1	Biological Invasions: why it Matters	1
	WOLFGANG NENTWIG	

Section I Pathways of Biological Invasions

Short Introduction	9
WOLFGANG NENTWIG	

2	Pathways in Animal Invasions	11
	WOLFGANG NENTWIG	
2.1	Natural Dispersal Versus more Recent Invasions	11
2.2	Unintentional Introductions	12
2.2.1	Transports	12
2.2.1.1	Tramps in Vehicles and Planes	12
2.2.1.2	Waterways and Shipping	15
2.2.1.3	Transported Plant Material	16
2.2.2	Escapes	17
2.3	Intentional Introductions	18
2.3.1	Human Nutrition	18
2.3.1.1	Global Distribution of Domesticated Animals	18
2.3.1.2	Release of Mammals and Birds for Hunting	19
2.3.1.3	Release of Fish and Other Species	20
2.3.2	Beneficials or Biological Control Agents	22
2.3.2.1	Vertebrates	22
2.3.2.2	Invertebrates	23
2.3.3	Ornamental Animals and Pets	23
2.4	Conclusions	25
	References	26

3	Pathways in Plant Invasions	29
	INGO KOWARIK and MORITZ VON DER LIPPE	
3.1	Introduction	29
3.2	Introductions to a New Range: Relative Role of Deliberate Versus Accidental Transfer of Species	30
3.2.1	Introduction Mode and Invasion Success	31
3.2.2	Coinciding Pathways of Deliberate and Accidental Introductions	33
3.2.3	Invasions at the Infra-Specific Level Through Deliberate Introductions	34
3.3	Deliberate Secondary Releases Within the New Range	35
3.3.1	Cultivation as a Driver in Plant Invasions	36
3.3.2	From Clumped to Linear Patterns	37
3.4	Accidental Transfer of Non-Target Species	37
3.4.1	Transfer by Goods: Spatial-Temporal Separation of Propagule Transport and Release	38
3.4.2	Direct Association with Vehicles: Coincidence of Transport and Release	39
3.4.2.1	Adhesion to Vehicles	40
3.4.2.2	Transport Routes: from Patterns to Processes	40
3.4.3	Role of Living Conveyers	42
3.5	Conclusions	43
	References	44
4	Is Ballast Water a Major Dispersal Mechanism for Marine Organisms?	49
	STEPHAN GOLLASCH	
4.1	Introduction	49
4.2	Vectors	50
4.3	Relative Vector Importance	51
4.4	Ballast Water	52
4.5	Risk-Reducing Measures	53
4.6	Ballast Water Management Options	54
4.7	Conclusions	55
	References	56

Section II Traits of a Good Invader

Short Introduction	77
WOLFGANG NENTWIG	

6	Integrating Ecological and Evolutionary Theory of Biological Invasions	79
	RUTH A. HUFBAUER and MARK E. TORCHIN	
6.1	Introduction	79
6.2	Hypotheses to Explain Biological Invasion	82
6.2.1	Ecological Hypotheses	83
6.2.2	Evolutionary Hypotheses	85
6.3	Proposed Refinements to Hypotheses, Predictions and Tests	87
6.3.1	Refining the Enemy Release Hypothesis	87
6.3.2	Refining the Evolution of Increased Competitive Ability Hypothesis	88
6.4	Recent Syntheses and Synergies Between Hypotheses	88
6.5	Conclusions	93
	References	93

7	Traits Associated with Invasiveness in Alien Plants: Where Do we Stand?	97
	PETR PYŠEK and DAVID M. RICHARDSON	
7.1	History of the Search for Traits and Shifts in Research Focus	97
7.2	Comparative Analyses of Multispecies Datasets: Every Picture Tells a Story	99
7.2.1	Methodological Approaches: what is Being Compared? . . .	99
7.2.2	Data, Scale and Analysis	106
7.2.3	Main Findings of Comparative Multispecies Studies (1995–2005)	107
7.2.4	Biases to Bear in Mind: Residence Time, Scale and Stage . .	111
7.2.5	Message from Comparative Multispecies Studies	112
7.3	Studies of Congeners and Confamilials	113
7.3.1	Assumptions for Congeneric Studies	114
7.3.2	Searching for Generalities Within Genera	114
7.4	Combining Approaches: Pooling the Evidence	119
7.5	Conclusions: Where Do we Stand?	120

Section III Patterns of Invasion and Invasibility

Short Introduction	145
WOLFGANG NENTWIG	

9	Effects of Land Management Practices on Plant Invasions in Wildland Areas	147
MATTHEW L. BROOKS		

9.1	Introduction	147
9.2	Factors that Affect Plant Invasions	148
9.3	Linking Land Management Practices with Invasion Potential	151
9.3.1	Vehicular Route Management	151
9.3.1.1	Vehicles	153
9.3.1.2	Vehicular Routes	153
9.4	Managing Established Populations of Invasive Plants	155
9.4.1	Effects of Vegetation Management on Resource Availability	155
9.4.2	Effects of Vegetation Management on Propagule Pressure of Invaders	158
9.4.3	Predicting the Effects of Vegetation Management Treatments	158
9.5	Conclusions	159
	References	160

10	Nitrogen Enrichment and Plant Invasions: the Importance of Nitrogen-Fixing Plants and Anthropogenic Eutrophication	163
MICHAEL SCHERER-LORENZEN, HARRY OLDE VENTERINK, and HOLGER BUSCHMANN		

10.1	Introduction	163
10.2	Alterations of the N-Cycle by Exotic Invaders	164
10.2.1	Nitrogen-Fixing Species Among Invasives and Natives . . .	164
10.2.2	Nitrogen Input by N ₂ -Fixing Invasive Species	165
10.2.3	Major Invasive Nitrogen-Fixing Species	166
10.2.4	Facilitated Secondary Invasion	168
10.2.5	Nitrogen Fixation Suppressed by Invasion	169
10.3	Nitrogen Deposition and Exotic Invasions	169
10.3.1	N Deposition and Eutrophication in Natural Ecosystems . .	169
10.3.2	A Short Note on Mechanisms	170
10.3.3	Evidence for Effects of N Deposition on Plant Invasions? . .	171

10.3.3.1	Spatial Correlations	171
10.3.3.2	Observational Studies	173
10.3.3.3	Nutrient Addition Experiments	174
10.3.4	Interaction of N Deposition with Other Drivers of Environmental Change	175
10.4	Future Challenges	176

Section IV Ecological Impact of Biological Invasions

Short Introduction	215
WOLFGANG NENTWIG	

13	Impacts of Invasive Species on Ecosystem Services	217
HEATHER CHARLES and JEFFREY S. DUKES		

13.1	Introduction	217
13.2	Relating Costs of Invasives to Valuation of Ecosystem Services	218
13.2.1	Valuing Ecosystem Services	218
13.2.2	Interpreting Invasive Impacts	220
13.3	Mechanisms of Alteration	223
13.3.1	Species Extinctions and Community Structure	223
13.3.2	Energy, Nutrient, and Water Cycling	224
13.3.3	Disturbance Regime, Climate, and Physical Habitat	225
13.4	Which Ecosystems Are at Risk and Which Invasives Have the Greatest Impact?	226
13.5	Case Studies and Examples	229
13.5.1	Provisioning Ecosystem Services	229
13.5.2	Regulating Ecosystem Services	230
13.5.3	Cultural Ecosystem Services	231
13.5.4	Supporting Ecosystem Services	232
13.6	Conclusions	233
References		235

14	Biological Invasions by Marine Jellyfish	239
WILLIAM M. GRAHAM and KEITH M. BAYHA		

14.1	Introduction	239
14.2	Ctenophores	240
14.2.1	<i>Mnemiopsis leidyi</i>	240
14.2.2	<i>Beroë ovata</i>	241
14.3	Medusae (Cnidaria)	242
14.3.1	<i>Phyllorhiza punctata</i> (Scyphozoa)	242
14.3.2	<i>Cassiopea andromeda</i> (Scyphozoa)	243
14.3.3	<i>Rhopilema nomadica</i> (Scyphozoa)	244
14.3.4	<i>Aurelia</i> spp. (Scyphozoa)	244

14.3.5 *Maeotias marginata*, *Blackfordia virginica*,
 and *Moerisia lyonsii* (Hydrozoa) 245

14.4 Jellyfish Invasions: Blooms and Ecosystem Controls 245

14.5 The Role of Life-Histories 247

14.6 Taxonomic Confusion, Species Cryptsis,
 and Morphological Plasticity 248

14.7 Transport of Invasive Marine Jellyfish 249

14.8 Conclusions 250

References 250

**15 Effects of Invasive Non-Native Species
 on the Native Biodiversity in the River Rhine 257**
 BRUNO BAUR and STEPHANIE SCHMIDLIN

15.1 Introduction 257

15.2 The River Rhine 258

15.3 Native Biodiversity and Invasion History 260

15.4 Species Interactions and Mechanisms of Replacement . . . 264

15.4.1 Amphipods 264

15.4.2 Molluscs 266

15.5 Why Are There so many Non-Native Species in the Rhine? . 268

15.6 Conclusions 269

References 270

**16 Hybridization and Introgression Between Native
 and Alien Species 275**
 CARLO R. LARGIADÈR

16.1 Introduction 275

16.2 Definitions and Technical Aspects 277

16.2.1 Definition of Hybridization and Introgression 277

16.2.2 Genetic and Statistical Tools 278

16.3 Basic Types of Anthropogenic Hybridization:
 Empirical Examples 279

16.3.1 Hybridization Without Introgression 279

16.3.2 Hybridization with Introgression 281

16.4 Hybridization as a Stimulus for the Evolution of Invasiveness
 and the Emergence of Anthropogenic Hybrid Taxa 285

16.5 Can we Predict Introgressive Hybridization and its Outcome? 286

Contents		XV
16.5.1	Genetic Differentiation Between Taxa as an Indicator	286
16.5.2	Habitat Modifications	286
16.5.3	Introduction Intensity	287

Section V Economy and Socio-Economy of Biological Invasions

Short Introduction 313
WOLFGANG NENTWIG

**18 Plant, Animal, and Microbe Invasive Species
in the United States and World 315**
DAVID PIMENTEL, MARCIA PIMENTEL and ANNE WILSON

18.1 Introduction 315
18.2 Agricultural and Forestry Benefits from Introduced Species 316
18.3 Environmental Damages and Associated Control Costs . . . 316
18.3.1 Plants 317
18.3.2 Mammals 318
18.3.3 Birds 319
18.3.4 Amphibians and Reptiles 320
18.3.5 Fishes 321
18.3.6 Arthropods 321
18.3.7 Mollusks 322
18.4 Livestock Pests 323
18.5 Human Diseases 323
18.6 The Situation Today and Projections for the Future 324
18.7 Biological Control of Invasives 326

Section VI Prevention and Management of Biological Invasions

Short Introduction	351
WOLFGANG NENTWIG	

20 Economic Analysis of Invasive Species Policies	353
JULIA TOUZA, KATHARINA DEHNEN-SCHMUTZ, and GLYN JONES	

20.1 Introduction	353
20.2 Economic Instruments as Measures for Preventing Invasions	356
20.2.1 Risk-Related Taxes	356
20.2.2 Risk-Related Import Tariffs	357
20.2.3 Tradable Permits	358
20.3 Trade-offs Between Prevention and Control Strategies . . .	359
20.4 Uncertainty Surrounding Invasion Risk	361
20.5 Discussion	362
References	364

21 Phytosanitary Measures to Prevent the Introduction of Invasive Species	367
GUY J. HALLMAN	

21.1 Introduction	367
21.2 International Regulatory Organizations	369
21.3 Phytosanitary Measures	370
21.3.1 Phytosanitary Measures that Do not Involve Commodity Treatment	370
21.3.1.1 Non-Host Status	371
21.3.1.2 Systems Approach	372
21.3.2 Phytosanitary Treatments	374
21.3.2.1 Cold Treatment	375

21.3.2.2 Heated Air 376

21.3.2.3 Hydrogen Cyanide Fumigation 377

21.3.2.4 Methyl Bromide Fumigation 377

21.3.2.5 Phosphine Fumigation 378

21.3.2.6 Sulfuryl Fluoride Fumigation 378

21.3.2.7 Hot Water Immersion 379

21.3.2.8 Pesticidal Dips or Sprays 379

21.3.2.9 Ionizing Irradiation 379

21.3.2.10 Miscellaneous Treatments 380

21.3.2.11 Researched but not yet Applied Treatments 381

21.4 Future Challenges 381
