

Contents

- 1 Introduction to Solder Alloys and Their Properties 1**
 - 1.1 Evolution of Packaging Architectures2
 - 1.2 Solder Alloys6
 - 1.2.1 SnPb Alloys.....7
 - 1.2.2 Pb-free Alloys.....8
 - 1.2.3 Specialized Processing and Microalloying8
 - 1.3 Wetting and Joint Formation9
 - 1.4 Monotonic Properties of Solder Alloys10
 - 1.5 Creep and Stress Relaxation15
 - 1.5.1 Cyclic Behavior and Creep Fatigue Interaction17
 - 1.5.2 Microstructure and Cyclic Behavior23
 - References25

- 2 Packaging Architecture and Assembly Technology..... 29**
 - 2.1 Packaging Architectures29
 - 2.1.1 Leadless Semiconductor Packages29
 - 2.1.2 Package and Lead Types.....30
 - 2.1.3 Lead Finishes.....32
 - 2.2 Pure Sn Coatings – Tin Pest and Tin Whiskers34
 - 2.2.1 Tin Pest – The Allotropic Transformation of Sn34
 - 2.2.2 Extrusions – Whisker Growth35
 - 2.3 Ball-grid Arrays and Chip-scale Packages.....37
 - 2.3.1 Flip-chip Packaging.....38
 - 2.3.2 Pb-free BGA, CSP and Flip Chips39
 - 2.4 Assembly Technology40
 - 2.4.1 Solder Paste40
 - 2.4.2 Stenciling44
 - 2.4.3 Solder-paste Performance: Slumping45
 - 2.4.4 Reflow Soldering.....47
 - 2.4.5 Wave Soldering48
 - 2.4.6 Cleaning.....50
 - References50

3	Wetting and Joint Formation	53
3.1	Wetting	55
3.1.1	Basic Wetting Mechanics	55
3.1.2	Reactive Wetting of Sn on Substrates	57
3.1.3	Fluxes	58
3.1.4	Wetting Characteristics of Binary Eutectic Pb-free Solder Alloys	61
3.1.5	Wetting Characteristics of Ternary SnAgCu Alloys	63
3.2	Solderability and Solderability Testing	63
3.2.1	Primary Solderability Defects	64
3.2.2	Immersion Testing.....	65
3.2.3	The Wetting Balance.....	66
3.2.4	Importance of Flux Activity in Wetting and Solderability Testing	68
3.3	Solidification	70
3.3.1	Basic Theory of Solidification.....	70
3.3.2	Solidification and Melting Studies in Lead-Free Solders by Differential Scanning Calorimetry	72
3.4	As-cast Microstructures of Solder Alloys.....	73
3.4.1	SnPb Eutectic.....	74
3.4.2	SnAg Eutectic Solder	74
3.4.3	SnAgCu Ternary Solders	75
3.5	Segregation and Solidification Defects in some Pb-free Alloys	75
	References	77
4	Microstructural Instability in Solders	79
4.1	Effects of Microstructural Coarsening and Aging on Properties of Solder.....	79
4.2	Sources of Microstructural Instability in Solder	82
4.3	Thermodynamics of Microstructural Instability.....	83
4.4	Kinetics of Coarsening Processes in Microstructure.....	84
4.4.1	Grain-growth Models	84
4.4.2	Mechanical Instability	85
4.4.3	A Simplified Model for Thermal Coarsening	85
4.4.4	Strain and Thermal Coarsening in SnAgCu	88
4.5	Quantifying Alloy Effects on Microstructure.....	91
	References	94
5	Intermetallic Formation and Growth	97
5.1	Characteristics of Intermetallic Compounds	97
5.1.1	Cu-Sn.....	98
5.1.2	Ag-Sn.....	102
5.1.3	Au-Sn	103
5.1.4	Ni-Sn	106

5.2	Growth Kinetics of IMCs in Layered Morphologies.....	107
5.2.1	Thermodynamic Driving Forces in Intermetallic Systems	107
5.2.2	Kinetics and Diffusion: Basic Theory.....	112
5.2.3	Experimental Kinetics for IMC Growth in Solders.....	112
5.3	Characterization of IMC Layers and Secondary Phases	116
5.3.1	Microstructural Preparation and Samples	116
5.3.2	SEM and EDX.....	117
5.3.3	Hardness and Mechanical Properties	117
5.3.4	X-ray Diffraction.....	121
	References	122
6	Mechanical Properties and Creep Behavior	127
6.1	Monotonic Properties of Solders.....	127
6.1.1	Basic Monotonic Behavior	127
6.1.2	Pb-free Alloys: Strength vs Ductility.....	129
6.1.3	Temperature and Strain-rate Sensitivity	131
6.1.4	Strain-rate Sensitivity: Estimating Fatigue and Creep Performance from Tensile Properties.....	133
6.2	Creep and Stress Relaxation	135
6.3	Influence of Microstructure.....	139
