

## TABLE OF CONTENTS

<b>Preface</b>	<b>v</b>
<b>Introduction</b>	<b>1</b>
<b>Chapter I. Preliminaries on Modular Forms and Dirichlet Series</b>	<b>5</b>
1. Basic symbols and the definition of modular forms	5
2. Elementary Fourier analysis	13
3. The functional equation of a Dirichlet series	19
<b>Chapter II. Critical Values of Dirichlet <math>L</math>-functions</b>	<b>25</b>
4. The values of elementary Dirichlet series at integers	25
5. The class number of a cyclotomic field	39
6. Some more formulas for $L(k, \chi)$	45
<b>Chapter III. The Case of Imaginary Quadratic Fields and Nearly Holomorphic Modular Forms</b>	<b>53</b>
7. Dirichlet series associated with an imaginary quadratic field	53
8. Nearly holomorphic modular forms	55
<b>Chapter IV. Eisenstein Series</b>	<b>59</b>
9. Fourier expansion of Eisenstein series	59
10. Polynomial relations between Eisenstein series	66
11. Recurrence formulas for the critical values of certain Dirichlet series	75
<b>Chapter V. Critical Values of Dirichlet Series Associated with Imaginary Quadratic Fields</b>	<b>79</b>
12. The singular values of nearly holomorphic forms	79
13. The critical values of $L$ -functions of an imaginary quadratic field	84
14. The zeta function of a member of a one-parameter family of elliptic curves	96
<b>Chapter VI. Supplementary Results</b>	<b>113</b>
15. Isomorphism classes of abelian varieties with complex multiplication	113

15A. The general case	113
15B. The case of elliptic curves	117
16. Holomorphic differential operators on the upper half plane	120
<b>Appendix</b>	<b>127</b>
A1. Integration and differentiation under the integral sign	127
A2. Fourier series with parameters	130
A3. The confluent hypergeometric function	131
A4. The Weierstrass $\wp$ -function	136
A5. The action of $G_{\mathbf{A}^+}$ on modular forms	139
<b>References</b>	<b>145</b>
<b>Index</b>	<b>147</b>
