1 *Populus* Trees

A. M. Rae, N. R. Street, M. Rodríguez-Acosta	1
1.1 Introduction	1
1.1.1 Taxonomic Classification	2
1.1.2 Botany	2
1.1.3 Poplars as Crops	3
1.1.4 Economic Importance	4
1.1.5 Diseases	4
1.1.6 Breeding	4
1.1.7 Genetics and Breeding Programs	5
1.1.8 <i>Populus</i> Genome	6
1.1.9 <i>Populus</i> as a Model System	7
1.2 Construction of Genetic Linkage Maps	7
1.2.1 Molecular Markers	7
1.2.2 Linkage Maps	9
1.3 Detection of Quantitative Trait Loci	13
1.3.1 Disease	14
1.3.2 Stem and Growth Traits	14
1.3.3 Leaf Growth	15
1.3.4 QTLs and the Environment	15
1.3.5 Phenology QTLs	17
1.3.6 Metabolite QTLs	17
1.3.7 Candidate Genes	18
1.4 Advanced Studies	18
1.4.1 Genomic Resources for Poplar	18
1.4.2 The Poplar Genome Sequence	18
1.4.3 EST Resources	20
1.4.4 Expression Microarrays	20
1.4.5 Applying Genomic Resources for Candidate-Gene Discovery ..	21
References	23

2 Pines

C. Plomion, D. Chagné, D. Pot, S. Kumar, P. L. Wilcox, R. D. Burdon, D. Prat, D. G. Peterson, J. Paiva, P. Chaumeil, G. G. Vendramin, F. Sebastiani, C. D. Nelson, C. S. Echt, O. Savolainen, T. L. Kubisiak, M. T. Cervera, N. de María, M. N. Islam-Faridi	29
2.1 Introduction	29
2.1.1 History of the Genus	29
2.1.2 Cytogenetics, DNA Content, and Genome Composition	32
2.1.3 Economic Importance	34
2.1.4 Classical Breeding Objectives	34
2.1.5 Classical Breeding Achievements	35
2.1.6 Molecular Diversity	36

2.2	Construction of Genetic Maps	38
2.2.1	Development of Molecular Markers in Pines	38
2.2.2	Haploid- and Diploid-Based Mapping Strategies	40
2.2.3	Genetic Mapping Initiatives in Pines	41
2.2.4	Genetic vs. Physical Size and Practical Implication	46
2.2.5	Comparative Mapping: Toward the Construction of a Unified Pine Genetic Map	46
2.3	Genetic Architecture of Complex Traits	48
2.3.1	Strategy and Methods Used for QTL Detection in Single Family Pedigrees	48
2.3.2	QTL Discovery in Single Family Pedigree Designs	52
2.3.3	Future Direction on QTL Mapping	60
2.4	Marker-Assisted Breeding	61
2.4.1	Quality Control and Audit	61
2.4.2	Elucidation of Genetic Phenomena	62
2.4.3	Population Management	64
2.4.4	Selection and Breeding	65
2.4.5	Summary of Applications of DNA Polymorphisms in Conifer Breeding	69
2.5	Genomics Resources for the Genus <i>Pinus</i>	69
2.5.1	Efforts Toward Complete Genome Sequencing	69
2.5.2	Genomic Tools to Identify Genes of Economic and Ecological Interest	73
2.6	Future Perspective: Challenges for Molecular Breeding of Pines	77
	References	78

3 Spruce

	J. Bousquet, N. Isabel, B. Pelgas, J. Cottrell, D. Rungis, K. Ritland	93
3.1	Introduction	93
3.1.1	The spruce genus, <i>Picea</i>	93
3.1.2	Natural Hybridization	95
3.1.3	Molecular Genetic Variation and Mating System	95
3.1.4	Cytogenetics	96
3.1.5	Economic and Breeding Issues	96
3.2	Genetic Mapping	97
3.2.1	First-Generation Genetic Maps in Spruce Species	97
3.2.2	Second-Generation Mapping	97
3.2.3	Second-Generation Genetic Maps (as summarized in Table 1)	100
3.3	Comparative Mapping	101
3.3.1	Comparative Mapping Between Spruce Species	101
3.3.2	Comparative Mapping in the Pine Family	102
3.4	Molecular Breeding	103
3.4.1	Marker-Assisted Selection	103
3.4.2	Somatic Embryogenesis and Genetic Transformation	104
3.5	Genomics	105
3.5.1	cDNA Libraries, EST, and SNP Collections	105
3.5.2	Microarrays	105
3.5.3	Proteomics	105
3.5.4	Transgenic Spruce Lines	106

3.5.5	Genome Composition and Bacterial Artificial Chromosome (BAC) Libraries	106
3.5.6	High-Throughput SNP Genotyping	107
3.6	Summary	108
	References	108

4 Eucalypts

	A. A. Myburg, B. M. Potts, C. M. Marques, M. Kirst, J.-M. Gion, D. Grattapaglia, J. Grima-Pettenatti	115
4.1	Introduction	115
4.1.1	History of the Crop	115
4.1.2	Botany	116
4.1.3	Economic Importance	119
4.1.4	Classical Breeding Objectives	119
4.1.5	Classical Breeding Achievements	120
4.1.6	Future Perspective: Challenges for Molecular Breeding of <i>Eucalyptus</i>	121
4.2	Genetic Linkage Mapping of Eucalypt Genomes	122
4.2.1	DNA Isolation for Genetic Mapping	122
4.2.2	Marker Availability	123
4.2.3	Map Construction	124
4.2.4	Physical Genome Size vs. Genetic Map Size	125
4.2.5	Segregation Distortion	126
4.2.6	Comparative Mapping	126
4.2.7	Future Perspective: Integration and Application of Genetic Linkage Maps	127
4.3	QTL Mapping in <i>Eucalyptus</i>	128
4.3.1	Historical Perspective on QTL Analysis	128
4.3.2	QTL Mapping in <i>Eucalyptus</i> , Limitations and Advantages	128
4.3.3	QTLs Identified in <i>Eucalyptus</i>	130
4.3.4	Future Perspective: from QTL to Gene	133
4.4	Gene Mapping in <i>Eucalyptus</i>	134
4.4.1	From Anonymous Markers to Candidate Genes	134
4.4.2	Traits and Genes of Interest in <i>Eucalyptus</i>	134
4.4.3	<i>Eucalyptus</i> Species and Populations Used for Gene Mapping ..	135
4.4.4	Genomic Resources for Gene Mapping in <i>Eucalyptus</i>	136
4.4.5	Gene Mapping in <i>Eucalyptus</i> : Technologies and Perspectives ..	137
4.4.6	Future Perspective: Comparative Gene Mapping and Candidate-Gene Analysis in <i>Eucalyptus</i>	138
4.5	Physical Mapping and Map-Based Cloning in <i>Eucalyptus</i>	139
4.5.1	Physical Mapping Methodologies and Their Use in <i>Eucalyptus</i>	140
4.5.2	Map-Based Cloning in <i>Eucalyptus</i>	143
4.5.3	Future Perspective: Overcoming Challenges to Map-Based Cloning in <i>Eucalyptus</i>	145
4.6	Conclusions: Opportunities for Genome Research and Molecular Breeding in <i>Eucalyptus</i>	145
4.6.1	A Community Linkage Map	146
4.6.2	An Integrated Physical and Genetic Linkage Map	146
4.6.3	Comparative Genome Mapping	146
4.6.4	Association Genetics	147
4.6.5	Integrative Genomics	147

4.6.6	Comparative Genomics	148
References	148

5 Fagaceae Trees

A. Kremer, M. Casasoli, T. Barreneche, C. Bodénès, P. Sisco, T. Kubisiak, M. Scalfi, S. Leonardi, E. Bakker, J. Buiteveld, J. Romero-Severson, K. Arumuganathan, J. Derory, C. Scotti-Saintagne, G. Roussel, M. E. Bertocchi, C. Lexer, I. Porth, F. Hebard, C. Clark, J. Carlson, C. Plomion, Hans-P. Koelewijn, F. Villani		161
5.1	Introduction	161
5.1.1	Evolutionary Biology and Phylogeny of the Fagaceae	162
5.1.2	Ploidy, Karyotype, and Genome Size in Fagaceae	162
5.2	Construction of Genetic Linkage Maps	165
5.2.1	Genetic Mapping in Forest Trees	165
5.2.2	Genetic Mapping Initiatives in Fagaceae	165
5.2.3	Genetic Linkage Maps for <i>Quercus</i> , <i>Castanea</i> , and <i>Fagus</i>	167
5.3	Comparative Mapping between <i>Quercus</i> , <i>Castanea</i> , and <i>Fagus</i>	169
5.3.1	Mapping of Microsatellites in <i>Quercus robur</i> , <i>Castanea sativa</i> , <i>C. mollissima</i> , and <i>C. dentata</i>	169
5.3.2	Mapping of EST-Derived Markers in <i>Q. robur</i> and <i>C. sativa</i> : Alignment of the 12 Linkage Groups between the Two Species	171
5.3.3	Mapping of Microsatellites and EST-Derived Markers in <i>Fagus sylvatica</i> , <i>Quercus robur</i> , and <i>Castanea sativa</i>	171
5.3.4	Assignment of Linkage Groups Between <i>Quercus</i> and <i>Castanea</i>	173
5.4	Genes Mapped in Oaks and Chestnut	173
5.4.1	Bud Burst	173
5.4.2	Hypoxia	173
5.4.3	Osmotic Stress	177
5.4.4	Differential Expression in Juvenile and Mature Oak Shoots ...	178
5.4.5	Blight Infection in Chestnut	178
5.5	QTL Detection	178
5.5.1	Phenotypic Traits Investigated	178
5.5.2	Strategies and Methods Used for QTL Detection	179
5.5.3	Number and Distribution of QTLs and Their Effects	183
5.6	Conclusion	183
References	184

6 Black Walnut

C. H. Michler, K. E. Woeste, P. M. Pijut		189
6.1	Introduction	189
6.1.1	Origin and History	189
6.1.2	Botany	189
6.1.3	Economic Importance	191
6.2	Black Walnut Genetics	191
6.2.1	Heritability of Important Traits and Selection Age	192
6.2.2	Local and Regional Adaptation	193
6.2.3	Methods in Black Walnut Breeding	193
6.2.4	Genetic Variance Measured by Neutral and Other Markers ...	193
6.2.5	Black Walnut Hybrids	194
6.2.6	General Genetic and Breeding Resources	194
6.3	Tissue Culture and Genetic Transformation	195

6.4	Future Scope of Works	195
	References	195

7 Douglas-Fir

J. E. Carlson, A. Traore, H. A. Agrama, K. V. Krutovsky	199
7.1 Introduction	199
7.2 Genetic Marker Development for Douglas-Fir Genome Mapping	199
7.3 Genetic Linkage Map Construction	200
7.3.1 Map Construction Using RFLP Markers	200
7.3.2 Map Construction Using RAPD Markers	201
7.3.3 SSRs and other new PCR-Based Markers for Douglas-Fir Genome Mapping	204
7.4 QTL Mapping and Marker-Assisted Selection (MAS)	204
7.5 SNPs and Trait Association Mapping	205
7.6 Comparative Genomics	205
7.7 Molecular Cytogenetics	206
7.8 Future Studies	207
References	207

8 Cryptomeria Japonica

T. Kondo, N. Kuramoto	211
8.1 Introduction	211
8.1.1 Brief History of the Crop	211
8.1.2 Botanical Descriptions	211
8.1.3 Economic Importance	212
8.1.4 Breeding Objectives	212
8.1.5 Classical Mapping Efforts	212
8.1.6 Classical Breeding Achievements	212
8.2 Construction of Genetic Maps	213
8.2.1 Brief History of Mapping Efforts	213
8.2.2 First-Generation Maps	213
8.2.3 Second-Generation Maps	213
8.3 Gene Mapping	218
8.4 Detection of Quantitative Trait Loci	218
8.5 Advanced Works	219
8.6 Future Scope of Works	219
References	219
