Part I Atomic Structure, X-ray Physics and Radiation Detection

1	X-Ray Physics and Practice	3
1.1	Historical Development of X-Ray Physics	3
1.2	Significance of Atomic Data for Practice	5
2	Physical Fundamentals	9
2.1	Electronic Configurations and Atomic Ground States	9
2.1.1	Occupation of Electronic Levels	9
2.1.2	Systematics of Electron Energy Levels	11
2.1.3	Electron Shell Structure	22
2.2	Characteristic X-Rays	24
2.2.1	Classification	24
2.2.2	Line Profile and Line Broadening	36
2.2.3	X-Ray Emission Rates	46
2.2.4	X-Ray Energy Shifts	54
2.3	Fluorescence Yields	74
2.3.1	Implications for Basic Research and Practice	74
2.3.2	Notations and Definitions	74
2.3.3	Natural Level Widths and Fluorescence Yields	79
2.4	Ionization	79
2.4.1	Electron Impact ionization	79
2.4.2	Ionization in Ion–Atom and Ion–Ion Collisions	82
2.4.3	Multiple Ionization Processes	82
2.5	X-Ray Spectra and the Auger-Effect	86
2.5.1	Auger Electrons and Inner-Shell Ionization	86
2.5.2	Auger Effect and Energetic Width of X-Ray Emission Lines and Absorption Edges ...	87
2.5.3	Auger Effect and Intensities of X-Ray Emission Lines	87
2.6	X-Ray Atomic Scattering Factors	88
2.7	X-Ray Absorption	88
2.8	Continuous X-Rays	91
2.8.1	Properties of Electron Bremsstrahlung	93
2.8.2	Bremsstrahlung Cross-Sections	93
2.8.3	Radiation Length and Radiation Density	94
2.8.4	Electron Bremsstrahlung from X-Ray Tubes	94
2.8.5	Bremsstrahlung Intensity Distribution	95

2.8.6	Polarizational Bremsstrahlung	96
2.8.7	Bremsstrahlung Emission from Plasmas	96
3	Energy and Intensity Measurements	99
3.1	Calibration Normals for Electromagnetic Radiation	99
3.1.1	Classification of the Calibration Normals	99
3.1.2	X-Ray Calibration Normals	100
3.2	Energy and Intensity Calibration	103
3.2.1	Calibration of Wavelength-Dispersive Spectrometers	103
3.2.2	Calibration of Energy-Dispersive Spectrometers	104
3.3	X-Ray Detectors	106
3.3.1	Energy- and Wavelength-Dispersive X-Ray Spectroscopy	106
3.3.2	Gas Ionization Detectors	107
3.3.3	Scintillation detectors	116
3.3.4	Semiconductor Detectors	123
3.3.5	Crystal Diffraction Spectrometers	129
3.3.6	Cryogenic Detectors	144
4	Data Base	147
4.1	Electron Binding Energies	147
4.2	X-Ray Transition Energies	158
4.2.1	Standard Energy Range	158
4.2.2	Soft X-Ray Energy Region	163
4.3	X-Ray Fluorescence Yields	163
4.3.1	K-Shell X-ray fluorescence Yields	163
4.3.2	L X-Ray Fluorescence Yields	164
4.3.3	M X-Ray Fluorescence Yields	164
4.4	Energetic Level and Linewidths	168
4.5	X-Ray Emission Rates	170
4.6	Mass Attenuation Coefficients	173

Part II X-Ray Reference Data

5	X-Ray Emission Lines and Atomic Level Characteristics	179
6	X-Ray Transition Energies: Ordered by Energy/Wavelength	611
7	K-Shell Intensity Ratios and K-Vacancy Decay Rates	691
8	Atomic Scattering Factors	695
9	Analytical approximation of Atomic Scattering Factors	723
10	Mass Attenuation Coefficients	735
11	Fit Parameters for the Calculation of Mass Attenuation Coefficients	889

12	Atomic Weights and Isotope Masses	909
13	Parameters of Stable Isotopes	917
14	Parameters of Long-Live Radioactive Isotopes	925
15	Mean X-Ray Transition Energies	943
	References	953
