Review	1
Crassulacean Acid Metabolism: Now and Then	3
Charles Barry Osmond	
1.1 A pathway to CAM via oxalate and malate in <i>Atriplex</i>	4
1.2 Sorting the phases of CAM	7
1.3 Biochemistry and diffusion as determinants of the $\delta^{13}\text{C}$ value in CAM plants; improved understanding of water use efficiency in C_3 plants	10
1.4 Regulation of CAM PEPCase in the dark and light; its role in the diurnal rhythms of CAM and in C_4 plants	12
1.5 Malic acid compartmentation in CAM	14
1.6 Light use efficiency and photoinhibition in CAM plants; the role of CO_2 supply in the avoidance of photoinactivation	15
1.7 Recycling of respiratory CO_2 in CAM and diel variation in the engagement of cyanide insensitive respiration	17
1.8 Field CAMpaigns	18
1.9 Origins of CAM and its future prospects in a high CO_2 world	21
1.10 A view from over the hill	22
Acknowledgements	25

Function of Genetic Material: Progressive Insight into Antimicrobial Peptides and their Transcriptional

Regulation35

Silke Hagen and Ulf Stahl

1	Introduction	35
2	What are antimicrobial peptides?	35
2.1	Function	36
2.2	Mechanism of action	38
2.3	Classification	39
3	Structure and gene regulation of antimicrobial peptides	39
3.1	Plants	40
3.1.1	Antimicrobial peptides	40
3.1.2	Structure	41
3.1.3	Regulation	43
3.2	Insects	46
3.3	Mammals	48
4	Application of antimicrobial peptides	49
4.1	Crop protection	50
4.2	Food preservation	51
4.3	Medical application	51
5	What more is to come?	52
6	Conclusions	52

Population Genetics: Evolutionary Features of Asexual Species 130

Jürgen Tomiuk and Wolfgang Köhler

1	Introduction	130
2	Modes and origin of asexuality	131
3	Origin of polyploidy	134
4	Population genetics	135
4.1	Clonal diversity	135
4.2	Geographic parthenogenesis/apomixis	136
4.3	Models	139
4.4	Statistics	142
4.5	Measures of genetic diversity	144
4.5.1	Clonal diversity	144
4.5.2	Allelic and genotypic diversity	144
4.5.3	Population structures	144
4.5.4	Differences between species	145
5	Conclusions	145
	Acknowledgements	146

Receptors for the Five Classical Plant Hormones 221

Hartwig Lüthen, Michael Böttger and Daniel Schenck

1 35 years of hunting receptors: we never got what we expected	221
2 Intracellular hormone receptors acting at the level of gene expression	222
2.1 Intracellular auxin perception by TIR1 and other F-box proteins	222
2.2 ABP1 or TIR1?	223
2.3 GID1, an intracellular receptor for the gibberellins	224
3 Membrane-bound receptors	225
3.1 Two-component receptors in ethylene signalling	225
3.1.1 ETR1 as a prototype ethylene receptor	226
3.1.2 ETR1 is reminiscent to bacterial two component signalling systems	227
3.1.3 A further two component ethylene receptors have been identified	229
3.1.4 How do two-component receptors transduce the ethylene signal?	229
3.2 Cytokinins are also perceived by two-component type receptors	230
3.2.1 More two-component cytokinin receptors for <i>Arabidopsis</i> and the rest of the plant world	233
3.2.2 How do two-component receptors transduce the cytokinin signal?	234
3.3 Candidates for the ABA receptor	235
3.3.1 A receptor-like kinase as a possible ABA receptor	235
3.3.2 At last: A plant G protein coupled receptor may be involved in ABA signalling	236
4 Perspective	237
