

Table of Contents

Foreword	V
Introduction	1
1 Kinetic Equations: From Newton to Boltzmann	5
2 The Navier–Stokes and Euler Equations – Fluid and Gas Dynamics	21
3 Granular Material Flows (with G. Toscani)	37
4 Chemotactic Cell Motion and Biological Pattern Formation (with D. Ölz)	55
5 Semiconductor Modeling	73
6 Free Boundary Problems and Phase Transitions	87
7 Reaction-Diffusion Equations – Homogeneous and Heterogeneous Environments	109
8 Optimal Transportation and Monge–Ampère Equations	129
9 Wave Equations	149
10 Digital Image Processing and Analysis – PDEs and Variational Tools	167
11 Socio-Economic Modeling (with G. Toscani)	185

Applied Partial Differential Equations:

A Visual Approach

Markowich, P.

2007, X, 206 p. 104 illus. in color., Hardcover
