1 Benchmarking Concepts: An Introduction

<i>M.A. Johnson and D. Seborg</i>	1
1.1 Introduction.....	1
1.1.1 Setting the Scene for Performance Assessment.....	1
1.1.2 Key Techniques in Performance Improvement	3
1.2 Process Models and Modelling Methods	5
1.2.1 Business Process Models.....	5
1.2.2 Constructing a Business Process Model	6
1.2.3 Business Processes and Process Control	11
1.3 Performance Measurement	13
1.3.1 Business Process Performance Measures	13
1.3.2 Prioritizing Performance Measurements – Criteria Testing	15
1.3.3 Benchmark Performance Measures	16
1.4 Assessment of Performance.....	17
1.4.1 Simple Performance Assessment Tools.....	17
1.4.2 Statistical Process Control	22
1.5 Performance Assessment Analysis	24
1.5.1 Critical Incident Analysis	25
1.5.2 Relational Diagrams	27
1.5.3 Cause and Effect Charts	29
1.5.4 Root Cause Analysis.....	30
1.6 Performance Improvement Tools	31
1.7 The Art of Benchmarking.....	33
1.7.1 Benchmarking – An Introduction	34
1.7.2 Activities in a Benchmarking Study.....	36
1.7.3 Benefits of Benchmarking Studies	38
1.8 Concluding Discussion	40

2 Economic Auditing of Control Systems

<i>D. Uduehi, D. Laing and A.W. Ordys</i>	41
2.1 Chapter Outline.....	41

2.2	Formal Framework for Process Control Benchmarking Metrics	41
2.2.1	Goals of Benchmarking	44
2.2.2	Principles of Benchmarking	45
2.3	Framework for Intrgrated Control and Process Revenue Optimisation ...	45
2.3.1	Integrated Control and Process Revenue Optimisation (ICPRO) Method.....	48
2.4	Case Study: Oil Production Platform.....	52
2.4.1	ICPRO Step 1: Profile and Operations Assessment	53
2.4.2	ICPRO Step 2: Process and System Assessment.....	55
2.4.3	ICPRO Step 3: Financial Benefits and Control Strategy Correlation.....	60
2.4.4	ICPRO Step 4: Optimality Assessment	65
2.4.5	ICPRO Step 5: Control System Adaptation.....	68
2.4.6	Process Characteristics	68
2.4.7	Snapshot Benchmarking and Optimisation.....	71
2.4.8	Integrated Plant Auditing and Benchmarking	74
2.5	Conclusions.....	80
3	Controller Benchmarking Procedures – Data-driven Methods	
<i>D. Uduehi, A.W. Ordys, M.J.Grimble, P. Majecki and H. Xia</i>	81
3.1	Introduction.....	81
3.2	Introduction to Minimum Variance Control Benchmarking.....	82
3.2.1	Minimum Variance Control.....	83
3.2.2	Minimum Variance Benchmarking	85
3.2.3	Estimation of the Controller Performance Index	86
3.2.4	The Case of Non-zero Set-point.	89
3.3	Introduction to Generalized Minimum Variance Control Benchmarking.....	90
3.3.1	Generalized Minimum Variance Control	90
3.3.2	Generalised Minimum Variance Benchmarking	93
3.4	MV Benchmarking of Multivariable Systems	97
3.4.1	MIMO MV Control	97
3.4.2	MIMO MV Benchmarking.....	100
3.4.3	Performance Assessment Using Reduced <i>a priori</i> Information .	101
3.5	GMV Benchmarking of Multivariable Systems	108
3.5.1	Generalized Plant.....	109
3.5.2	Multivariable GMV Controller.....	110
3.5.3	GMV Benchmarking	110
3.6	Benchmarking Based on Predictive Performance Index.....	114
3.6.1	Introduction to Generalised Predictive Control	114
3.6.2	SISO GPC Benchmarking	117
3.6.3	Estimation of the Normalised SISO GPC Performance Index ...	120
3.7	Summary.....	125
4	Controller Benchmarking Procedures – Model-based Methods	
<i>A.W. Ordys, M.J. Grimble, D. Uduehi and P. Majecki</i>	127
4.1	Introduction.....	127

4.2	Multivariable Benchmarking Based on Predictive Performance	
	Index	128
4.2.1	Setting the Scene	128
4.2.2	GPC/LQGPC Controller Derivation.....	129
4.2.3	Calculation of the Performance in Closed-loop System	137
4.2.4	Multivariable Benchmark Definition.....	142
4.3	Introduction to Restricted Structure Controller Benchmarking	149
4.3.1	Restricted-structure Optimal Control	149
4.3.2	Restricted Structure Controller Benchmarking.....	153
4.4	MIMO Restricted Structure Benchmarking.....	155
4.4.1	Multivariable RS-LQG Optimal Control.....	155
4.4.2	Solution of the Parametric Optimization Problem.....	157
4.4.3	Benchmark Cost Calculation and Controller Performance	
	Index	160
4.4.4	Numerical Example	161
4.5	Weighting Selection for Benchmarking Algorithms.....	162
4.5.1	General Guidelines (No <i>a priori</i> Information)	162
4.5.2	Selection Based on the Existing Controller Structure.....	164
4.5.3	Process Model Available	165
4.6	Summary.....	168
5	Divided Wall Distillation Column Simulation Study	
	<i>D. Uduehi, H.Xia, M. Boll, M. Nohr, A.W. Ordys and S. Corsi</i>	169
5.1	System Description	169
5.1.1	Divided Wall Column Simulator	171
5.2	SISO Benchmarking Profile	173
5.3	MV and GMV Benchmarking	174
5.3.1	MV and GMV Benchmarking Test Set-up	174
5.3.2	Key Factors of MV and GMV Benchmarking.....	175
5.3.3	Benchmarking Results and Interpretation.....	178
5.4	RS-LQG Benchmarking	181
5.4.1	RS-LQG Benchmarking Test Set-up	181
5.4.2	Key Factors of RS-LQG Benchmarking.....	181
5.4.3	Loop Performance Analysis	184
5.4.4	Opportunity for Controller Re-tuning.....	189
5.5	MIMO Benchmarking Profile.....	190
5.5.1	GPC Benchmarking Test Set-up.....	190
5.5.2	Key Factors in GPC Benchmarking	191
5.5.3	Loop Performance Analysis	193
5.6	Summary of Results and Conclusions	196
6	Locating the Source of a Disturbance	
	<i>N. Thornhill</i>	199
6.1	Introduction and Motivation	199
6.1.1	Distributed Disturbances	199
6.1.2	Example.....	200
6.2	Survey of Fault Detection and Diagnosis	201

6.2.1	Model-based Methods	201
6.2.2	Process-history-based Methods	203
6.2.3	Supporting Methods for Fault Detection and Diagnosis.....	204
6.3	Disturbance Detection.....	206
6.3.1	Introduction	206
6.3.2	Principal Component Analysis	207
6.3.3	Other Factorizations of the Data Matrix	211
6.3.4	Oscillation Detection	213
6.4	Disturbance Diagnosis	215
6.4.1	Diagnosis of Distributed Disturbances	216
6.5	Industrial Case Study	220
6.5.1	The Process.....	220
6.5.2	Spectral and Oscillation Analysis	222
6.6	Chapter Summary	225
7	Benchmarking Control Loops with Oscillations and Stiction	
<i>A. Horch</i>	227
7.1	Introduction.....	227
7.2	Periodic Variations in Process Control Loops	228
7.2.1	Important Reasons for Oscillations	228
7.3	Automatic Oscillation Detection.....	238
7.4	Application of Minimum-variance-based Index	241
7.5	Oscillation Diagnosis.....	243
7.5.1	Automatic Detection of Stiction in Control Loops	243
7.5.2	External Oscillations.....	255
7.6	Conclusions.....	256
7.7	Acknowledgements.....	257
8	Controller Benchmarking Algorithms: Some Technical Issues	
<i>D. Uduchi, A.W. Ordys, H. Xia, M. Bennauer, G. Zimmer and S. Corsi</i>	259
8.1	Introduction.....	259
8.2	Validating the SISO Benchmarking Algorithms.....	260
8.2.1	Plant Models.....	260
8.2.2	Disturbance Models.....	262
8.2.3	Nominal PID Controller	262
8.2.4	User-defined Parameters of Benchmarking Algorithms.....	263
8.2.5	Test Criteria Summary.....	263
8.2.6	Results: Feasible Applications of SISO Benchmarks.....	266
8.3	Validating the MIMO Benchmarking Algorithm	268
8.3.1	User-defined Parameters for Benchmarking.....	272
8.3.2	Test Criteria Summary.....	274
8.3.3	Results: Feasible Applications of MIMO Benchmarks	275
8.4	Industrial Case Study: Implementation Testing Using Siemens Gas Turbine Model	279
8.4.1	Siemens Power Plant Simulator.....	280
8.4.2	Operating Conditions.....	281
8.4.3	The Characteristics of the Load/Speed Controller.....	282

8.4.4	SISO Benchmarking Profile	283
8.4.5	RS-LQG Benchmarking Test	284
8.4.6	Key Factors of RS-LQG Benchmarking.....	284
8.4.7	MIMO Benchmarking Profile	288
8.4.8	MIMO Plant Model	289
8.4.9	The GPC Controller Design for the Linearised Plant	290
8.5	Conclusions: Using the Benchmark Algorithms.....	291
9	A Look Back and a Look Forward to New Research Directions	
<i>M.A. Johnson</i>	295
9.1	A Look Back.....	295
9.1.1	Economic Audits of Control Systems.....	296
9.1.2	Benchmarking Control Loops	297
9.1.3	Contributions to Performance Analysis.....	302
9.2	A Look Forward to New Research Directions	304
9.2.1	New Performance Metrics	304
9.2.2	Algorithm Development	304
9.2.3	Performance Analysis.....	305
9.2.4	Industrial Implementation.....	306
9.2.5	Final Conclusions	307
References	309
