillary Forces	227
A.1.1 Preliminary	227
A.1.2 Between a Sphere and a Plane	228
A.1.3 Between Two Spheres	230
A.2 Volume Repartition by the Energetic Approach	233
A.2.1 Assumptions, Notations, and Mathematical Preliminaries	233
A.2.2 L–V Interfacial Energy	234
A.2.3 Total Interfacial Energy	235
B Geometry Complements	237
B.1 Area and Volume of a Spherical Cap	237
B.2 Differential Geometry of Surfaces	238
B.2.1 Mean Curvature of a Surface	238
B.2.2 Mean Curvature of an Axially Symmetric Surface ..	239
B.3 Catenary Curve	240
C Comparison Between Both Approaches	243
D Symbols	247
References	251
