## Part I The Method

---

<b>1</b>	<b>Basics of Electronic Structure Calculations</b>	<b>3</b>
1.1	Density Functional Theory	4
1.2	Methods for Solving the Kohn–Sham Equations	6
1.3	Chemical and Magnetic Disorder	8
1.4	Resumé of the EMTO Method	10
1.4.1	The Present Monograph	11
1.4.2	Genuineness	12
1.4.3	The EMTO Program Package	12
<b>2</b>	<b>Exact Muffin-tin Orbitals Method</b>	<b>13</b>
2.1	The Exact Muffin-tin Orbitals Formalism	14
2.1.1	Optimized Overlapping Muffin-tin Wells	14
2.1.2	Exact Muffin-tin Orbitals	16
2.1.3	Kink Cancellation Equation	20
2.1.4	Overlap Matrix	22
2.1.5	The Fermi Level	24
2.2	Electron Density	25
2.3	The Poisson Equation	27
2.3.1	Spherical Cell Approximation	27
2.3.2	The Effective Potential	30
2.3.3	Potential Sphere Radius $s_R$	33
<b>3</b>	<b>Slope Matrix</b>	<b>37</b>
3.1	Inhomogeneous Dyson Equation	38
3.1.1	The High–Low Off-diagonal Slope Matrix	40
3.1.2	Energy Derivatives of $S^a$	41
3.2	Hard Sphere Radius $a_R$	42
3.3	Real Space Cluster	45
3.4	Numerical Determination of the Slope Matrix	47

3.4.1	Systems with Narrow Bandwidth . . . . .	47
3.4.2	Systems with Wide Bandwidth . . . . .	50
3.4.3	Two-center Expansion . . . . .	56
<b>4</b>	<b>Full Charge Density Technique . . . . .</b>	<b>59</b>
4.1	Shape Function Technique . . . . .	60
4.1.1	Numerical Calculation of the Shape Function . . . . .	61
4.1.2	The $l$ -convergence of the Shape Function . . . . .	65
4.2	The FCD Total Energy . . . . .	67
4.2.1	Kinetic Energy . . . . .	68
4.2.2	Exchange-correlation Energy . . . . .	68
4.2.3	Intra-cell Electrostatic Energy . . . . .	69
4.2.4	Inter-cell Electrostatic Energy . . . . .	70
4.2.5	Electrostatic Interaction of Neighboring Cells . . . . .	71
4.2.6	The $l$ Summations . . . . .	75
<b>5</b>	<b>The EMTO-CPA Method . . . . .</b>	<b>83</b>
5.1	Coherent Potential Approximation . . . . .	83
5.2	Fundamentals of the EMTO-CPA Method . . . . .	86
5.2.1	Average EMTO-CPA Green Function . . . . .	86
5.2.2	Full Charge Density . . . . .	88
5.2.3	The EMTO-CPA Effective Potential . . . . .	90
5.2.4	The EMTO-CPA Total Energy . . . . .	91
5.3	EMTO-CPA Method versus Other CPA Methods . . . . .	93

---

## Part II Applications

---

<b>6</b>	<b>Ground-state Properties . . . . .</b>	<b>97</b>
6.1	Equation of State . . . . .	98
6.2	Single Crystal Elastic Constants . . . . .	101
6.2.1	Numerical Calculation of the Elastic Constants . . . . .	103
6.3	Polycrystalline Elastic Constants . . . . .	110
6.3.1	Averaging Methods . . . . .	111
6.4	Surface Energy and Stress . . . . .	115
6.4.1	Numerical Calculation of the Surface Energy and Stress . . . . .	116
6.5	Stacking Fault Energy . . . . .	117
6.5.1	Numerical Calculation of the Stacking Fault Energy . . . . .	118
6.6	Some Ideas about the Atomistic Modeling of the Mechanical Properties of Alloys . . . . .	119
6.7	Recommendations for EMTO Calculations . . . . .	121

<b>7</b>	<b>Ordered Solids</b>	125
7.1	Simple and Transition Metals	125
7.1.1	Equilibrium Bulk Properties	125
7.1.2	Vacancy Formation Energy	130
7.1.3	Surface Energy and Stress of Transition Metals	132
7.2	Non-metallic Solids	136
7.2.1	Equation of State for Selected Semiconductors and Insulators	136
7.2.2	Elastic Properties of Solid Helium under Pressure	137
7.2.3	The Magnesium-silicate and Scandium-aluminate Perovskites	141
7.3	Transition-metal Nitrides	145
<b>8</b>	<b>Binary Alloys</b>	149
8.1	The Single-site Approximation	149
8.2	Light Metal Alloys	151
8.2.1	Aluminum–Lithium Alloys	151
8.2.2	Other Aluminum-based Alloys	158
8.2.3	Magnesium–Aluminum Diboride	160
8.3	Hume–Rothery Alloys	161
8.3.1	Copper–Zinc Alloys	162
8.3.2	Cubic Silver–Zinc Alloys	163
8.3.3	Hexagonal Silver–Zinc Alloys	169
8.4	Binary Transition-metal Alloys	173
8.4.1	Iron–Magnesium Alloys at High Pressure	173
8.4.2	Elastic Constants of Vanadium–Niobium Alloys	175
8.4.3	Ferromagnetic Fe-based Binary Alloys	178
8.4.4	Paramagnetic Fe-based Binary Alloys	179
8.5	Cerium–Thorium Alloys	181
8.6	Surface Concentration Profile	184
<b>9</b>	<b>Iron–chromium–nickel Alloys</b>	189
9.1	Modeling the Alloy Steels	189
9.2	Elastic Properties of Alloy Steels	191
9.2.1	Elastic Constants of FeCrNi Alloys	191
9.2.2	Elastic Property Maps	194
9.2.3	Quaternary FeCrNi-based Alloys	196
9.2.4	Misfit Parameters of FeCrNiM Alloys	198
9.3	Stacking Fault Energy of Alloy Steels	200
9.3.1	Theoretical Stacking Fault Energy versus Experimental Data	200
9.3.2	Magnetic Stacking Fault Energy	203

---

**Part III Auxiliary Material**

---

<b>A</b>	<b>Exchange-correlation Approximations</b>	209
A.1	Local Density Approximation	210
A.2	Generalized Gradient Approximation	212
A.3	Local Airy Gas Approximation	213
<b>B</b>	<b>Mathematical Relations</b>	215
B.1	Real Harmonics	215
B.2	Rotation Matrix	217
B.3	Bessel and Neumann Functions	217
B.4	Residue Theorem	219
<b>C</b>	<b>Self-consistent Total Energy Calculations</b>	221
C.1	Numerical Details for Chapter 7	221
C.2	Numerical Details for Chapter 8	222
C.3	Numerical Details for Chapter 9	222
	<b>References</b>	225
	<b>Index</b>	237

Computational Quantum Mechanics for Materials  
Engineers

The EMT0 Method and Applications

Vitos, L.

2007, XII, 237 p. 92 illus., Hardcover

ISBN: 978-1-84628-950-7
