
Contents

Part I Fourier Analysis

1	Fourier Series	3
1.1	Fourier Series of Functions with Periodicity 2π	3
1.1.1	Orthogonality of Trigonometric Functions	3
1.1.2	The Fourier Coefficients	5
1.1.3	Expansion of Functions in Fourier Series	6
1.2	Convergence of Fourier Series	9
1.2.1	Dirichlet Conditions	9
1.2.2	Fourier Series and Delta Function	10
1.3	Fourier Series of Functions of any Period	13
1.3.1	Change of Interval	13
1.3.2	Fourier Series of Even and Odd Functions	21
1.4	Fourier Series of Nonperiodic Functions in Limited Range	24
1.5	Complex Fourier Series	29
1.6	The Method of Jumps	32
1.7	Properties of Fourier Series	37
1.7.1	Parseval's Theorem	37
1.7.2	Sums of Reciprocal Powers of Integers	39
1.7.3	Integration of Fourier Series	42
1.7.4	Differentiation of Fourier Series	43
1.8	Fourier Series and Differential Equations	45
1.8.1	Differential Equation with Boundary Conditions	45
1.8.2	Periodically Driven Oscillator	49
	Exercises	52
2	Fourier Transforms	61
2.1	Fourier Integral as a Limit of a Fourier Series	61
2.1.1	Fourier Cosine and Sine Integrals	65
2.1.2	Fourier Cosine and Sine Transforms	67
2.2	Tables of Transforms	72

VIII Contents

2.3	The Fourier Transform	72
2.4	Fourier Transform and Delta Function	79
2.4.1	Orthogonality	79
2.4.2	Fourier Transforms Involving Delta Functions	80
2.4.3	Three-Dimensional Fourier Transform Pair	81
2.5	Some Important Transform Pairs	85
2.5.1	Rectangular Pulse Function	85
2.5.2	Gaussian Function	85
2.5.3	Exponentially Decaying Function	87
2.6	Properties of Fourier Transform	88
2.6.1	Symmetry Property	88
2.6.2	Linearity, Shifting, Scaling	89
2.6.3	Transform of Derivatives	91
2.6.4	Transform of Integral	92
2.6.5	Parseval's Theorem	92
2.7	Convolution	94
2.7.1	Mathematical Operation of Convolution	94
2.7.2	Convolution Theorems	96
2.8	Fourier Transform and Differential Equations	99
2.9	The Uncertainty of Waves	103
	Exercises	105

Part II Sturm–Liouville Theory and Special Functions

3	Orthogonal Functions and Sturm–Liouville Problems	111
3.1	Functions as Vectors in Infinite Dimensional Vector Space	111
3.1.1	Vector Space	111
3.1.2	Inner Product and Orthogonality	113
3.1.3	Orthogonal Functions	116
3.2	Generalized Fourier Series	121
3.3	Hermitian Operators	123
3.3.1	Adjoint and Self-adjoint (Hermitian) Operators	123
3.3.2	Properties of Hermitian Operators	125
3.4	Sturm–Liouville Theory	130
3.4.1	Sturm–Liouville Equations	130
3.4.2	Boundary Conditions of Sturm–Liouville Problems	132
3.4.3	Regular Sturm–Liouville Problems	133
3.4.4	Periodic Sturm–Liouville Problems	141
3.4.5	Singular Sturm–Liouville Problems	142
3.5	Green's Function	149
3.5.1	Green's Function and Inhomogeneous Differential Equation	149
3.5.2	Green's Function and Delta Function	150
	Exercises	157

4	Bessel and Legendre Functions	163
4.1	Frobenius Method of Differential Equations	164
4.1.1	Power Series Solution of Differential Equation	164
4.1.2	Classifying Singular Points	166
4.1.3	Frobenius Series	167
4.2	Bessel Functions	171
4.2.1	Bessel Functions $J_n(x)$ of Integer Order	172
4.2.2	Zeros of the Bessel Functions	174
4.2.3	Gamma Function	175
4.2.4	Bessel Function of Noninteger Order	177
4.2.5	Bessel Function of Negative Order	179
4.2.6	Neumann Functions and Hankel Functions	179
4.3	Properties of Bessel Function	182
4.3.1	Recurrence Relations	182
4.3.2	Generating Function of Bessel Functions	185
4.3.3	Integral Representation	186
4.4	Bessel Functions as Eigenfunctions of Sturm–Liouville Problems	187
4.4.1	Boundary Conditions of Bessel’s Equation	187
4.4.2	Orthogonality of Bessel Functions	188
4.4.3	Normalization of Bessel Functions	189
4.5	Other Kinds of Bessel Functions	191
4.5.1	Modified Bessel Functions	191
4.5.2	Spherical Bessel Functions	192
4.6	Legendre Functions	196
4.6.1	Series Solution of Legendre Equation	196
4.6.2	Legendre Polynomials	200
4.6.3	Legendre Functions of the Second Kind	202
4.7	Properties of Legendre Polynomials	204
4.7.1	Rodrigues’ Formula	204
4.7.2	Generating Function of Legendre Polynomials	206
4.7.3	Recurrence Relations	208
4.7.4	Orthogonality and Normalization of Legendre Polynomials	211
4.8	Associated Legendre Functions and Spherical Harmonics	212
4.8.1	Associated Legendre Polynomials	212
4.8.2	Orthogonality and Normalization of Associated Legendre Functions	214
4.8.3	Spherical Harmonics	217
4.9	Resources on Special Functions	218
	Exercises	219

Part III Partial Differential Equations

5	Partial Differential Equations in Cartesian Coordinates	229
5.1	One-Dimensional Wave Equations	230
5.1.1	The Governing Equation of a Vibrating String	230
5.1.2	Separation of Variables	232
5.1.3	Standing Wave	238
5.1.4	Traveling Wave	242
5.1.5	Nonhomogeneous Wave Equations	248
5.1.6	D'Alembert's Solution of Wave Equations	252
5.2	Two-Dimensional Wave Equations	261
5.2.1	The Governing Equation of a Vibrating Membrane	261
5.2.2	Vibration of a Rectangular Membrane	262
5.3	Three-Dimensional Wave Equations	267
5.3.1	Plane Wave	268
5.3.2	Particle Wave in a Rectangular Box	270
5.4	Equation of Heat Conduction	272
5.5	One-Dimensional Diffusion Equations	274
5.5.1	Temperature Distributions with Specified Values at the Boundaries	275
5.5.2	Problems Involving Insulated Boundaries	278
5.5.3	Heat Exchange at the Boundary	280
5.6	Two-Dimensional Diffusion Equations: Heat Transfer in a Rectangular Plate	284
5.7	Laplace's Equations	286
5.7.1	Two-Dimensional Laplace's Equation: Steady-State Temperature in a Rectangular Plate	287
5.7.2	Three-Dimensional Laplace's Equation: Steady-State Temperature in a Rectangular Parallelepiped	289
5.8	Helmholtz's Equations	291
	Exercises	292
6	Partial Differential Equations with Curved Boundaries	301
6.1	The Laplacian	302
6.2	Two-Dimensional Laplace's Equations	304
6.2.1	Laplace's Equation in Polar Coordinates	304
6.2.2	Poisson's Integral Formula	312
6.3	Two-Dimensional Helmholtz's Equations in Polar Coordinates	315
6.3.1	Vibration of a Drumhead: Two Dimensional Wave Equation in Polar Coordinates	316
6.3.2	Heat Conduction in a Disk: Two Dimensional Diffusion Equation in Polar Coordinates	322
6.3.3	Laplace's Equations in Cylindrical Coordinates	326
6.3.4	Helmholtz's Equations in Cylindrical Coordinates	331

6.4	Three-Dimensional Laplacian in Spherical Coordinates	334
6.4.1	Laplace's Equations in Spherical Coordinates	334
6.4.2	Helmholtz's Equations in Spherical Coordinates	345
6.4.3	Wave Equations in Spherical Coordinates	346
6.5	Poisson's Equations	349
6.5.1	Poisson's Equation and Green's Function	351
6.5.2	Green's Function for Boundary Value Problems	355
	Exercises	359

Part IV Variational Methods

7	Calculus of Variation	367
7.1	The Euler–Lagrange Equation	368
7.1.1	Stationary Value of a Functional	368
7.1.2	Fundamental Theorem of Variational Calculus	370
7.1.3	Variational Notation	372
7.1.4	Special Cases	373
7.2	Constrained Variation	377
7.3	Solutions to Some Famous Problems	380
7.3.1	The Brachistochrone Problem	380
7.3.2	Isoperimetric Problems	384
7.3.3	The Catenary	386
7.3.4	Minimum Surface of Revolution	391
7.3.5	Fermat's Principle	394
7.4	Some Extensions	397
7.4.1	Functionals with Higher Derivatives	397
7.4.2	Several Dependent Variables	399
7.4.3	Several Independent Variables	401
7.5	Sturm–Liouville Problems and Variational Principles	403
7.5.1	Variational Formulation of Sturm–Liouville Problems	403
7.5.2	Variational Calculations of Eigenvalues and Eigenfunctions	405
7.6	Rayleigh–Ritz Methods for Partial Differential Equations	410
7.6.1	Laplace's Equation	411
7.6.2	Poisson's Equation	415
7.6.3	Helmholtz's Equation	417
7.7	Hamilton's Principle	420
	Exercises	425
	References	431
	Index	433

Mathematical Methods for Engineers and Scientists 3
Fourier Analysis, Partial Differential Equations and
Variational Methods
