Part I Methodology

1	Preliminaries	3
1.1	Analytic and Meromorphic Functions	4
1.2	Control Systems	8
1.3	Linear Algebraic Setting	10
1.3.1	One-forms	11
1.3.2	Two-forms	11
1.3.3	s-forms	13
1.3.4	Exterior Product	13
1.4	Frobenius Theorem	14
1.5	Examples	16
	Problems	18
2	Modeling	21
2.1	State Elimination	21
2.2	Examples	25
2.3	Generalized Realization	26
2.4	Classical Realization	28
2.5	Input-output Equivalence and Realizations	29
2.5.1	Irreducible Input-output Systems	29
2.5.2	Reduced Differential Form	30
2.5.3	Input-output Equivalence	31
2.5.4	Realizations	31
2.6	A Necessary and Sufficient Condition for the Existence of a Realization	31
2.7	Minimal Realizations	33
2.8	Affine Realizations	34
2.8.1	A Realization Algorithm	34
2.8.2	Examples	37
2.9	The Hopping Robot	39

2.10	Some Models	41
2.10.1	Electromechanical Systems	41
2.10.2	Virus Dynamics	41
	Problems	42
3	Accessibility	45
3.1	Introduction	45
3.2	Examples	45
3.3	Reachability, Controllability, and Accessibility	46
3.4	Autonomous Elements	47
3.5	Accessible Systems	49
3.6	Controllability Canonical Form	50
3.7	Controllability Indices	51
3.8	Accessibility of the Hopping Robot Model	53
	Problems	53
4	Observability	55
4.1	Introduction	55
4.2	Examples	55
4.3	Observability	56
4.4	The Observable Space	57
4.4.1	An Observability Criterion	58
4.5	Observability Canonical Form	60
4.6	Observability Indices	61
4.7	Synthesis of Observers	62
4.7.1	Linearization by Input-output Injection and Observer Design 1	62
4.7.2	Linearization by Input-output Injection and Observer Design 2	66
	Problems	69
5	Systems Structure and Inversion	71
5.1	Introductory Examples	71
5.1.1	A Resistor Circuit	71
5.1.2	An Induction-resistor Circuit	72
5.2	Inverse Systems	72
5.3	Structural Indices	73
5.3.1	Structure at Infinity	74
5.4	Structure Algorithm	76
5.4.1	A Pseudoinverse System	78
5.4.2	Examples	79
5.4.3	Reduced Inverse Systems	81
5.5	Invertibility	83
5.6	Zero Dynamics	84
	Problems	87

6	System Transformations	89
6.1	Generalized State-space Transformation	89
6.2	Regular Generalized State Feedback	90
6.3	Generalized Output Injection	92
6.4	Canonical Form	93
6.4.1	Example	97
6.4.2	Example	98
6.5	Generalizing the Notion of Output Injection	99
	Problem	102

Part II Applications to Control Problems

7	Input-output Linearization	105
7.1	Input-output Linearization Problem Statement	105
7.2	Single-output Case	106
7.3	Multiooutput Case	106
7.4	Trajectory Tracking	109
7.4.1	Trajectory Tracking Problem Statement	109
7.4.2	Reference Trajectory Tracking: an Introductory Example	110
7.4.3	Reference Trajectory Tracking Without Internal Stability	111
7.4.4	A Second Example	111
7.4.5	Reference Trajectory Tracking With Internal Stability	112
	Problems	113
8	Noninteracting Control	115
8.1	Noninteracting Control Problem Statement	115
8.2	Static State Feedback Solution	116
8.3	Dynamic State Feedback Solution	116
8.4	Noninteracting Control via Quasi-static State Feedback	117
	Problem	118
9	Input-state Linearization	119
9.1	Input-state Linearization Problem Statement	119
9.2	Static State Feedback Solution	120
9.2.1	Dynamic State Feedback Solution	121
9.3	Partial Linearization	122
	Problem	126
10	Disturbance Decoupling	127
10.1	Solution of the Disturbance Decoupling Problem	128

11 Model Matching	131
11.1 A Special Form of the Inversion Algorithm	131
11.2 Model Matching Problem	134
11.3 Left Factorization	142
11.3.1 Left Factorization Problem (LFP)	143
12 Measured Output Feedback Control Problems	149
12.1 Input-output Linearization	149
12.1.1 Input-output Linearization via Static Output Feedback: the SISO Case	149
12.1.2 Input-output Linearization by Dynamic Output Feedback	151
12.1.3 Example	161
12.1.4 The Hopping Robot	162
12.2 Input-output Decoupling	164
12.2.1 Input-output Decoupling via Static Output Feedback ..	164
12.2.2 Input-output Decoupling Via Measurement Feedback ..	165
Problem	165
References	167
Index	177

Algebraic Methods for Nonlinear Control Systems

Conte, G.; Moog, C.H.; Perdon, A.M.

2007, XVI, 178 p., Hardcover

ISBN: 978-1-84628-594-3
