
Contents

Notation	xv
1 Polynomial Matrices	1
1.1 Polynomials	1
1.2 Basic Notions and Basic Operations on Polynomial Matrices	5
1.3 Division of Polynomial Matrices	9
1.4 Generalized Bezoute Theorem and the Cayley–Hamilton Theorem	16
1.5 Elementary Operations on Polynomial Matrices	20
1.6 Linear Independence, Space Basis and Rank of Polynomial Matrices	23
1.7. Equivalents of Polynomial Matrices	27
1.7.1 Left and Right Equivalent Matrices	27
1.7.2 Row and Column Reduced Matrices	30
1.8 Reduction of Polynomial Matrices to the Smith Canonical Form	32
1.9 Elementary Divisors and Zeros of Polynomial Matrices	37
1.9.1 Elementary Divisors	37
1.9.2 Zeros of Polynomial Matrices	39
1.10 Similarity and Equivalence of First Degree Polynomial Matrices	42
1.11 Computation of the Frobenius and Jordan Canonical Forms of Matrices ..	45
1.11.1 Computation of the Frobenius Canonical Form of a Square Matrix	45
1.11.2 Computation of the Jordan Canonical Form of a Square Matrix	47
1.12 Computation of Similarity Transformation Matrices	49
1.12.1 Matrix Pair Method	49
1.12.2 Elementary Operations Method	54
1.12.3 Eigenvectors Method	57
1.13 Matrices of Simple Structure and Diagonalisation of Matrices	59
1.13.1 Matrices of Simple Structure	59
1.13.2 Diagonalisation of Matrices of Simple Structure	61
1.13.3 Diagonalisation of an Arbitrary Square Matrix by the Use of a Matrix with Variable Elements	65
1.14 Simple Matrices and Cyclic Matrices	67
1.14.1 Simple Polynomial Matrices	67

1.14.2 Cyclic Matrices	69
1.15 Pairs of Polynomial Matrices.....	75
1.15.1 Greatest Common Divisors and Lowest Common Multiplicities of Polynomial Matrices	75
1.15.2 Computation of Greatest Common Divisors of a Polynomial Matrix	77
1.15.3 Computation of Greatest Common Divisors and Smallest Common Multiplicities of Polynomial Matrices	78
1.15.4 Relatively Prime Polynomial Matrices and the Generalised Bezoute Identity.....	84
1.15.5 Generalised Bezoute Identity	86
1.16 Decomposition of Regular Pencils of Matrices	87
1.16.1 Strictly Equivalent Pencils	87
1.16.2 Weierstrass Decomposition of Regular Pencils.....	92
1.17 Decomposition of Singular Pencils of Matrices	95
1.17.1 Weierstrass–Kronecker Theorem.....	95
1.17.2 Kronecker Indices of Singular Pencils and Strict Equivalence of Singular Pencils	102
2 Rational Functions and Matrices	107
2.1 Basic Definitions and Operations on Rational Functions	107
2.2 Decomposition of a Rational Function into a Sum of Rational Functions.....	116
2.3 Basic Definitions and Operations on Rational Matrices	124
2.4 Decomposition of Rational Matrices into a Sum of Rational Matrices	128
2.5 The Inverse Matrix of a Polynomial Matrix and Its Reducibility	132
2.6 Fraction Description of Rational Matrices and the McMillan Canonical Form.....	136
2.6.1 Fractional Forms of Rational Matrices.....	136
2.6.2 Relatively Prime Factorization of Rational Matrices	146
2.6.3 Conversion of a Rational Matrix into the McMillan Canonical Form.....	152
2.7 Synthesis of Regulators	155
2.7.1 System Matrices and the General Problem of Synthesis of Regulators	155
2.7.2 Set of Regulators Guaranteeing Given Characteristic Polynomials of a Closed-loop System	159
3 Normal Matrices and Systems.....	163
3.1 Normal Matrices	163
3.1.1 Definition of the Normal Matrix	163
3.1.2 Normality of the Matrix $[Is - A]^{-1}$ for a Cyclic Matrix	164
3.1.3 Rational Normal Matrices	168
3.2 Fraction Description of Normal Matrices	170
3.3 Sum and Product of Normal Matrices and Normal Inverse Matrices	175
3.3.1 Sum and Product of Normal Matrices	175
3.3.2 The Normal Inverse Matrix	180
3.4 Decomposition of Normal Matrices.....	182

3.4.1 Decomposition of Normal Matrices into the Sum of Normal Matrices	182
3.4.2 Structural Decomposition of Normal Matrices	185
3.5 Normalisation of Matrices Using Feedback.....	191
3.5.1 State-feedback	191
3.5.2 Output-feedback	197
3.6 Electrical Circuits as Examples of Normal Systems.....	200
3.6.1 Circuits of the Second Order	200
3.6.2 Circuits of the Third Order	203
3.6.3 Circuits of the Fourth Order and the General Case	210
4 The Problem of Realization	219
4.1 Basic Notions and Problem Formulation	219
4.2 Existence of Minimal and Cyclic Realisations	220
4.2.1 Existence of Minimal Realisations	220
4.2.2 Existence of Cyclic Realisations	224
4.3 Computation of Cyclic Realisations	226
4.3.1 Computation of a Realisation with the Matrix \mathbf{A} in the Frobenius Canonical Form.....	226
4.3.2 Computation of a Cyclic Realisation with Matrix \mathbf{A} in the Jordan Canonical Form.....	232
4.4 Structural Stability and Computation of the Normal Transfer Matrix	244
4.4.1 Structural Controllability of Cyclic Matrices	244
4.4.2 Structural Stability of Cyclic Realisation	245
4.4.3 Impact of the Coefficients of the Transfer Function on the System Description.....	247
4.4.4 Computation of the Normal Transfer Matrix on the Basis of Its Approximation	249
5 Singular and Cyclic Normal Systems.....	255
5.1 Singular Discrete Systems and Cyclic Pairs	255
5.1.1 Normal Inverse Matrix of a Cyclic Pair	257
5.1.2 Normal Transfer Matrix	260
5.2 Reachability and Cyclicity.....	264
5.2.1 Reachability of Singular Systems.....	264
5.2.2 Cyclicity of Feedback Systems	267
5.3 Computation of Equivalent Standard Systems for Linear Singular Systems	272
5.3.1 Discrete-time Systems and Basic Notions	272
5.3.2 Computation of Fundamental Matrices	276
5.3.3 Equivalent Standard Systems	279
5.3.4 Continuous-time Systems	282
5.4 Electrical Circuits as Examples of Singular Systems	285
5.4.1 RL Circuits	285
5.4.2 RC Circuits.....	288
5.5 Kalman Decomposition	291
5.5.1 Basic Theorems and a Procedure for System Decomposition.....	291

5.5.2 Conclusions and Theorems Following from System Decomposition	295
5.6 Decomposition of Singular Systems	298
5.6.1 Weierstrass–Kronecker Decomposition	298
5.6.2 Basic Theorems	299
5.7 Structural Decomposition of a Transfer Matrix of a Singular System	305
5.7.1 Irreducible Transfer Matrices	305
5.7.2 Fundamental Theorem and Decomposition Procedure	306
6 Matrix Polynomial Equations, and Rational and Algebraic Matrix Equations	313
6.1 Unilateral Polynomial Equations with Two Variables	313
6.1.1 Computation of Particular Solutions to Polynomial Equations	313
6.1.2 Computation of General Solutions to Polynomial Equations	319
6.1.3 Computation of Minimal Degree Solutions to Polynomial Matrix Equations	322
6.2 Bilateral Polynomial Matrix Equations with Two Unknowns	325
6.2.1 Existence of Solutions	325
6.2.2 Computation of Solutions	328
6.3 Rational Solutions to Polynomial Matrix Equations	332
6.3.1 Computation of Rational Solutions	332
6.3.2 Existence of Rational Solutions of Polynomial Matrix Equations ...	333
6.3.3 Computation of Rational Solutions to Polynomial Matrix Equations	334
6.4 Polynomial Matrix Equations	336
6.4.1 Existence of Solutions	336
6.4.2 Computation of Solutions	337
6.5 The Kronecker Product and Its Applications	340
6.5.1 The Kronecker Product of Matrices and Its Properties	340
6.5.2 Applications of the Kronecker Product to the Formulation of Matrix Equations	343
6.5.3 Eigenvalues of Matrix Polynomials	345
6.6 The Sylvester Equation and Its Generalization	347
6.6.1 Existence of Solutions	347
6.6.2 Methods of Solving the Sylvester Equation	349
6.6.3 Generalization of the Sylvester Equation	357
6.7 Algebraic Matrix Equations with Two Unknowns	358
6.7.1 Existence of Solutions	358
6.7.2 Computation of Solutions	360
6.8 Lyapunov Equations	361
6.8.1 Solutions to Lyapunov Equations	361
6.8.2 Lyapunov Equations with a Positive Semidefinite Matrix	363
7 The Realisation Problem and Perfect Observers of Singular Systems	367
7.1 Computation of Minimal Realisations for Singular Linear Systems	367
7.1.1 Problem Formulation	367
7.1.2 Problem Solution	369
7.2 Full- and Reduced-order Perfect Observers	376

7.2.1 Reduced-order Observers	378
7.2.2 Perfect Observers for Standard Systems	384
7.3 Functional Observers	392
7.4 Perfect Observers for 2D Systems	396
7.5 Perfect Observers for Systems with Unknown Inputs	400
7.5.1 Problem Formulation	400
7.5.2 Problem Solution	402
7.6 Reduced-order Perfect Observers for 2D Systems with Unknown Inputs	409
7.6.1 Problem Formulation	408
7.6.2 Problem Solution	411
8 Positive Linear Systems with Delays	421
8.1 Positive Discrete-time and Continuous-time Systems	421
8.1.1 Discrete-time Systems	421
8.1.2 Continuous-time Systems	424
8.2 Stability of Positive Linear Discrete-time Systems with Delays	425
8.2.1 Asymptotic Stability	425
8.2.2 Stability of Systems with Pure Delays	432
8.2.3 Robust Stability of Interval Systems	434
8.3 Reachability and Minimum Energy Control	437
8.3.2 Minimum Energy Control	442
8.4 Realisation Problem for Positive Discrete-time Systems	446
8.4.1 Problem Formulation	446
8.4.2 Problem Solution	447
8.5 Realisation Problem for Positive Continuous-time Systems with Delays	456
8.5.1 Problem Formulation	456
8.5.2 Problem Solution	457
8.6 Positive Realisations for Singular Multi-variable Discrete-time Systems with Delays	463
8.6.1 Problem Formulation	463
8.6.1 Problem Solution	466
A Selected Problems of Controllability and Observability of Linear Systems	473
A.1 Reachability	473
A.2. Controllability	477
A.3 Observability	480
A.4 Reconstructability	483
A.5 Dual System	485
6 Stabilizability and Detectability	485
References	487
Index	501

Polynomial and Rational Matrices
Applications in Dynamical Systems Theory

Kaczorek, T.

2007, XVI, 503 p. 10 illus., Hardcover

ISBN: 978-1-84628-604-9
