

# CONTENTS

|   |          |
|---|----------|
| <b>Introduction.....</b>  | <b>1</b> |
| 1. Organization of the text.....  | 1        |
| 2. Frontiers of organometallic chemistry.....   | 2        |
| 3. Situation of the book with respect to teaching .....   | 2        |
| 4. Reference books and other selected references.....   | 3        |
| <b>History of organometallic chemistry .....</b>  | <b>5</b> |
| 1760-1900: The first complexes.....   | 5        |
| 1900-1950: Grignard, Sabatier, and catalysis in Germany .....   | 6        |
| 1950-1960: The discovery of ferrocene and the boom of organometallic chemistry. 7                           |          |
| 1961-1981: The discovery of multiple metal-carbon bonds<br>and the golden age of catalysis .....            | 9        |
| 1970-1985: Activation of C-H bonds in hydrocarbons,<br>$\sigma$ -bond metathesis and $H_2$ as a ligand..... | 16       |
| Current trends.....   | 18       |

## PART I

### STRUCTURES OF THE TRANSITION-METAL COMPLEXES

|  |           |
|--|-----------|
| <b>Chapter 1 - Monometallic transition-metal complexes .....</b>   | <b>23</b> |
| 1. The ligands .....   | 23        |
| 2. The characteristics of the transition-metal in the complexes .....  | 32        |
| 3. Hapticity of the ligands and linear writing of the complex formulas.....  | 36        |
| 4. The “18-electron rule”: tendencies and exceptions .....   | 37        |
| 5. Bonding between the transition metal and the $\pi$ -acceptor ( $CO$ , $C_2H_4$ )<br>and $\pi$ -donor ligands (halogeno, alkoxy, amino)..... | 41        |
| 6. Molecular orbital diagrams .....  | 44        |
| Summary and Exercises.....   | 45        |
| <b>Chapter 2 - Bimetallic transition-metal complexes and clusters .....</b>  | <b>47</b> |
| 1. The metal-metal bond in bimetallic complexes .....  | 48        |
| Types of molecular magnetism .....   | 59        |
| 2. Clusters.....   | 60        |
| 3. The isolobal analogy.....   | 73        |
| Summary and Exercises.....   | 76        |

**PART II****THE STOICHIOMETRIC REACTIONS OF TRANSITION-METAL COMPLEXES****Chapter 3 - Redox reactions, oxidative addition and  $\sigma$ -bond metathesis..... 81**

|   |     |
|---|-----|
| 1. Outer-sphere electron transfer .....   | 81  |
| 2. Inner-sphere electron- and atom transfer .....                               | 85  |
| 3. Oxidative addition, reductive elimination and $\sigma$ -bond metathesis..... | 87  |
| Summary and Exercises.....  | 106 |

**Chapter 4 - Reactions of nucleophiles and electrophiles with complexes.....109**

|                                     |     |
|-------------------------------------|-----|
| 1. Nucleophilic reactions .....     | 109 |
| 2. Reactions of electrophiles ..... | 115 |
| Summary and Exercises.....          | 119 |

**Chapter 5 - Ligand substitution reactions.....121**

|  |     |
|--|-----|
| 1. Introduction .....  | 121 |
| 2. "Pairwise" mechanisms.....                                      | 121 |
| 3. Electron-transfer-chain and atom-transfer-chain mechanisms..... | 127 |
| 4. Substitution of $XL_n$ ligands ( $n = 0-2$ ) .....              | 132 |
| Summary and Exercises.....   | 133 |

**Chapter 6 - Insertion and extrusion reactions.....135**

|  |     |
|--|-----|
| 1. Introduction .....  | 135 |
| 2. CO 1,1 migratory insertion .....  | 136 |
| 3. Methylene insertion and extrusion .....   | 139 |
| 4. 1,2 migratory insertion of alkenes and alkynes into M-H bonds.....  | 140 |
| 5. Insertion of alkenes into metal-alkyl bonds and the reverse reaction:<br>C-C activation by $\beta$ -alkyl elimination ..... | 142 |
| 6. $\alpha$ and $\gamma$ -elimination.....   | 143 |
| Summary and Exercises.....   | 146 |

**PART III****THE MAIN FAMILIES OF ORGANOMETALLIC COMPLEXES****Chapter 7 - Metal carbonyls and complexes of other monohapto L ligands...151**

|   |     |
|---|-----|
| 1. Introduction .....   | 151 |
| 2. Syntheses.....   | 152 |
| 3. Binding modes.....   | 153 |
| 4. Reactions.....   | 159 |
| 5. Ligands isoelectronic to CO: CNR, CS, CSe, $N_2$ and $NO^+$ .....          | 162 |
| 6. Dioxygen $O_2$ .....   | 168 |
| 7. Phosphanes.....  | 168 |
| 8. Weak L ligands and their role to generate organometallic Lewis acids ..... | 171 |
| Summary and Exercises.....  | 172 |

|  |            |
|--|------------|
| <b>Chapter 8 - Metal-alkyl and -hydride complexes and other complexes of monohapto X ligands.....</b>                | <b>175</b> |
| 1. Different types of $sp^3$ metal-carbon bonds .....  | 175        |
| 2. Stability of metal-alkyl complexes .....  | 175        |
| 3. Synthesis of metal-alkyl complexes .....  | 179        |
| 4. Properties of metal-alkyl complexes.....  | 180        |
| 5. Metallocycles.....  | 181        |
| 6. Metal-aryl, -vinyl, -alkynyl, -silyl, and -stannyl complexes .....  | 182        |
| 7. Metal-hydrides and the dihydrogen ligand .....  | 184        |
| 8. Alkoxy and amido complexes .....  | 193        |
| Summary and Exercises.....   | 194        |
| <br><b>Chapter 9 - Metal-carbene and -carbyne complexes and multiple bonds with transition metals .....</b>          | <b>197</b> |
| 1. Metal-carbene complexes.....  | 197        |
| 2. Metal-carbyne complexes .....   | 215        |
| 3. Multiple bond between a heteroatom and a transition metal:<br>oxo, imido, phosphinidene and nitrido ligands ..... | 217        |
| Summary and Exercises.....   | 223        |
| <br><b>Chapter 10 - <math>\pi</math> complexes of mono- and polyenes and enyls.....</b>                              | <b>225</b> |
| 1. Metal-olefin complexes.....   | 225        |
| 2. Metal-diene complexes and analogues .....   | 228        |
| 3. Metal-alkyne complexes .....  | 231        |
| 4. $\pi$ -Allyl complexes .....  | 233        |
| 5. Polyenyl complexes .....  | 237        |
| 6. Arene complexes .....   | 242        |
| Summary and Exercises.....   | 248        |
| <br><b>Chapter 11 - Metallocenes and sandwich complexes .....</b>  | <b>251</b> |
| 1. Structure of the metallocenes .....   | 251        |
| 2. Redox properties of the sandwich metallocenes .....   | 255        |
| 3. Metallocene synthesis .....   | 256        |
| 4. Chemical properties of metallocenes.....  | 258        |
| 5. Triple- and multiple-decker sandwich complexes.....   | 266        |
| 6. Non-sandwich metallocenes derivatives.....  | 268        |
| 7. Metal-bis-arene sandwich complexes.....   | 270        |
| 8. Cyclopentadienyl-metal-arene complexes .....  | 274        |
| Summary and Exercises.....   | 287        |

|   |            |
|---|------------|
| <b>Chapter 12 - Ionic and polar metal-carbon bonds:<br/>alkali and rare-earth complexes .....</b> | <b>289</b> |
| 1. Introduction .....   | 289        |
| 2. Organometallic complexes of alkali metals .....  | 289        |
| 3. Grignard reagents .....  | 293        |
| 4. The scandium, yttrium, lanthanides and actinides complexes .....                               | 296        |
| Summary and Exercises.....  | 310        |

|   |            |
|---|------------|
| <b>Chapter 13 - Covalent chemistry of the organoelements<br/>of frontier (11, 12) and main (13-16) groups .....</b> | <b>313</b> |
| 1. Introduction .....   | 313        |
| 2. Group 11 (Cu, Ag, Au) .....  | 314        |
| 3. Group 12 (Zn, Cd, Hg).....   | 316        |
| 4. Group 13 (B, Al, Ga, In, Tl).....  | 320        |
| 5. Group 14 (Si, Ge, Sn, Pb) .....  | 328        |
| 6. Group 15 (As, Sb, Bi) .....  | 340        |
| 7. Group 16 (Se, Te).....   | 344        |
| Summary and Exercises.....  | 346        |

## PART IV CATALYSIS

|                                       |            |
|---------------------------------------|------------|
| <b>Introduction to catalysis.....</b> | <b>351</b> |
|---------------------------------------|------------|

|   |            |
|---|------------|
| <b>Chapter 14 - Hydrogenation and hydroelementation of alkenes.....</b> | <b>357</b> |
| 1. Hydrogenation of olefins .....                                       | 357        |
| 2. Asymmetric hydrogenation .....                                       | 360        |
| 4. Hydroboration of olefins .....                                       | 362        |
| 5. Hydrocyanation of olefins.....                                       | 362        |
| 6. Hydroamination of olefins and alkynes .....                          | 363        |
| Summary and Exercises.....  | 364        |

|  |            |
|--|------------|
| <b>Chapter 15 - Transformations of alkenes and alkynes .....</b> | <b>367</b> |
| 1. Ziegler-Natta-type olefin polymerization .....                | 367        |
| 2. Metathesis of alkenes, alkynes and cycloalkenes.....          | 373        |
| 3. Olefin dimerization and oligomerization .....                 | 386        |
| 4. Olefin isomerization .....                                    | 390        |
| Summary and Exercises.....                                       | 392        |

|   |            |
|---|------------|
| <b>Chapter 16 - Oxidation of olefins.....</b>   | <b>395</b> |
| 1. Historic introduction and radical-type oxidation.....  | 395        |
| 2. Ethylene oxidation to acetaldehyde: Wacker process.....  | 396        |
| 4. Epoxidation of olefins.....  | 399        |
| 5. Hydroxylation by metal-oxo complexes.....  | 402        |
| 6. Phase-transfer catalysis in oxidation chemistry .....  | 405        |
| Summary and Exercises.....  | 407        |
| <b>Chapter 17 - C-H activation and functionalization of alkanes and arenes.....</b>                           | <b>409</b> |
| 1. Introduction .....   | 409        |
| 2. Alkanes and cycloalkanes .....   | 410        |
| 3. Aromatics .....  | 419        |
| Summary and Exercises.....  | 428        |
| <b>Chapter 18 - Carbonylation and carboxylation reactions .....</b>   | <b>431</b> |
| 1. Carbonylation of methanol: Monsanto process.....   | 431        |
| 2. Olefin hydroformylation: oxo process.....  | 433        |
| 3. Carbonylation of alkenes and alkynes in the presence of a nucleophile:<br>the Reppe reaction .....         | 434        |
| 4. Carbonylation of aryl halides in the presence of a nucleophile .....                                       | 436        |
| 5. Catalysis of CO <sub>2</sub> transformation.....   | 437        |
| Summary and Exercises.....  | 438        |
| <b>Chapter 19 - Bio-organometallic chemistry: enzymatic catalysis.....</b>                                    | <b>441</b> |
| 1. Introduction .....   | 441        |
| 2. Cobalamin: co-enzyme vitamin B <sub>12</sub> .....   | 442        |
| 3. Biological redox mediators .....   | 445        |
| 4. Examples of oxido-reductase enzymes: the mono-oxygenases .....   | 446        |
| 5. Nitrogen fixation by nitrogenase enzyme .....  | 448        |
| 6. Nickel enzymes .....   | 452        |
| Summary and Exercises.....  | 455        |
| <b>Chapter 20 Heterogeneous catalysis .....</b>   | <b>457</b> |
| 1. Introduction.....  | 457        |
| 2. Concepts of heterogeneous catalysis .....  | 460        |
| 3. CO and CO <sub>2</sub> hydrogenation and Fischer-Tropsch chemistry.....                                    | 469        |
| 4. Transformation of hydrocarbons.....  | 475        |
| 5. Metathesis of alkanes, alkenes and alkynes.....  | 477        |
| 6. Oxidation of hydrocarbons .....  | 480        |
| 7. Nanoparticle catalysis: the fast growing frontier<br>between homogeneous and heterogeneous catalysis ..... | 483        |
| Summary and Exercises .....   | 485        |

**PART V****APPLICATIONS IN ORGANIC SYNTHESIS**

|  |            |
|--|------------|
| <b>Chapter 21 - Organometallic complexes in organic synthesis</b>  |            |
| <b>Examples of applications.....</b>   | <b>489</b> |
| 1. Protection and stabilization of unsaturated organic derivatives and fragments .   | 489        |
| 2. Nucleophilic and electrophilic reactions on hydrocarbon ligands .....   | 492        |
| 3. General methods of C-C bond formation<br>using the oxidative addition of an organic halide or a related electrophile .....              | 497        |
| 4. Extension of palladium catalysis to the formation of C-O and C-N bonds .....  | 516        |
| 5. Oxidative coupling reactions of alkynes with other unsaturated fragments<br>for the formation of cyclic and heterocyclic compounds..... | 518        |
| 6. Metal-carbene complexes in organic synthesis .....  | 521        |
| 7. Examples of asymmetric catalysis.....   | 523        |
| Summary and Exercises.....   | 530        |
| <b>Answers to exercises .....</b>  | <b>535</b> |
| <b>References.....</b>   | <b>553</b> |
| <b>Abbreviations .....</b>   | <b>591</b> |
| <b>Index .....</b>   | <b>595</b> |
| <b>Atomic weights of the elements.....</b>   | <b>609</b> |
| <b>Periodic table of the elements .....</b>  | <b>611</b> |

Organometallic Chemistry and Catalysis

Astruc, D.

2007, XII, 608 p., Hardcover

ISBN: 978-3-540-46128-9
