
Contents

1	Simple and Special Polyhedra	1
1.1	Spines of 3-Manifolds	1
1.1.1	Collapsing	1
1.1.2	Spines	2
1.1.3	Simple and Special Polyhedra	4
1.1.4	Special Spines	5
1.1.5	Special Polyhedra and Singular Triangulations	10
1.2	Elementary Moves on Special Spines	13
1.2.1	Moves on Simple Polyhedra	14
1.2.2	2-Cell Replacement Lemma	19
1.2.3	Bubble Move	22
1.2.4	Marked Polyhedra	25
1.3	Special Polyhedra Which are not Spines	30
1.3.1	Various Notions of Equivalence for Polyhedra	31
1.3.2	Moves on Abstract Simple Polyhedra	35
1.3.3	How to Hit the Target Without Inverse U -Turns	43
1.3.4	Zeeman's Collapsing Conjecture	46
2	Complexity Theory of 3-Manifolds	59
2.1	What is the Complexity of a 3-Manifold?	60
2.1.1	Almost Simple Polyhedra	60
2.1.2	Definition and Estimation of the Complexity	62
2.2	Properties of Complexity	67
2.2.1	Converting Almost Simple Spines into Special Ones	67
2.2.2	The Finiteness Property	70
2.2.3	The Additivity Property	71
2.3	Closed Manifolds of Small Complexity	72
2.3.1	Enumeration Procedure	72
2.3.2	Simplification Moves	74
2.3.3	Manifolds of Complexity ≤ 6	76

XII Contents

2.4	Graph Manifolds of Waldhausen	83
2.4.1	Properties of Graph Manifolds	83
2.4.2	Manifolds of Complexity ≤ 8	88
2.5	Hyperbolic Manifolds	97
2.5.1	Hyperbolic Manifolds of Complexity 9	97
2.6	Lower Bounds of the Complexity	100
2.6.1	Logarithmic Estimates	101
2.6.2	Complexity of Hyperbolic 3-Manifolds	103
2.6.3	Manifolds Having Special Spines with One 2-Cell	105
3	Haken Theory of Normal Surfaces	107
3.1	Basic Notions and Haken's Scheme	107
3.2	Theory of Normal Curves	110
3.2.1	Normal Curves and Normal Equations	110
3.2.2	Fundamental Solutions and Fundamental Curves	114
3.2.3	Geometric Summation	115
3.2.4	An Alternative Approach to the Theory of Normal Curves	119
3.3	Normal Surfaces in 3-Manifolds	123
3.3.1	Incompressible Surfaces	123
3.3.2	Normal Surfaces in 3-Manifolds with Boundary Pattern	126
3.3.3	Normalization Procedure	127
3.3.4	Fundamental Surfaces	134
3.3.5	Geometric Summation	135
3.4	Normal Surfaces in Handle Decompositions	138
4	Applications of the Theory of Normal Surfaces	147
4.1	Examples of Algorithms Based on Haken's Theory	147
4.1.1	Recognition of Splittable Links	148
4.1.2	Getting Rid of Clean Disc Patches	150
4.1.3	Recognizing the Unknot and Calculating the Genus of a Circle in the Boundary of a 3-Manifold	157
4.1.4	Is M^3 Irreducible and Boundary Irreducible?	160
4.1.5	Is a Proper Surface Incompressible and Boundary Incompressible?	163
4.1.6	Is M^3 Sufficiently Large?	166
4.2	Cutting 3-Manifolds along Surfaces	176
4.2.1	Normal Surfaces and Spines	176
4.2.2	Triangulations vs. Handle Decompositions	188
5	Algorithmic Recognition of S^3	191
5.1	Links in a 3-Ball	192
5.1.1	Compressing Discs and One-legged Crowns	192
5.1.2	Thin Position of Links	195

5.2	The Rubinstein Theorem	199
5.2.1	2-Normal Surfaces	199
5.2.2	Proof of the Rubinstein Theorem	203
5.2.3	The Algorithm	209
6	Classification of Haken 3-Manifolds	213
6.1	Main Theorem	213
6.2	The Waldhausen Theorem	216
6.2.1	Deforming Homotopy Equivalences of Surfaces	217
6.2.2	Deforming Homotopy Equivalences of 3-Manifolds to Homeomorphisms	218
6.3	Finiteness Properties for Surfaces	224
6.3.1	Two Reformulations of the Recognition Theorem	224
6.3.2	Abstract Extension Moves	227
6.3.3	First Finiteness Property and a Toy Form of the Second	228
6.3.4	Second Finiteness Property for Simple 3-Manifolds	231
6.4	Jaco–Shalen–Johannson Decomposition	240
6.4.1	Improving Isotopy that Separates Surfaces	241
6.4.2	Does M^3 Contain Essential Tori and Annuli?	245
6.4.3	Different Types of Essential Tori and Annuli	248
6.4.4	JSJ-Decomposition Exists and is Unique	261
6.4.5	Seifert and I -Bundle Chambers	264
6.4.6	Third Finiteness Property	271
6.5	Extension Moves	273
6.5.1	Description of General Extension Moves	273
6.5.2	Structure of Chambers	281
6.5.3	Special Extension Moves: Easy Case	286
6.5.4	Difficult Case	294
6.5.5	Recognition of Simple Stallings Manifolds with Periodic Monodromy	298
6.5.6	Recognition of Simple Stallings Manifolds with Nonperiodic Monodromy	303
6.5.7	Recognition of Quasi-Stallings Manifolds	307
6.5.8	Subdivision of Solid Tori	312
6.5.9	Proof of the Recognition Theorem	320
7	3-Manifold Recognizer	327
7.1	Computer Presentation of 3-Manifolds	327
7.1.1	Cell Complexes	328
7.1.2	3-Manifolds as Thickened Spines	330
7.2	Simplifying Manifolds and Spines	332
7.2.1	Coordinate Systems on Tori	332
7.2.2	Reduction of Cell Structures	334
7.2.3	Collapses	335

7.2.4	Surgeries	336
7.2.5	Disc Replacement Moves	343
7.3	Labeled Molecules	347
7.3.1	What is a Labeled Molecule?	347
7.3.2	Creating a Labeled Molecule	349
7.3.3	Assembling Seifert Atoms	351
7.4	The Algorithm	354
7.5	Tabulation	355
7.5.1	Comments on the Table	357
7.5.2	Hyperbolic Manifolds up to Complexity 12	358
7.5.3	Why the Table Contains no Duplicates?	360
7.6	Other Applications of the 3-Manifold Recognizer	362
7.6.1	Enumeration of Heegaard Diagrams of Genus 2	362
7.6.2	3-Manifolds Represented by Crystallizations with ≤ 32 Vertices	365
7.6.3	Classification of Crystallizations of Genus 2	367
7.6.4	Recognition of Knots and Unknots	370
7.7	Two-Step Enumeration of 3-Manifolds	371
7.7.1	Relative Spines and Relative Complexity	372
7.7.2	Assembling	377
7.7.3	Modified Enumeration of Manifolds and Spines	380
8	The Turaev–Viro Invariants	383
8.1	The Turaev–Viro Invariants	383
8.1.1	The Construction	383
8.1.2	Turaev–Viro Type Invariants of Order $r \leq 3$	386
8.1.3	Construction and Properties of the ε -Invariant	392
8.1.4	Turaev–Viro Invariants of Order $r \geq 3$	395
8.1.5	Computing Turaev–Viro Invariants	402
8.1.6	More on ε -Invariant	406
8.2	3-Manifolds Having the Same Invariants of Turaev–Viro Type	408
A	Appendix	421
A.1	Manifolds of Complexity ≤ 6	421
A.2	Minimal Spines of Manifolds up to Complexity 6	426
A.3	Minimal Spines of Some Manifolds of Complexity 7	454
A.4	Tables of Turaev–Viro Invariants	461
	References	481
	Index	489

Algorithmic Topology and Classification of 3-Manifolds

Matveev, S.

2007, XIV, 492 p., Hardcover

ISBN: 978-3-540-45898-2
