
Contents

Part I Quantum Optics

1	Quantum Mechanical Background	5
1.1	The Mathematical Framework	5
1.1.1	Complex Vector Spaces	6
1.1.2	Bases and Vector Decomposition	8
1.1.3	Linear Operators	10
1.1.4	Matrix Representation of Operators	15
1.2	Description of Quantum Systems	18
1.2.1	Physical Observables	18
1.2.2	Quantum Mechanical Hamiltonian	20
1.2.3	Algebraic Approach for the Harmonic Oscillator	21
1.2.4	Operators and Measurement	28
1.2.5	Heisenberg Uncertainty Principle	30
1.2.6	Time Evolution: The Schrödinger Equation	34
1.2.7	Heisenberg Picture	36
1.3	Density Operator	36
1.3.1	Pure and Mixed States	37
1.3.2	Expectation Value of an Operator	38
1.3.3	Reduced Density Operator	40
1.3.4	Time Evolution: The Von Neumann Equation	41
	Problems	42
2	Quantum Theory of Radiation	45
2.1	Maxwell's Equations and Field Quantization	45
2.1.1	Field Quantization in Open Space	49
2.1.2	Field Quantization in a Cavity	52
2.2	Quantum States of the Field	53
2.2.1	Single-Mode Cavity Field	53
2.2.2	Free Electromagnetic Field	57
2.3	Photon Detection and Correlation Functions	59

2.4	Representations of the Field	63
2.4.1	Coherent State Representation	63
2.4.2	Quasi-Probability Distributions	66
	Problems	71
3	Atom in an External Radiation Field	73
3.1	One Electron Atom	73
3.1.1	Electronic States of an Atom	73
3.1.2	Angular Momentum and Spin in Quantum Theory	78
3.1.3	Spin–Orbit Coupling	80
3.2	Coupling of Radiation Field with Atomic Electron	81
3.3	Two-Level Atom Interacting with Monochromatic Fields	84
3.3.1	Interaction of an Atom with a Classical Field	85
3.3.2	Interaction of an Atom with a Quantized Field: Jaynes–Cummings Model	89
3.4	Two-Level Atom in a Harmonic Potential	96
3.5	Quantum System Coupled to a Reservoir	100
3.5.1	Single State Coupled to a Continuum of States	101
3.5.2	Spontaneous Decay of an Excited Atom in Open Space	104
3.6	Three-Level Atom	108
	Problems	116
4	System-Reservoir Interaction	119
4.1	Reduced Density Operator	119
4.1.1	General Master Equation	119
4.1.2	Spontaneous Decay of a Two-Level Atom	125
4.1.3	Driven Two-Level Atom	128
4.2	Quantum Stochastic Wavefunctions	133
4.2.1	General Formulation	133
4.2.2	Application to a Driven Two-Level Atom	136
4.3	Heisenberg–Langevin Equations of Motion	139
4.3.1	General Formulation	140
4.3.2	Application to a Two-Level Atom	144
	Problems	149
5	Cavity Quantum Electrodynamics	151
5.1	Single Mode Cavity Field Coupled to a Reservoir	151
5.1.1	Master Equation	153
5.1.2	Stochastic Wavefunctions	156
5.1.3	Fokker–Planck Equation	158
5.1.4	Heisenberg–Langevin Equations of Motion	161
5.2	Atom in a Damped Cavity	165
5.3	Single Photons on Demand from Atom in a Cavity	170
	Problems	176

6	Field Propagation in Atomic Media	179
6.1	Propagation Equation for Slowly Varying Electric Field	179
6.2	Field Propagation in a Two-Level Atomic Medium.....	184
6.3	Field Propagation in a Three-Level Atomic Medium	189
	Problems	197

Part II Quantum Information

7	Elements of Classical Computation	203
7.1	Bits and Memory	203
7.2	Circuits	204
7.2.1	Wires and Gates	204
7.2.2	Circuit Examples	205
7.2.3	Elements of Universal Circuit Construction	207
7.3	Computational Resources	208
7.4	Reversible Computation	208
	Problems	210
8	Fundamentals of Quantum Information	211
8.1	Quantum Bits and Memory	211
8.2	Quantum Circuits	213
8.2.1	One Qubit Gates	213
8.2.2	Two and More Qubit Gates.....	215
8.2.3	Qubit Measurement	218
8.3	No-Cloning Theorem.....	220
8.4	Genuine Physical Qubits	221
8.4.1	Spin- $\frac{1}{2}$ Qubit	221
8.4.2	Photon Polarization Qubit.....	223
8.5	Entanglement, Decoherence and Quantum Erasure.....	226
8.6	Quantum Teleportation and Dense Coding.....	227
8.7	Quantum Cryptography	231
8.7.1	BB84 Protocol	233
8.7.2	B92 Protocol	234
8.7.3	EPR Protocol.....	235
8.8	Einstein–Podolsky–Rosen Paradox	235
8.8.1	Local Hidden Variable and Bell’s Inequality.....	237
8.8.2	Violations of Bell’s Inequality	240
8.8.3	Greenberger–Horne–Zeilinger Equality	243
8.9	Entropy and Information Theory	245
	Problems	248

9	Principles of Quantum Computation	251
9.1	Operation of Quantum Computer	251
9.1.1	Universal Gates for Quantum Computation	251
9.1.2	Building Blocks of a Quantum Computer	254
9.2	Quantum Algorithms	254
9.2.1	Deutsch Algorithm	255
9.2.2	Deutsch–Jozsa Algorithm	257
9.2.3	Grover Algorithm	258
9.2.4	Quantum Fourier Transform	262
9.3	Quantum Computer Simulating Quantum Mechanics	265
9.4	Error Correction and Fault–Tolerant Computation	267
9.4.1	Classical Error Correction	268
9.4.2	Quantum Error Correction	269
9.4.3	Fault–Tolerant Quantum Computation	275
	Problems	279
10	Physical Implementations of Quantum Computation	281
10.1	Requirements for Physical Implementations of Quantum Information Processing	281
10.2	Rydberg Atoms in Microwave Cavity	282
10.2.1	Logic Gates and Multiparticle Entanglement	284
10.2.2	Schrödinger Cat States of the Cavity Field	287
10.3	Ion-Trap Quantum Computer	292
10.4	Cavity QED-Based Quantum Computer	296
10.5	Optical Quantum Computer	300
10.6	Quantum Dot Array Quantum Computer	304
10.7	Overview and Closing Remarks	308
	Problems	309
	Further Reading	311
	Index	319
