Preface	v
1 Elementary Sheaf Theory	1
1.1 Sheaves	1
1.2 Sheaf Cohomology	8
1.2.1 Injective Resolutions	8
1.2.2 Čech Cohomology	15
1.3 Complexes of Sheaves	20
2 Homological Algebra	27
2.1 The Homotopy Category of Complexes	27
2.2 Triangulated Categories	29
2.3 The Triangulation of the Homotopy Category	32
2.4 Derived Categories	39
2.4.1 Localization of Categories	40
2.4.2 Localization With Respect to Quasi-Isomorphisms	45
2.4.3 Derived Functors	52
3 Verdier Duality	59
3.1 Direct Image with Proper Support	59
3.2 Inverse Image with Compact Support	62
3.3 The Verdier Duality Formula	65
3.4 The Dualizing Functor	66
3.5 Poincaré Duality on Manifolds	69
4 Intersection Homology	71
4.1 Piecewise Linear Intersection Homology	71
4.1.1 Introduction	71
4.1.2 Stratifications	72
4.1.3 Piecewise Linear Intersection Homology	74
4.1.4 The Sheafification of the Intersection Chain Complex	82

4.2	Deligne's Sheaf	92
4.3	Topological Invariance of Intersection Homology	94
4.4	Generalized Poincaré Duality on Singular Spaces	97
5	Characteristic Classes and Smooth Manifolds	99
5.1	Introduction	99
5.2	Smooth Oriented Bordism	100
5.3	The Characteristic Classes of Chern and Pontrjagin	100
5.4	The Rational Calculation of Ω_*^{SO}	102
5.4.1	The Lower Bound	102
5.4.2	The Upper Bound	107
5.5	Surgery Theory	109
5.6	The L-Class of a Manifold: Approach via Tangential Geometry	117
5.7	The L-Class of a Manifold: Approach via Maps to Spheres	120
6	Invariants of Witt Spaces	123
6.1	The Signature of Spaces with only Even-Codimensional Strata	123
6.2	Introduction to Whitney Stratifications	127
6.2.1	Local Structure	130
6.2.2	Stratified Submersions	131
6.2.3	Stratified Maps	131
6.2.4	Normally Nonsingular Maps	131
6.3	The Goresky–MacPherson L-Class	132
6.4	Witt Spaces	133
6.5	Siegel's Calculation of Witt Bordism	135
6.6	Application of Witt Bordism: Novikov Additivity	137
7	T-Structures	141
7.1	Basic Definitions and Properties	141
7.2	Gluings of t-Structures	152
7.2.1	Gluings of Data	152
7.2.2	The Gluing Theorem	153
7.3	The Perverse t-Structure	157
8	Methods of Computation	161
8.1	Stratified Maps and Topological Invariants	161
8.1.1	Introduction	161
8.1.2	Behavior of Invariants under Stratified Maps	162
8.2	The L-Class of Self-Dual Sheaves	185
8.2.1	Algebraic Bordism of Self-Dual Sheaves and the Witt Group	185
8.2.2	Geometric Bordism of Spaces Covered by Sheaves	188
8.2.3	Construction of L-Classes	192
8.2.4	Poincaré Local Systems	198
8.2.5	Computation of L-Classes	207

8.3	The Presence of Monodromy	209
8.3.1	Meyer's Generalization	209
8.3.2	L-Classes for Singular Spaces with Boundary	211
8.3.3	Representability of Witt Spaces	213
9	Invariants of Non-Witt Spaces	217
9.1	Duality on Non-Witt Spaces: Lagrangian Structures	217
9.1.1	The Lifting Obstruction	219
9.1.2	The Category $SD(X)$ of Self-Dual Sheaves Compatible with IH.	219
9.1.3	Lagrangian Structures	222
9.1.4	Extracting Lagrangian Structures from Self-Dual Sheaves ..	224
9.1.5	Lagrangian Structures as Building Blocks for Self-Dual Sheaves	226
9.1.6	A Postnikov System	229
9.2	L-Classes of Non-Witt Spaces	230
9.3	Stratified Maps	232
9.3.1	The Category of Equiperverse Sheaves	233
9.3.2	Parity-Separated Spaces.	235
9.3.3	An Algebraic Bordism Construction	237
9.3.4	Characteristic Classes and Stratified Maps	238
9.4	The Presence of Monodromy	239
10	L^2 Cohomology	243
	References	251
	Index	255

Topological Invariants of Stratified Spaces

Banagl, M.

2007, XII, 264 p. 14 illus., Hardcover

ISBN: 978-3-540-38585-1
