List of Contributors	xix
1 Introduction	1
1.1 Introduction.....	1
1.2 Electromagnetic Compatibility	2
1.3 Power-quality.....	6
References.....	14
2 Power-quality Monitoring	15
2.1 Introduction.....	15
2.2 State-of-the-art	16
2.2.1 Historical Background	16
2.2.2 General-purpose Instrumentation.....	16
2.2.3 Specialised-purpose Instrumentation	17
2.3 Instrumentation Architecture	20
2.3.1 Safety Use of PQ Instrumentation	21
2.3.2 Number of Channels.....	23
2.3.3 Common Unified Channels	24
2.3.4 Independent Input Channels	25
2.3.5 Transducers.....	25
2.3.6 Signal-conditioning Module	29
2.3.7 Analog-to-digital Converter	30
2.3.8 Signal-processing Module	30
2.4 PQ Instrumentation Regulations	31
2.5 Harmonic Monitoring	33
2.6 Flicker Monitoring	35
2.7 Data Postprocessing.....	35
2.8 Management of PQ Files	37
2.8.1 COMTRADE.....	37
2.8.2 PQDIF... ..	37

2.9	Summary.....	38
	References.....	38
3	Joint Time Frequency Analysis of the Electrical Signal.....	41
3.1	Introduction	41
3.2	Application of JTFA to Electrical Signals	44
3.3	Review of Fundamental Mathematical Tools	46
3.3.1	Fourier Theory.....	47
3.4	Time Frequency Analysis Limits: Uncertainty Principle.....	49
3.5	JTFA Linear Methods.....	52
3.5.1	Windowed Fourier Transform (STFT) and Gabor Expansion.....	52
3.5.2	Adaptive Representation and Adaptive Transform.....	56
3.5.3	Wavelet Theory.....	57
3.6	Time-dependent Spectrum: Quadratic Transforms	62
3.6.1	STFT Spectrogram.....	62
3.6.2	Wigner–Ville Distribution and Pseudo–Wigner Ville Distribution.....	64
3.6.3	Cohen Class.....	65
3.6.4	Choi Williams Distribution.....	66
3.6.5	Conic Distribution.....	66
3.6.6	Gabor Spectrogram.....	66
3.6.7	Adaptive Spectrogram.....	67
3.7	Algorithms Summary.....	68
	References.....	71
4	Measurement and Analysis of Voltage Events	73
4.1	Introduction.....	73
4.2	Monitoring of Voltage Events	75
4.2.1	Performance of the IEC Standard Method in the Detection and Evaluation of Voltage Events.....	76
4.2.2	Other Methods for the Detection and Evaluation of Voltage Events	80
4.3	Effects of Voltage Events on Equipment.....	90
4.3.1	Voltage Tolerance of Equipment.....	91
4.3.2	Measurement System.....	92
4.3.3	Effect of Harmonic Distortion.....	94
4.4	Voltage-event Surveys.....	96
	References.....	100
5	Transient Mitigation Methods on ASDs	103
5.1.	Introduction.....	103
5.2.	Transient analysis	105
5.2.1	Analysis of CST Events.....	105
5.3.	Traditional Transient Mitigation Methods on ASDs	111
5.3.1	Review of Power System Mitigation Techniques.....	111
5.4.	New Mitigation Methods.....	114

5.4.1	Proposed Approaches to Mitigate Nuisance Tripping of CST Events.....	114
5.5	Example of Experimental Results.....	119
5.5.1	Design Example.....	119
5.5.2	Simulation Results.....	121
5.5.3	Experimental Results.....	122
5.6.	Conclusions.....	127
	References.....	127
6	Modern Arrangement for Reduction of Voltage Perturbations	129
6.1	Introduction	129
6.2	Influence of Load on the Power-quality	130
6.2.1	Investigation Results	133
6.2.2	Other Important Influences of Loads.....	136
6.3	Reduction on Load Influence on the Voltage Profile.....	140
6.3.1	Principle Compensation of the Load Influence	141
6.3.2	Review of Selection Problems.....	144
6.4	Mitigation of the Voltage Disturbance.....	155
6.4.1	Basic Concept and Methodological Questions	155
6.4.2	Modern Protection and Reconfiguration Devices.....	156
6.4.3	Compensation Devices	160
6.4.4	Immunisation – Standby Power-supply Devices	164
6.5	Usability of the Modern Power Electronics	167
6.5.1	General Model of Power-electronics Converters.....	168
6.5.2	Basic 3-phase Power-electronics Converters with AC Output ...	171
6.5.3	Multilevel Voltage Inverters as Arrangement to MV Grid.....	176
6.6	Summary.....	179
	References.....	179
7	Static Shunt PE Voltage-quality Controllers.....	183
7.1	Fundamentals of Shunt Compensation	183
7.2	Distribution Static Var Compensator (D-SVC)	186
7.2.1	Simple D-SVC Controllers.....	186
7.2.2	Combined D-SVC Controllers.....	187
7.3	Distribution Static Synchronous Compensator (D-STATCOM)	188
7.3.1	Topology	188
7.3.2	Principle of Operation	190
7.3.3	Load Compensation.....	192
7.3.4	Voltage Regulation	195
7.4	Other Shunt Controllers Based on D-STATCOM	197
7.4.1	Hybrid Arrangements	198
7.4.2	Controllers with Energy-storage Systems	200
7.5	Summary.....	202
	References.....	203
8	Static Series and Shunt-series PE Voltage-quality Controllers	205
8.1	Distribution Static Synchronous Series Compensators.....	206

8.1.1	Identification of Separate Components of the Supply-terminal Voltage	207
8.1.2	Harmonic Filtration and Balancing of the Voltage in 3-wire Systems	210
8.2	Dynamic Voltage Restorer (DVR).....	213
8.2.1	What It Is a DVR.....	213
8.2.2	Control Strategies of the DVR Arrangements	213
8.2.3	Comparison of the DVR Types	216
8.3	AC/AC Voltage Regulators	221
8.3.1	Electromechanical Voltage Regulators.....	222
8.3.2	Step-voltage Regulators.....	223
8.3.2	Continuous-voltage Regulators	224
8.4	Summary.....	227
	References.....	228
9	Active Power Line Conditioners.....	231
9.1.	Introduction.....	231
9.2.	Power-quality and Active Power Filters	233
9.2.1.	Distribution Static Compensator, DSTATCOM.....	234
9.2.2.	Series Active Filters	235
9.2.3.	Hybrid Filters.....	236
9.2.4.	Unified Power-quality Conditioner	237
9.3.	Power-electronic Inverters in APLCs	238
9.3.1.	Voltage-source Inverter Topologies	240
9.3.2.	Control of Voltage-source Inverters	250
9.4.	Strategies for Load Static Compensation.....	262
9.4.1.	Instantaneous Reactive Power Theory.....	262
9.4.2.	Instantaneous d-q Theory.....	267
9.5.	Practical Design.....	268
9.5.1.	Component-design Considerations.....	269
9.5.2.	Simulation Analysis.....	272
9.6.	APLC Prototyped Trough PC Acquisition Board.....	276
9.6.1.	Experimental System.....	277
9.6.2.	Results of a Practical Case.....	283
	References.....	287
10	Distributed Generation.....	293
10.1	Introduction	293
10.2	General Impact of Distributed Generation on Power-quality to Strong or Weak Electrical Systems	296
10.3	Dissimilar Effect of the Different Distributed Resources Technologies	296
10.4	Coordination between Overcurrent Protection and Sensitive Equipment Voltage Sag Immunity	296
10.4.1	Application of Specific Energy Concept	298
10.4.2	Transformation of Protective Device Time–Current Curves into Time–Voltage Curves, for Voltage-sag Coordination Studies ...	300

10.4.3 Mitigation of Distant Voltage Sag Penetration into Industrial Premises by Using Semirigid Connection.....	314
10.4.4 New Overcurrent-protection Schemes using Intelligence.....	317
10.5 Impact of DG on Recloser-Fuse Coordination.....	319
10.6 Harmonics Generated by Distributed Generators	320
10.7 Flicker Due to Wind Gusts and Tower Shadow.....	321
10.8 Ferroresonant Overvoltages.....	322
10.9 Conclusions.....	323
References.....	323
11 Electronic Loads and Power-quality	325
11.1. Introduction	325
11.2. Electromagnetic Disturbances	328
11.3. The Rabanales Campus Case Study.....	328
11.4. The Infrico Case Study	331
11.5. Mitigations Technologies	335
11.6. The Improvement of Electronic Power Supplies	339
11.7. Conclusion.....	349
References.....	350
12 Power-quality Factor for Electrical Networks	353
12.1 Quality of the Electrical Signal.....	355
12.2 Quantitative Formulations of Power-quality Aspects	356
12.2.1 System-frequency Variations	356
12.2.2 Total Current and Voltage Harmonic Distortion	357
12.2.3 Degree of Unbalance	358
12.2.4 Phase Displacements Between Corresponding Fundamental Voltage and Currents	359
12.3 Voltage-quality Factor and Power-quality Factor.....	361
12.3.1 Definition of the Power-quality Factor.....	361
12.3.2 Definition of the Voltage-quality Factor	362
12.4 Measurement of PQF and VQF	363
12.5 Illustrative Use of the Power-quality Factor	365
12.6 Quantitative Formulations of Power-quality Aspects Under Transient State Conditions.....	369
12.6.1 Fourier Analysis Versus Time Frequency analysis for Power-quality	369
12.6.2 Time Frequency-based Transient Quality Aspects (TQA)	371
12.6.3 Procedure to Obtain the Transient Quality Aspect	373
12.6.4 Application Example of Transient Disturbance	374
References.....	375
13 IEC 61850 and Power-quality Monitoring and Recording	379
13.1 Introduction.....	379
13.2 What is IEC 61850?.....	380
13.3 Logical Interfaces and Distributed Applications.....	384
13.4 Functional Hierarchy	386

13.5 The IEC 61850 Model 387

13.6 Distribution and Modelling of Functions
in Power-quality Monitoring Devices..... 392

13.6.1 Logical Nodes for Measurements 396

13.6.2 Logical Nodes for Power-quality Events 398

13.6.3 Logical Nodes for Recording 399

13.7 Power-quality Event Analysis in IEC 61850-based Systems..... 399

13.8 Recording of Power-quality-events 403

13.8.1 Waveform Recording..... 404

13.8.2 High and Low-speed Disturbance Recording 404

13.8.3 Periodic Measurement Logging 405

13.9 Recording Systems for Power-quality Event Analysis 405

13.10 Performance Requirements 408

13.11 High-speed Peer-to-peer Communications Applications 409
