Part I: Supply Chains and Operations Modeling and Management

1 Supply chain operations management	3
1.1 Supply chain operations: a metamorphosis	4
1.2 Motivations and organization	5
1.3 Supply chains: needs and risks	10
1.4 Supply chains and operations management	12
1.5 Supply chains and inventory management	16
1.6 Quality and supply chain management	23
1.7 Games and supply chain management	29
1.8 Risk and supply chain management	35
Appendix: essentials of game theory	43
References	47
2 Supply chain games: modeling in a static framework	51
2.1 Static games in supply chains	51
2.2 Production/pricing competition	57
2.2.1 The pricing game	57
2.2.2 The production game	69
2.3 Stocking competition with random demand	81
2.3.1 The stocking game	81
2.3.2 The outsourcing game	92
2.4 Inventory competition with risk sharing	102
2.4.1 The inventory game with a buyback option	102
2.4.2 The inventory game with a purchasing option	109
References	116
3 Supply chain games: modeling in a multi-period framework	119
3.1 Stocking game	119
3.1.1 The stocking game in a multi-period formulation	119
3.1.2 The two-period system-wide optimal solution	122
3.1.3 Game analysis	126

3.2 Replenishment game: case studies	137
3.2.1 The replenishment game in a multi-period formulation	139
3.2.2 Game analysis	143
3.2.3 Empirical results and numerical analysis	150
References	153

Part II: Intertemporal Supply Chain Management

4 Supply chain games: modeling in an intertemporal framework	159
4.1 Differential games in supply chains	159
4.2 Intertemporal production/pricing competition	163
4.2.1 The differential pricing game	163
4.2.2 The differential production game	179
4.3 Intertemporal inventory games	193
4.3.1 The differential inventory game with endogenous demand	194
4.3.2 The differential inventory game with exogenous demand	218
4.4 Intertemporal subcontracting competition	238
4.4.1 The production balancing game	238
4.4.2 The differential outsourcing game	257
4.5 Intertemporal co-investment in supply chains	277
4.5.1 The differential investment and labor game	277
4.5.2 Short-run and long-run cooperation	288
References	296
5 Supply chain games: modeling in an intertemporal framework with periodic review	299
5.1 Two-period inventory outsourcing	299
5.2 Game analysis	314
References	322
6 Sustainable collaboration in supply chains	323
6.1 Multi-echelon supply chains with uncertainty	323
6.2 Supply chains with limited resources	335
6.2.1 Production control of parallel producers with random demands for products	336
6.2.2 Production control of parallel producers with maintenance	354
6.3 Supply chains with random yield	363
References	373

Part III: Risk and Supply Chain Management

7 Risk and supply chains	377
7.1 Risk in supply chains	378
7.2 Risk practice in supply chains	383
7.3 Supply chain risks and money	386
7.4 Risk valuation	389
7.5 Selected cases and problems	403
7.6 Collaboration, risks and supply chains	412
References	424
8 Quality and supply chain management	431
8.1 Quality and contracts	433
8.2 Mutual sampling	436
8.2.1 The risk neutral game	438
8.2.2 Centralized control and collaboration	445
8.3 Yield and control	452
8.3.1 The supply quality and control game	454
8.3.2 Optimal yield	459
8.4 Risk in a collaborative supply chain	463
8.4.1 A Neymann-Pearson framework for risk control	463
8.4.2 Special cases and extensions	470
References	479
Appendix: optimality conditions in single- and two-player dynamic games	483
A1.1 Dynamic problems	483
A1.2 Dynamic programming	487
A1.3 Stochastic dynamic programming	493
A1.4 The maximum principle	496
A1.5 Non-cooperative dynamic games	500
References	506
Index	507
